The sidecarist, if he has chosen his equipment with care regarding weight and bulk, will have no difficulty in finding accommodation for a complete camp outfit for two on his luggage carrier and in the sidecar locker. There is no need to buy experience in the shape of a ruined tent if care is taken to protect it against the effects of vibration. An old suitcase serves as a protection, and ought to hold both tent and sleeping gear. If occasionally the tent or flysheet has to be packed while still damp it should be carried outside the case, but strapped in such a manner that no part is subject to wear under vibration. As far as possible it will be found advisable to carry all equipment on the sprung portion of the sidecar, but *not*, of course, in the sidecar toe. The locker of the B.S.A. sidecar and similar outfits will take a full equipment for a camping pair. Needless to say, such articles as plates and cups should be packed as tightly as possible by wrapping them in soft paper serviettes or in the tea cloths. It will be found convenient to use rubber rings cut from an old inner tube to secure small items, if they are not to produce a travelling orchestra.

For the solo camper the problem is entirely different, and bulk assumes much greater importance. While the total weight of a solo camp outfit is only a few pounds, it is well to follow the lead of the designer of the Scott motor cycle and dispose of this weight as near the ground as possible. The stove reservoir should be clipped to the frame or packed in a special box *outside* the picnic outfit. For carrying the picnic outfit, a flexible telescopic bag or Japanese rush basket, the sides of which adapt themselves somewhat to the shape of the contents, will be found much more satisfactory than a stiff basket or fibre case. The art of packing neatly is quickly acquired if some thought and practice is given to rolling and cording the tent and sleeping bag before taking to the road. Yachtsmen with experience of a small boat will have little to learn.

Choice of Suitable Sites.

More enthusiasm for the joys of light-weight camping has been damped out by bad site selection, perhaps, than for any other reason. The rules of the game are easily acquired by campers who are keen and observant. The lightweight camper needs drinking water, shelter from wind, actual or possible, and turf of a quality to provide a grip for his pegs. Little else is essential, but if in addition he can secure a wide view, a bathing place and running water near at hand —then is the cup of his happiness filled to overflowing. Discovering these conditions eventually becomes an instinct, but an ordnance map will indicate the possibility of shelter, of running water and high ground. Ground likely to be flooded at any time of

Camping with a Sidecar.—

the year should be avoided, of course, and also overhanging trees. A slight slope away from the sheltering rocks or trees and towards the view is sought after, in what the estate agent would call "a most desirable site."

In England it is generally advisable to camp on private land with the permission of the tenant or landlord—a much easier matter than non-campers frequently suppose. In over twenty years of camping in all parts of Britain, the writer remembers only one point-blank refusal, and that was from a farmer angry because, in approaching the house, our engine had disturbed his game. It is important to convince the farmer or land owner at once that you genuinely share his anxiety about crops, cattle and closed gates. If, in addition, you can interest him in the camping game, and make him curious to see how a tent that rolls into next to no space can provide adequate shelter for two or three people, your case is won. Point out the stove, promise not to light fires without permission and to leave the site as clean as when you entered it, and you will find that farmers and land owners are quite reasonable and even sympathetic folk. It is for campers themselves to see that they do not abuse the trust, and so foul their own nest.

Members of the A.C.U. can now obtain from the Union headquarters particulars of camping sites throughout Britain. This is a useful innovation, but the list may be extended by personal experiment.

Recommended Areas.

Camp touring is possible almost anywhere in the British Isles that motor cyclists penetrate. There is a string of camp sites along the south coast, and in the West Country. Mountainous or hilly country, where there are swift-flowing streams and uncultivated land, forms the ideal ground of motor cycle campers. Ullswater and Borrowdale, in the Lake District, Dolgelley and the Gwynant Valley in North Wales, the Yorkshire Dales and along Lomondside provide examples. For its wide choice of glorious sites the Highlands of Scotland cannot be equalled in Britain.

When motor cyclists learn what enchanting holiday playgrounds await their mastery of camping, we shall have waiting lists for permits to camp on the better sites. Meanwhile the pioneers can find considerable joy in blazing the trail into some of the more remote beauty spots of Britain.

HENRY J. STONE,
Author of "Camp Touring and Light-weight Camping."

A well sheltered site for the week, showing two types of tents suitable for motor cycle camping.

CAUSES OF STREET ACCIDENTS.

DURING a recent inquest held by the City Coroner the fact was disclosed that in the first quarter of this year there were as many as 130 fatalities in London alone caused by street accidents, many of which were, in his opinion, unnecessary and preventable. With the present increase of motor traffic of all kinds it is certain that more care will have to be taken both by pedestrians and drivers alike. Far too many accidents are caused through people stepping into the roadway before making sure that the way is clear, and although the motorist is so frequently blamed for the sometimes inevitable accident which follows, he is often by no means guilty of negligence. Time and again accidents have been caused by cyclists turning in the road without any proper warning to oncoming traffic, and this applies very strongly to deaf cyclists. It has been suggested in various quarters that persons afflicted in this way should carry some distinctive mark to warn other drivers, an idea that would, without doubt, avert many disasters.

Passenger Machine Topics

By Friar John.

Which Side for the Sidecar? Watch Police Signals. Where can Sidecars be most Improved?

MR. MORTIMER BATTEN raised a hornets' nest when he contended that the right side of the machine was best for the sidecar. Judging on evidence from both sides, the obvious summing-up should be in favour of the existing method. Not having driven a machine with the sidecar attached on the right-hand side one can only theorise, whereas Mr. Batten speaks from experience of both methods. "Safety First," however, stated the case clearly in the issue of July 20th, and his argument should be sufficient to convince anyone that the left side is the safer side on which to fix the sidecar, for driving in traffic at any rate. Anyone who rides on busy roads cannot help but agree. "One great fault," says "Safety first," "of all left-hand drives is the enormous danger present when a left-hand driven machine is overtaking and wishes to pass a heavy vehicle which is travelling slowly and completely obliterating the view of traffic coming in the opposite direction. To overtake the other vehicle the driver of the left-hand machine must swing out nearly his whole width beyond the rear off side of the vehicle he is passing before he can even see if there is any vehicle coming in the opposite direction. On narrow roads the danger in doing this is very acute with modern fast motor traffic, and even on wide roads there is considerable danger."

The extreme care that has to be exercised in passing slower moving vehicles on roads near cities makes it imperative that nothing should be done to add to that danger. I think this argument alone counter-balances the points brought up in favour of the right-hand sidecar.

◈ ◈ ◈ ◈

REPLYING to a recent article entitled "Runabout and Sidecar," by A. F. J., "Rayon de Soleil," in the correspondence columns, says the author appears to be willing to make the best of the present-day sidecar outfit, and "Rayon de Soleil" objects to A. F. J.'s assumption that the desire which comes to all sidecarists sooner or later for more comfort is "merely a passing affliction like measles."

Making "the best of things" is often retrograde policy, and so is the spirit of compromise—sometimes. Yet either may be virtuous on occasions. Whether A. F. J. is a hero or coward in making the best of "bumping and banging" sidecars, to use "Rayon de Soleil's" words, I am not sure. I dare say he could have shouted from the housetops that all sidecars need spring frames and air cushions, but probably, like the rest of we ordinary mortals, he took the line of least resistance. In not embodying in his article a vindictive, slashing criticism of sidecar outfits, he evidently missed an opportunity of pleasing "Rayon de Soleil" and maybe thousands of others who are sick of being shaken to pulp on bumpy roads.

◈ ◈ ◈ ◈

TALKING to a manufacturer of sidecars recently I gathered that he thought his productions as near perfection as possible. The remark invited an attack, but this particular maker is such an enthusiast and has made such great efforts at improving his models that I had not the heart to offer adverse criticism. As a matter of fact, the criticism I could have offered would have applied to nearly every sidecar, and not to this make in particular.

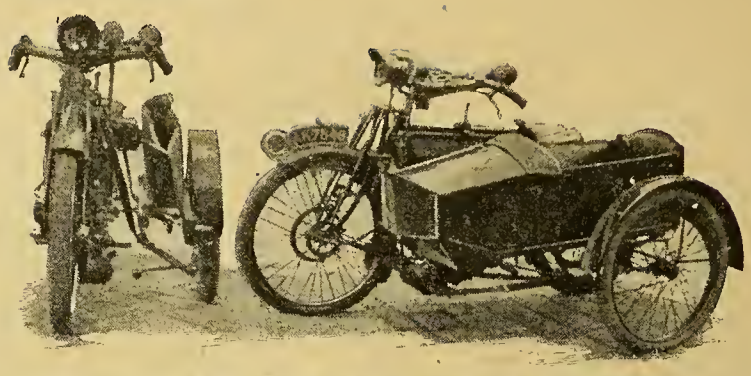
It would be easy to tabulate what I think the greatest failings in the present-day sidecars. But instead I will ask readers where they think there is most room for improvement in sidecars. Purely destructive criticism is often readable, but suggested remedies for failings are what we all desire. Where *can* sidecars be most improved?

◈ ◈ ◈ ◈

SIDECARISTS on tour—or not on tour for that matter—beware of the signals of policemen on point duty. Curb your haste to get along, and do not be fooled by a signal that is not clear to you. Sooner *stop* in error than *proceed* in error. I need not recount a recent happening, sufficient it is that one has to obey the law—as it is laid down at

Passenger Machine Topics.—

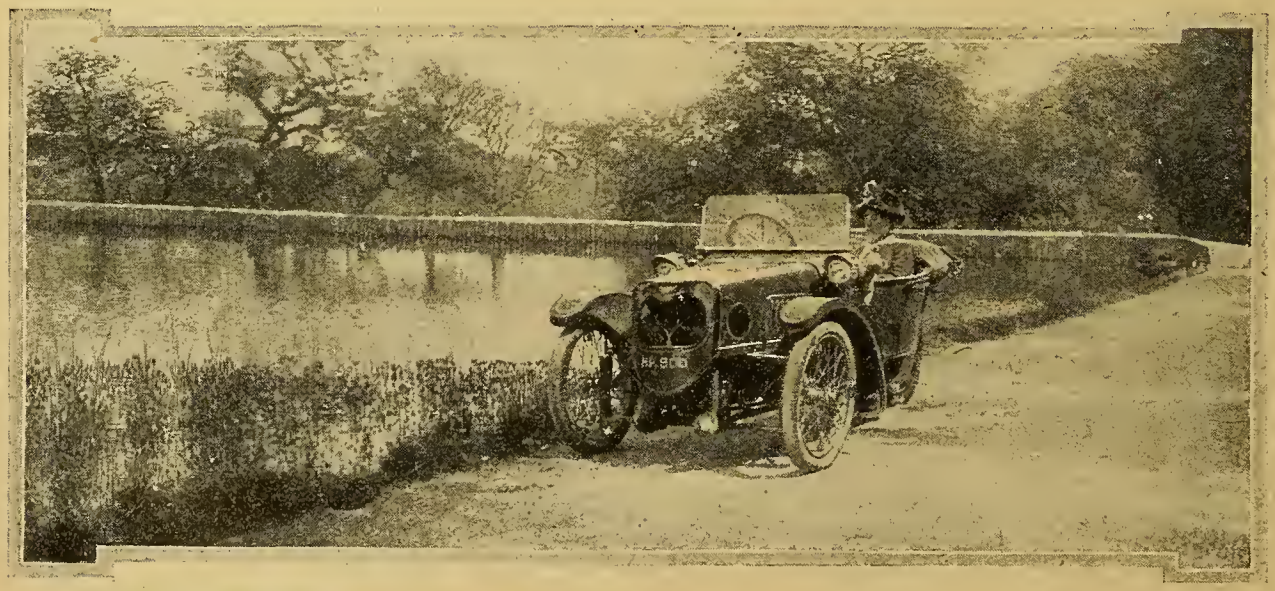
street corners. And if you interpret a slovenly waving of the arm for you to proceed to cut across a main thoroughfare, when the waving is meant for the other man to proceed along the main thoroughfare, then do not be surprised at what follows at the right angle. Watch the signals.



FOLDS RIGHT UP! Folding sidecar chassis are not uncommon, but a collapsible *body and chassis* certainly contains an element of novelty. An outfit embodying this feature is now being tried on the road by its designer, Mr. Edward Bracewell, 12, Greengate, Keighley, and so far has proved satisfactory. The chassis is constructed of spring steel and, excepting the detachable bottom, the body is also of steel.

MOTOR cycle camping can no doubt be thoroughly enjoyable. I have promised myself a long camping holiday many times, once going so far as to take a small tent and a few blankets with me on a tour. But I must admit they were never used. Curiously enough, near all the spots where we decided to stay there happened to be an inn or hotel, and one went there of course for dinner or tea (call it what you like) before erecting the tent. While dining in the ancient oak-panelled room with its old sporting prints and engravings, or maybe in the other sort of room with its hair-stuffed sofa and "Battle of Waterloo," we discussed the pros and cons of tent erecting, generally finishing the specious arguments whilst on a stroll round the village, always agreeing that it was "not worth the bother" considering we should be striking camp early next morning. The same old pros and cons were brought up and discussed each day, and the ending was always the same—a wretched admission, no doubt. But, some day I am going to do the thing properly. That is, I am going to persuade two other owners of sidecars—who are temperamentally fitted for the job, of course—to make up a party. Luggage could then be divided and the work of erecting and cooking divided. The only thing that would not have to be divided would be opinion.

STEERING a sidecar for the first time is usually a disconcerting experience, especially if one has driven a solo machine for any length of time. Quite recently I saw a sidecar driver steer directly into a hedge instead of taking a left-hand bend in the road. A more stupid happening one could not imagine. Afterwards I conversed with the owner, who luckily had suffered no damage either to himself or outfit. He said he had only just taken up sidecarring, but had ridden a solo machine for many years, and could not account for his lapse. Of course, one steers almost subconsciously on a two-wheeler, and a decided and conscious effort in turning the handle-bars is not noticed. But there is little excuse for such a lapse as that described, even though this subconscious steering had become an ingrained habit. Possibly the real reason for the accident was the age-old fear of the sidecar wheel lifting; a week or two on three wheels and one gets over this.

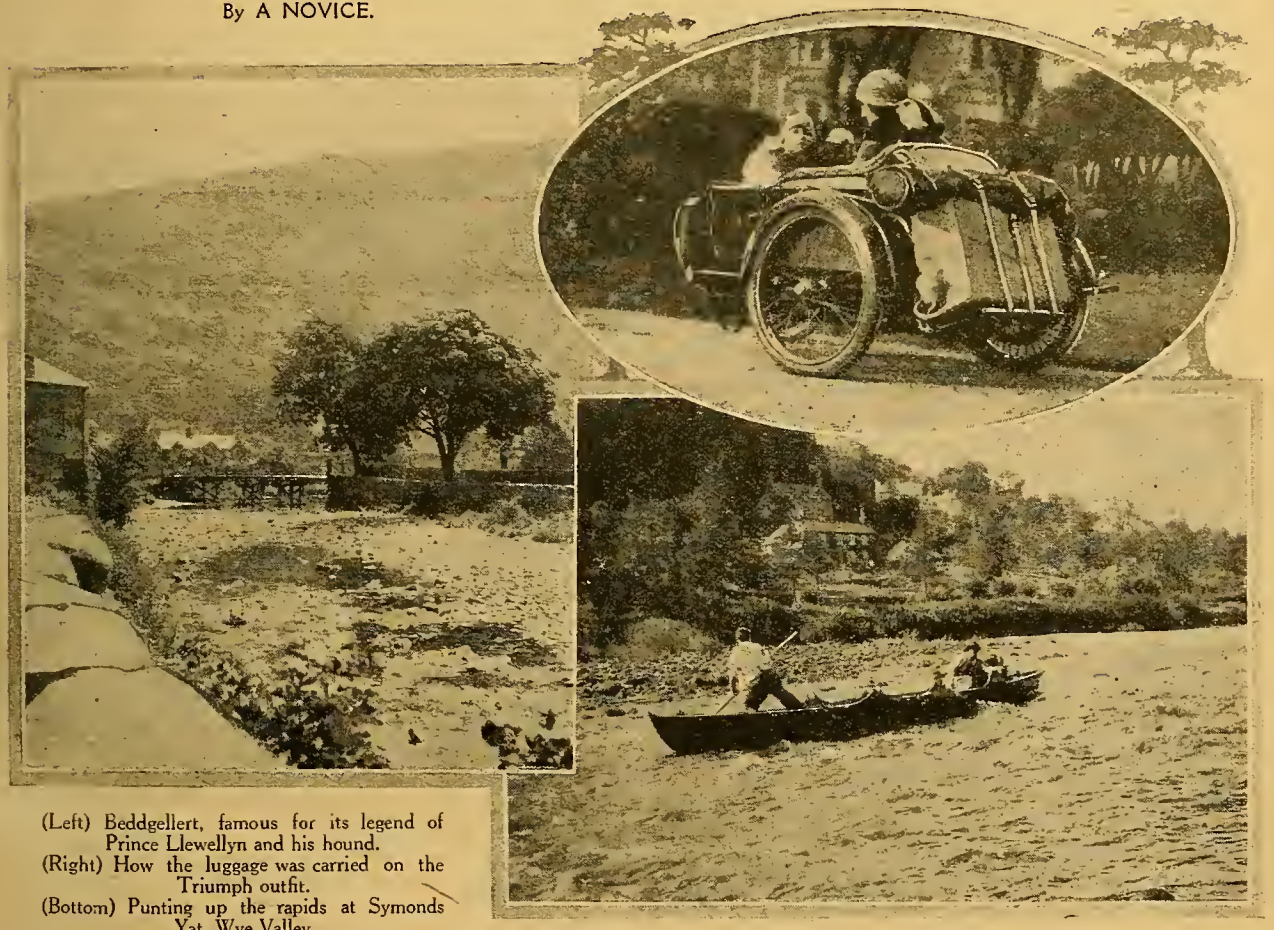


A pretty scene not many miles from the heart of Birmingham. This peaceful retreat is in Sutton Park an open expanse of many acres to the north of the great Midland city.

A 1,000 MILE HOLIDAY FOR £20.

Economy and Freedom on a Sidecar Tour for Two—with a Little Refrain on Trouble-free Riding.

By A NOVICE.



(Left) Beddgellert, famous for its legend of Prince Llewellyn and his hound.
(Right) How the luggage was carried on the Triumph outfit.
(Bottom) Punting up the rapids at Symonds Yat, Wye Valley.

THE slump, low funds, and little possibility of the latter increasing made the question of a holiday something of a problem. It became a question of how much one could do for a certain sum—and that sum a very limited one.

How much would it cost to travel by train to South Wales *via* Oxford and the Wye Valley, up to North Wales, then back to London *via* Chester, Buxton, Derby, Stratford-on-Avon, and Oxford? Trying to work it out resulted in the conclusion that at present rates such a tour would be impossible except for multi-millionaires, but by providing my own transport the trip was actually done by two people for less than £20, including all hotel expenses, smokes, pin money, and an occasional round of golf.

A Faithful Single.

I happen to be the proud possessor of an all-chain drive 550 c.c. Triumph sidecar—one of the first, I believe—and this fact, of course, solved our problem at once.

Starting from London, three up, two suit cases and two bags of golf clubs, we ran to Oxford comfortably in three hours by way of Staines, Runnymede, Windsor, and Henley, by far the prettiest route. At Oxford the third and smallest passenger was dropped for a stay of ten days with friends, and on the following day my wife and I continued the journey with the idea of reaching Ross-on-Wye for the night. Starting at about 10 a.m., we travelled by way of Woodstock, Broadway—the most delightful old-world village in the kingdom—and Worcester, spent a couple of hours on the Malvern Hills, and ran into Ross about six. "Big" hotels were "taboo," and we finally fixed up at a little inn where we were most comfortable. We then prospected for the golf course, and, having found—and approved—it, turned in.

Next morning we played a round of golf and settled our modest account (15s. for bedroom, supper, and breakfast). Our inclination then ran in the direction of Hereford, *via* Symonds Yat, the Wye Valley, Chepstow, and back again, and it was our intention to spend the next night at Hereford. We were, however, persuaded to spend some hours on the Wye at Symonds Yat, a truly glorious spot, and, with the aid

A 1,000 Mile Holiday for £20.—

of a most entertaining boatman, went some distance down the river and back over the rapids.

The boatman offered me £10 if I could punt the boat up the rapids, but many, having flattered themselves as to their prowess in this, had failed, so I thought discretion the better part of valour and took a photograph instead.

By this time it was about five o'clock, and after tea we proceeded through the most delightful scenery to Chepstow, *via* Tintern Abbey, and, having given up all hope of getting to Hereford, discovered a beautiful little village on the Wye called Redbrook, where we stayed with the postmaster, a delightful person.

Along the Welsh Borderland.

We were now badly behind schedule, and it behoved us to get a move on next day; the necessity for so doing, however, did not make us leave this little bit of heaven before 10.30 a.m., but when we started we moved and ran right through to Bettws-y-coed in the day, stopping to see Hereford Cathedral, and to admire the delights of Leominster, Ludlow, Shrewsbury, and the country round Llangollen. At the latter place a house called "The Maids of Llangollen's House" is worth a visit, the exterior carving being marvellous.

So far no punctures, no bursts, no spanner used; just oil and petrol.

We stayed on the top of the Conway Falls, just outside Bettws, at a little house of great reputation—if the visitors' book may be taken as a guide—for two days, during which time we visited Colwyn Bay, Llandudno, and the surrounding country, and on the eve of the second day got out the map to see where to go next. Criccieth struck us as just our mark, so off we went next morning through "Snowdonia," our first call being Beddgellert, then down the Aberglaslyn Pass to Tremadoc and Criccieth. Truly the Prime Minister has chosen a delightful spot for his leisure moments; we spent three days basking in the sunshine, enjoying the wonderful bathing and playing golf.

We visited Pwllheli and rounded the point to Nevin and Trevor, but came back to Criccieth in the end. We reluctantly left Criccieth to go *via* Carnarvon, Llanberis, Capel Curig, and Rhyl to Prestatyn, but being unsuccessful in getting accommodation there we pushed on towards Chester, and finally stayed in the mining district at a little village called Mostyn. Not being used to this sort of country, we got out of it early next morning, spent a few hours in Chester, and then away over the moors to Buxton. After Buxton and Bakewell we left the main road to go to Chesterfield and Baslow, intending to spend the night at Matlock. On arriving we found we had landed in the middle of an agricultural show, but after endless enquiries managed to get in at a farm where we were made most comfortable.

The Recurring Refrain.

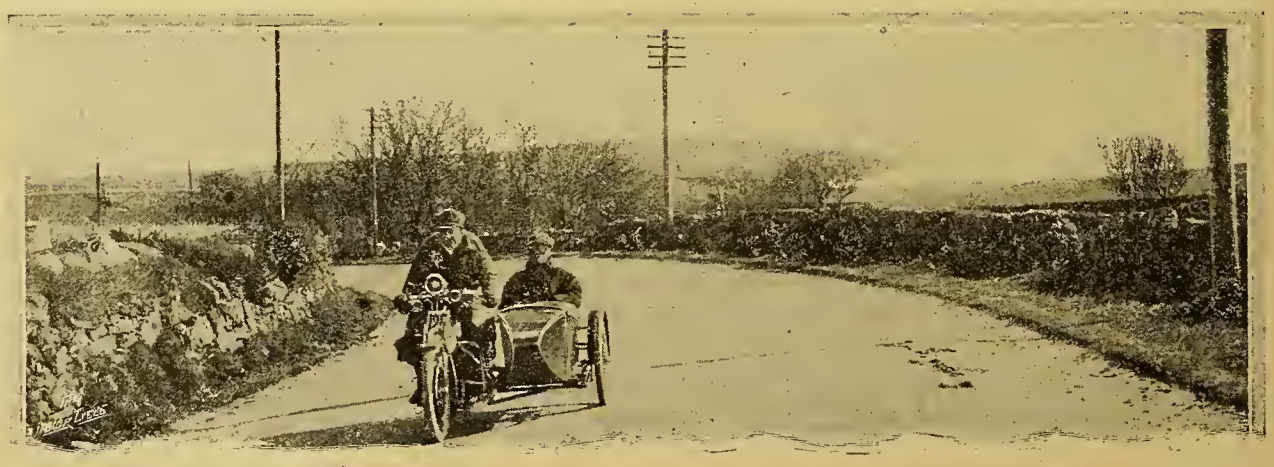
So far no puncture, no burst, no spanner used; just oil and petrol.

Our next stage was to Stratford-on-Avon, passing through Lichfield, where we visited the Cathedral. This proved an easy run, and we arrived in time to run out to Anne Hathaway's cottage. Next morning was spent looking round Stratford, but time was short, and our holiday was drawing to an end. The run to Oxford from Stratford presented no difficulties, we picked up our third passenger and turned for the last lap.

The run back to London was an easy one, and the road perfect all the way.

We had started out on a Saturday morning and returned on Sunday, fifteen days later. Two week-ends had been spent at Oxford, but the rest of the time we were on the road.

On arriving home our speedometer showed that 1,012 miles had been covered, and our expenses, including every conceivable item, came to under £20, a fraction of the cost of what the journey by rail would have been; but "comparisons are odious," and to compare a "bike" with a train, well! Right up to the end of the trip there was no puncture, no burst, no spanner used—all the machine wanted was just oil and petrol.



SCOTIA'S VARIED CHARM. Scotland is not composed entirely of mountain passes and rugged glens. From Stonehaven to Aberdeen a wide finely surfaced road runs over undulating country; and glimpses of the grey North Sea compensate one for the lack of lochs and bens.

SIMPLICITY IN SIDECAR DESIGN.

An Improved Model of the Holt Patent Spring Wheel Chassis. Left or Right-hand type at Will.

TO the man of moderate means, the sidecar outfit of "4 h.p." and under offers a real solution of his transport problems.

The essentials demanded by sidecarists of this type are comfort, cheapness, and light weight, coupled with strength; to satisfy all these demands is not too easy a task, but so far as the sidecar itself is concerned, the Holt Motor Manufacturing Co., of Albany Road, Earlsdon, Coventry, have gone a long way towards this end.

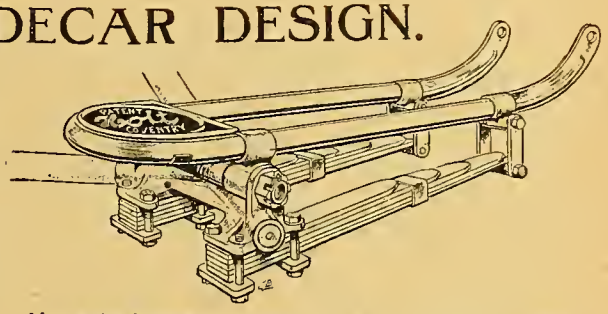
The chassis we illustrate is a modification of, and in many ways an improvement on, a previous production, and, while the principle remains the same, the construction is greatly different. One tube only now forms the chassis; this is bent into the form of an equilateral triangle, the two ends being joined by a single lug, which forms also the housing for the springs upon which the wheel is suspended. Mounted on this housing is the bearing for the wheel fork, a hollow axle acting as an oil reservoir.

The wheel springing is almost unchanged and is in every way efficient. It will be noticed, however, that the wheel fork is upswept at the rear to give a lower chassis position. The mudguard is attached direct to the knock-out spindle while its forward end is supported by a spring clip to the wheel fork; thus in no way does it interfere with the removal of the wheel when tyre repairs become necessary. The body is supported on three coil springs operating through levers; by this system the body is at all times upright and free from side sway. Either three or four points of attachment may be employed.

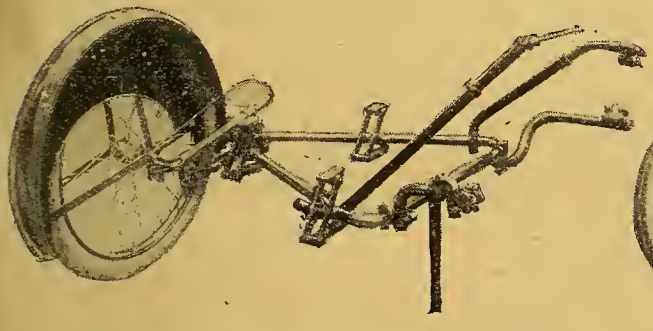
It will interest Continental and Colonial readers especially that the wheel fork and spring unit may be reversed and the chassis mounted on the right-hand side of the machine without obtaining additional parts.

Simplicity is the keynote of the Holt chassis; including the wheel fork and three-point connections to the motor cycle, six tubes only are employed in the entire construction. The body will be of the semi-sporting type of ample dimensions to give comfort, while appearance will not be forgotten.

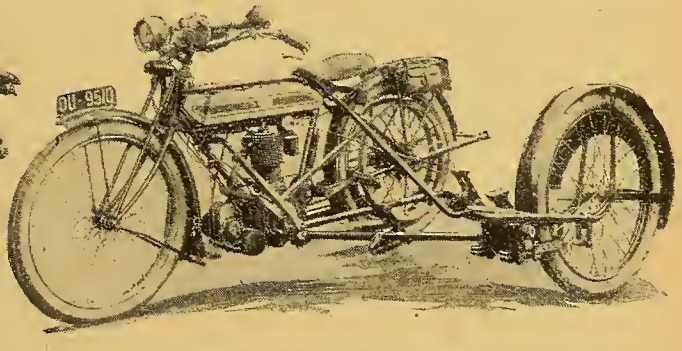
After an extended test on the road we are able to speak highly of the behaviour of the sidecar. It gives a degree of comfort hitherto associated only with the larger and far heavier outfit, while the light weight makes high average speeds possible even when used with a low-powered machine. The action of the wheel leaves nothing to be desired, nor is there any lack of lateral rigidity. Deliveries commence immediately, various models complete with bodies being priced at £21 and upwards.



New spring housing and upswept wheel fork of the Holt chassis. A neat step is fitted into the bend of the fork.



Although stoutly constructed and possessing great strength, an excellent impression of its light weight is gained from this view.



Low manufacturing costs and interchangeability of parts are feature of the Holt chassis.

FROM THE FOREIGN MAIL.

British Mount Wins Swedish Race.

In recent Swedish races over a distance of 250 km. (156 miles), an O.K. Junior finished first.

Mont Cenis Hill-climb.

Such a hill climb as can never take place in this country was held on the Mont Cenis recently. The course is fourteen miles long of continuous gradient, mounting in zig-zags, and no steeper than 1 in 9-10.

In the 350 c.c. class, Rossi (Motosacoche) was first, time 23 min. 47⅗sec. In the 500 c.c. class, Jolly (Alcyon), 22 min. 34⅕ sec.; Léoni (Della Ferrara), 22 min. 58⅖ sec.; Peracchio (Galloni), 27 min. 7⅘ sec. In the 1,000 c.c. class, Mancini (Indian) was the winner, time 20min. 40⅖sec., beating the former record created by the late Biaggo Nazzaro, whose time was 21 min. 25 sec.

A Good Place for the Generator.

A French contemporary suggests that in the case of a twin-cylinder the acetylene generator may be clipped to an exhaust pipe. This is not at all a bad idea, and it should be useful in the winter time, as in such a position the water could not freeze.

Speed Trials in Spain.

A flying kilometre speed trial was recently organised by the Royal Spanish Motor Cycle Club. The fastest time in each class was as follows:—

250 c.c.: Bourbon (225 Enfield), 68.25 km.p.h. (42½ m.p.h.).
500 c.c.: Lucos (496 Zenith), 95.5 km.p.h. (59½ m.p.h.).
750 c.c.: Blanco (582 Indian), 98.9 km.p.h. (61½ m.p.h.).
1,000 c.c.: Fuentes (989 Harley-D.), 139.5 km.p.h. (87 m.p.h.).
1,000 c.c. Sidecars: Maure (989 Harley-D. sc.), 120 km.p.h. (78 m.p.h.).

Examination for Driving Licences.

Before granting driving licences to motor cyclists, the Queensland Traffic Department has decided that a test will have to be passed. A letter has been written by the Department to the Queensland Motor Cycle Club asking for a suggestion for a practical examination to be given to applicants which would be suitable for all classes of machines.

A Close Race.

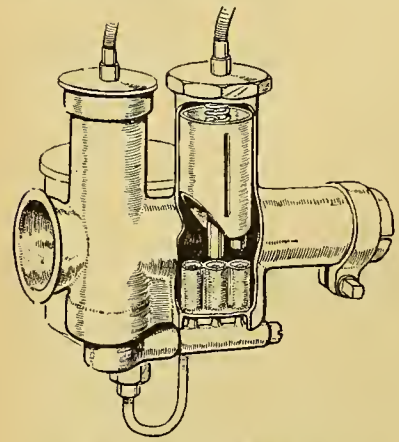
The 300 miles National Championship Race, at Wichita, Kansas, held on the 4th of last month, was won by R. Hepburn on a 998 c.c. Indian, his time being 4h. 18m. 54s. Higley gained second place riding a 998 c.c. Harley Davidson, his time for the distance being 4h. 37m., beating Kreiger who finished third with a 998 c.c. Indian by only 30 seconds.

DEVELOPMENTS IN CARBURATION.

Three-jet, Two-lever Instrument.

OF all the many details connected with petrol engines perhaps the carburetter receives the most attention at the hands of designers.

In the past few weeks we have had no less than four experimental instruments on test, and each of these has given good results in its own particular sphere. By this we mean that one carburetter may be designed as a single lever instrument for normal touring purposes, and functions admirably as such; another is turned out to give maximum power and acceleration at the expense of automaticity and petrol consumption; and a third is designed particularly with the idea of giving good all-round results, but particular stress is laid on low petrol consumption. The two-lever instrument under review comes into the last mentioned category.



"Cut-away" view of the Reece carburetter, showing the arrangement of jets, shrouds and dampers.

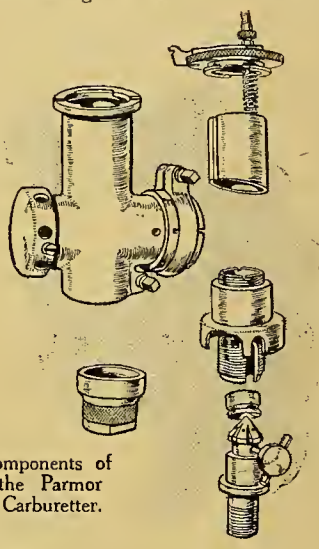
As will be seen from the sketch, which is self-explanatory, there are three jets placed in line. All three are shrouded by tubes, and the two nearest the engine are prevented from coming into action until the throttle is partially opened by small tubes which coincide with the shrouds; these tubes are carried in the throttle barrel.

In action, as soon as the throttle is slightly opened the rearmost jet is opened up, and with this fuel supply it is possible to attain a speed of approximately 25 miles per hour; when the throttle is raised slightly further the foremost jet comes into action, and still further movement opens up the middle jet. An air slide is mounted in a second barrel behind the throttle chamber; a slot in the throttle barrel is engaged by a set pin in the outer casing of the mixing chamber, so keeping it in its correct position.

It is claimed by the inventor that petrol consumption up to 120 m.p.g. can be obtained regularly with a 500 c.c. engine, and as far as our tests have proceeded we should judge that the claim is accurate, although, since the model we are testing is a hand-made experimental instrument not easily tuned to varying machines, it is difficult to arrive at accurate results. Nevertheless, the carburetter gives excellent slow running and acceleration, and is almost automatic in action, the consumption being particularly good. The carburetter is the design of Mr. J. R. Reece, 63, Henry Street, Ashted, Birmingham.

Floatless Single-lever Carburetter.

A FLOATLESS single lever carburetter, somewhat of a novelty, is being produced in Birmingham by Parmor Carburetters, Ltd., Carlton House Extension, Birmingham. Known as the "Parmor No. 2," the carburetter under examination has several features of interest. First, it is of the floatless type, the spraying nozzles being covered by a conical cap when the machine is at rest. Suction of the engine raises this cap and permits the mixture to be drawn into the carburetter body, its outlet to the engine being controlled by a normal piston throttle. In addition to a rotatable air inlet which may be closed for starting purposes, there are two main adjustments, (1) a tap controlling the amount of fuel which reaches the jet, and (2) a screw-down adjustment limiting the lift of the jet covering valve.



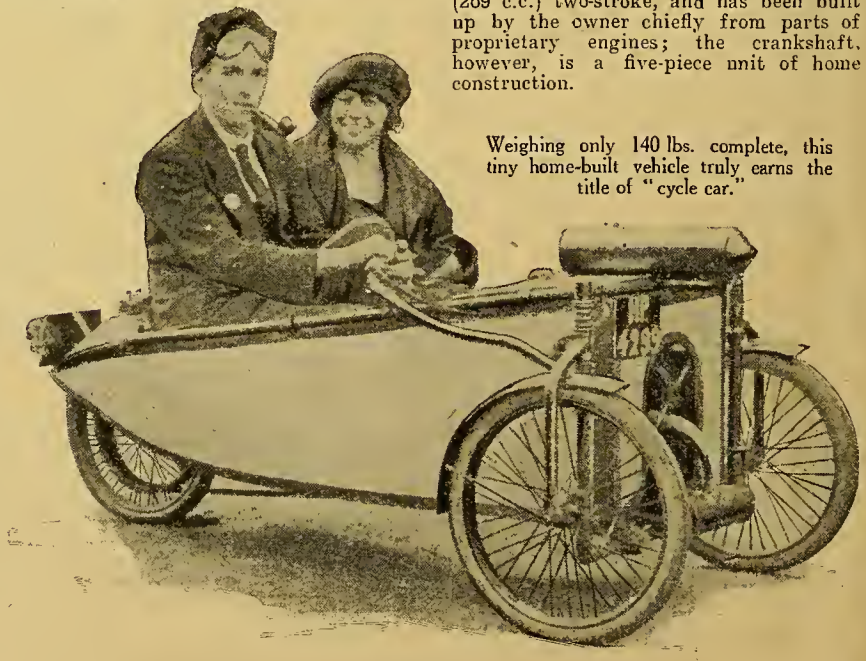
Components of the Parmor Carburetter.

A FEATHERWEIGHT THREE-WHEELER.

SOME interest has been aroused in the Midlands by the appearance on the roads of a tiny three-wheeled vehicle propelled by a two-stroke engine and carrying two passengers. The owner and manufacturer of the machine is Mr. J. Wainwright, of 53, Barras Lane, Coventry.

Weighing only 140 lbs. complete, the vehicle has a light tubular frame. The 20×1¾in. front wheels are mounted on vertical sliding tubes, the motion of which is controlled by coil springs; steering is direct through a tiller. The rear of the chassis is unsprung, but the seat frame is suspended on ash laths giving a certain amount of flexibility.

The power unit is a 70×70 mm. (269 c.c.) two-stroke, and has been built up by the owner chiefly from parts of proprietary engines; the crankshaft, however, is a five-piece unit of home construction.



Weighing only 140 lbs. complete, this tiny home-built vehicle truly earns the title of "cycle car."

READY FOR THE HOLIDAY—AND ALL THE ROAD MAY HOLD

His mount "tuned up" and running sweetly; in his pocket a book of Dunlop maps to guide him on his way—and on his machine a pair of trusty

DUNLOP TYRES

that will take him wherever he wants to go—with comfort, speed and safety.

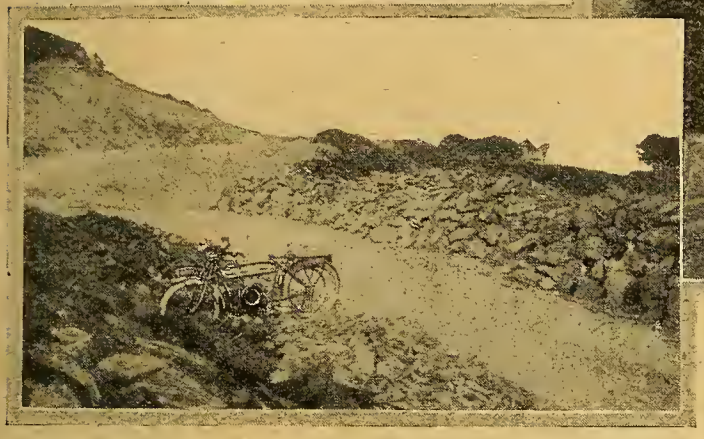
A New Coast Road



Part of the new Ilsham road, which will afford unbroken views of the sea.

At work on a bad bend. The new road, too, is very hilly but picturesque.

A Picturesque Coast Road, affording Tourists a glimpse of Devon's Remarkable Scenery.

SOUTH Devon gives promise of one of the finest motor roads in our country. It is the Ilsham road at present under construction right along the coast. It would be difficult to find on any part of our shores a more delightful road than this, with the Devon hills inland and the outward view across the Channel to the south.

Torquay has great ambitions, and she knows well that her natural virtues are an irresistible attraction to motorists, who look to South Devon with ever-increasing eagerness. There is no meanness about the outlay in the provision of facilities, and the opening up of choice ways in this beautiful neighbourhood, and the extension of the Ilsham road is a case in point.

To follow the Coast Line.

An inspection of a road map of South Devon shows that already the coast line is followed closely from Dawlish to Brixham, but an actual tracing of this road shows that the map encourages an expectation which is not fulfilled. The road does not by any means afford an unbroken view of the sea. It bends frequently inland and for miles has a barrier of trees between itself and the open sea. It is on the promontory east of Torquay, which ends in the rocky point of Hope's Nose, that the new road is being made, and the sea views are especially fine from the headland. A visit to the scene of operations shows what a vast amount of labour and energy is being expended, and with what thoroughness the extensive work is being carried out.

Just off the land in this vicinity are three rocks which rise from the sea and afford a quiet resting place for sea birds. They are known as the Thatcher Rock, Shag Rock, and Crestone Rock, and charming views of them may be obtained through the fir trees that are grouped along the cliffs.

The new road will not be without its gradients, but gradients mean vision, and are therefore not to be condemned. No one expects to find long level stretches in Devonshire. It is a land of climbs, and drops, and they are part of the interest of the district.

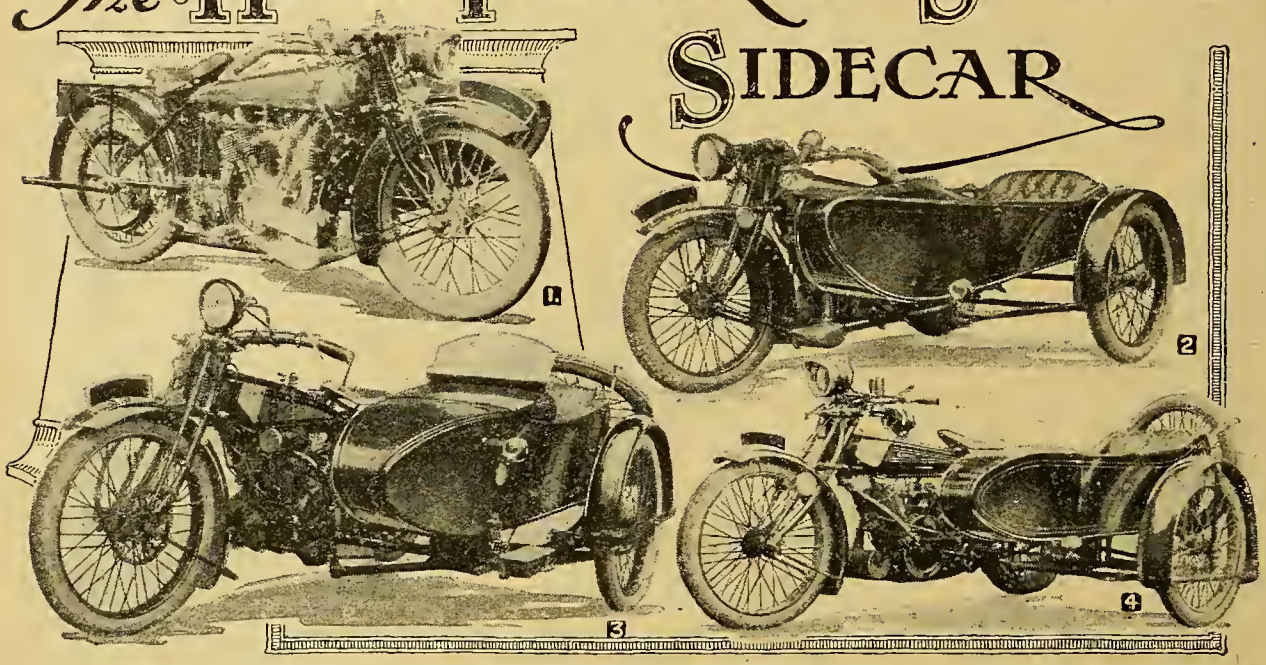
Another Coast Road.

One word of warning in this connection may not be without advantage. Motorists travelling west from Exeter will reach, a mile or so from the city, a dividing of the ways, where a very distinct notice points right to Torquay and left to Dawlish. The former is the inland road and runs over the hills. There is on this route one very stiff climb some two miles in length, over Telegraph Hill. It is said to be the worst hill anywhere in the district. The surface is good, but it is a somewhat trying ascent, and there is nothing to be gained by taking this way. Torquay must then be reached through Newton Abbot; but the coast road by Dawlish and Teignmouth is much to be preferred.

Dartmoor's Attractions.

If the sojourner at Torquay or thereabout wishes to experiment in climbing, he will find ample opportunity on Dartmoor. A run through Newton Abbot to Ashburton, and thence to Two Bridges near Princetown, will convince him that Dartmoor is not to be lightly considered. These great hills are, however, well within the range of the average mount, and it is only by a little daring and adventure that one can derive the fullest enjoyment from the remarkable scenery that has made central Devonshire famous. Let it, however, be borne in mind that the sunny weather that clings along the coast is no guarantee that the high moors may not be shrouded in an impenetrable mist or even undergoing heavy rain, and these are points one cannot easily ignore.

The High Powered Sports Sidecar



(1) 976 c.c. Brough Superior—side valve J.A.P. engine
(2) O.H.V. Brough Superior and Montgomery sidecar.
(3) 998 c.c. Rex with Blackburne engine.
(4) 998 c.c. Blackburne with Matchless sidecar chassis.

Experiences and Opinions of a Well-known Competition Rider.

POSSESSED with the love of speed, coupled with an intense dislike for trains, and a purse too slender to "run" a fast car, I have owned a rather striking series of fast sidecar outfits during the last few years, a brief but candid criticism of some of which might prove useful reading to the prospective owner of this type of machine.

Short of a powerful two-seater car, there is, to my mind, no type of vehicle so eminently suited to long-distance fast touring as a good big twin with medium-weight sidecar. Solo machines are pleasant enough in their way, but the extra luggage accommodation of a sidecar is an undeniable advantage, and I for one strongly object to finding my best suit full of holes or covered with tooth powder, such as frequently results from carrying one's suit case on an unsprung carrier. Likewise, being a methodical person, I like to carry a spanner to fit every nut on the machine, and the tool-bag has yet to be designed which will accommodate the resulting toolroll!

Misconceptions.

That the sports sidecar is comparatively seldom met with on the road is possibly largely accounted for—apart from the question of initial cost—by a rather prevalent ignorance on the part of soloists as to the speed capabilities of a fast outfit.

There is also a common belief that an empty sidecar is a source of danger, necessitating great care in negotiating corners. No idea could be more mistaken provided that intelligent forethought is shown in choosing a sidecar of suitable weight for one's choice of mount; its general build makes all the difference to a machine's behaviour with empty sidecar. A low-built "bus" with centre of gravity well down will corner safely with quite a light sidecar, whereas a top-heavy machine will require a far heavier attachment to attain the same degree of stability.

More important than appearance.

Of far greater importance than the appearance of a sidecar body is the strength of its chassis and connections, and this is a point which must be gone into very carefully when choosing a sidecar for a big twin, especially if it is to be light. It need hardly be said that one of the old-established firms should be patronised, since chassis design is a matter of experience rather than theory, and the maker's advice should be sought as to the most suitable chassis for the purpose.

Of the various types of motor cycles I have owned, the Harley-Davidson, Henderson, Blackburne, Rex-Blackburne, Brough Superior (o.h.v. and side-valve), and "sports" New Imperial are perhaps best suited for the purpose of illustrating this article, the aim of which is to give some idea of the road performance of a fast outfit, its steering-stability, and speed capabilities.

HENDERSON.—1,072 c.c., four-cylinder, two-speed, short wheelbase model, with "Fitsu" light sidecar, the chassis of which was not to my liking. This machine was standard but for flat T.T. bars and single-lever control. It is a pity that the English

The High Powered Sports Sidecar.—

market is not offered an alternative bar of this type, since the steering—especially solo—was much improved thereby.

The outfit was exceedingly fast but overgeared, so that speed had to be got up downhill. The speedometer was accurate to within a mile or two, and on one occasion actually registered 63 on the level. It steered really well and was stable with light sidecar.

BROUGH SUPERIOR.—Designed primarily as a *de luxe* speed mount to an ideal specification rather than to a figure, one naturally expects a lot from the Brough Superior. After nearly a year's experience of one of these mounts I am bound to say that my expectations have been fully justified. Equally good service, too, has been obtained from the sporting Montgomery sidecar recommended for use with these machines by their maker.

The power unit for the first 5,000 miles was an o.h.v. J.A.P. of 986 c.c., the chief attraction of which lay in the extraordinary power given off at low "revs.," enabling an abnormally high gear (3.25 to 1) to be employed. There is no denying the fascination of a really high gear; it quite upsets one's judgment of speed, and 40 feels like 28! The speed of this outfit was no less than 65, recorded by a speedometer accurate to fine limits.

A side-valve "sports" J.A.P. was substituted later, but, being an engine that loves to "rev.," the gear had to be lowered. Thus the chief charm of the o.h.v. engine was lost, but the side-valve scores in its greater accessibility and reliability. So far the maximum speed recorded is 61 m.p.h., but I hope to improve upon this later.

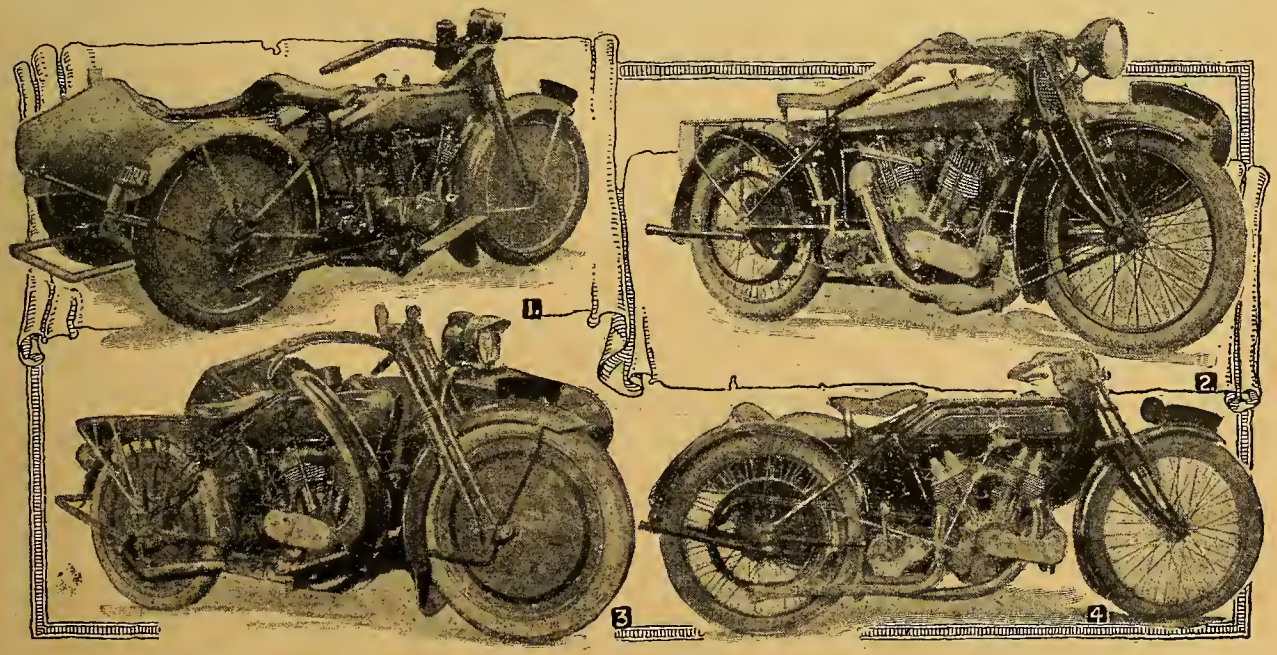
Perhaps the most outstanding feature of the Brough Superior as a sidecar machine is its amazingly light steering, and this in conjunction with an ideal riding position renders it the most comfortable long-distance mount I have yet experienced. Moreover, it holds the road remarkably well.

For sidecar work I frankly prefer Brampton forks to the now standard Montgomery; the former steer lighter, are more sensitive, and, above all, look neater. Montgomery forks have the advantage for solo work, however.

REX-BLACKBURNE.—The only machine of this make that need concern us is a very imposing outfit I owned. Encumbered with dynamo lighting and a very heavy sidecar, it was not well equipped for speed, but by dint of faking the engine the maximum speed had been improved by the previous owner, Mr. J. D. Martin, to the tune of 53 m.p.h. The Rex sporting body has most pleasing lines, and this, in addition to a pair of long plated exhaust pipes and T.T. bars, gave a rather cumbersome outfit quite a sporting appearance. In spite of an abnormally long wheelbase, the steering was excellent.

BLACKBURNE.—The 998 c.c. Blackburne is not, as a rule, particularly fast or lively, but one of mine had both qualities, the maximum speed being 52 m.p.h. The chassis was the Victory Matchless, standard until recently; this was strong, but heavy, and too wide in the track. The coil rear springing was given to bouncing with the sidecar empty, but behaved well under load. T.T. bars and footrests gave this outfit a distinctive appearance. The steering and front springing I did not like, and this is a point on these otherwise delightful machines which needed attention. The forks had a pronounced rake, and there was too much trail, which, in conjunction with the wide chassis, made cornering laborious.

HARLEY-DAVIDSON.—These delightful machines need no praise from me, since their merits are well known, but a word of warning might be advisable,



(1) 1916 Harley-Davidson with Millford chassis and Rennoc body. (2) 986 c.c. Brough Superior with overhead valves.
(3) 1919 Harley-Davidson with underslung chassis and touring body. (4) 976 c.c. "sports" New Imperial.

The High Powered Sports Side Car.—since they are frequently delivered solo and so are to be seen with a variety of attachments, many of them quite unsuitable.

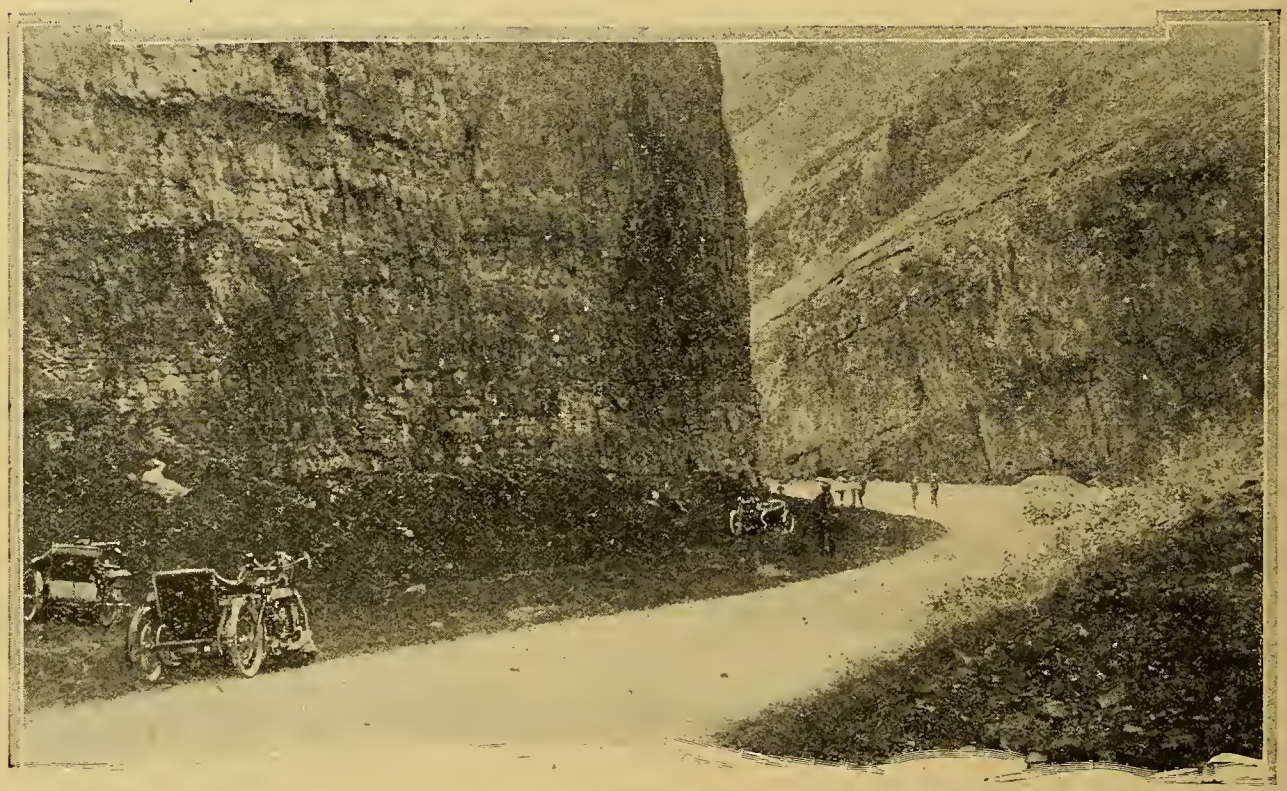
It is a mistake to fit an ultra-light sidecar to a Harley, since it is a rather top-heavy machine The sporting Montgomery or Grindlay suit this mount well and is as light as is compatible with safety.

The best Harley I had was an old grey 1916 model with Millford Empress chassis (which gave wonderful service), Rennoc torpedo body, and disc wheels. This outfit would do 52 m.p.h., and steered well. A later (1919) model fitted with a heavy touring body and underslung chassis was a shade faster, but the engine was not so delightfully "silky," and the chassis was very unsatisfactory for high speed work.

"Sports" New Imperial.—Introduced at Olympia last autumn, this new model attracted considerable attention from its racy appearance. The 976 c.c. Sports J.A.P. unit supplies the power, and the gear box is a three-speed Burman. It is intended purely as a speed mount, and so the makers have dispensed with carrier, toolbags, silencer, etc., and mudguarding is of the simplest. The frame, however, is on the lines of the standard production and is rather too high to give the best results for speed work either solo or with light sidecar.

Fitted with a light Grindlay sporting sidecar, this outfit was exceedingly fast, but the steering is rather heavy, and the sidecar tyre got very little wear, being seldom on the ground! Unfortunately, I was unable to try out the maximum speed very thoroughly before parting with the outfit, but it would do over 60 m.p.h. without a shadow of doubt, and the acceleration was positively sensational.

W. A. Fell-Smith.



Striking and unique in formation Cheddar Gorge forms an attractive destination for hundreds of motor cyclists living in the West Country. Situated between Axbridge and Wells these great cliffs tower over a road leading to the beautiful Mendips.

MOTOR CYCLES AND THEIR USES.

THE following ingenious paragraph appeared in a recent issue of a provincial paper at the end of a column on general motor cycle matters pertaining to the enthusiast, and is reproduced here as an example of the adaptability of the modern motor cycle. Probably few people realise how frequently, in the course of ordinary conversation, they make use of the names of some of the leading machines manufactured to-day:—

"Let theirs be a summer of Sunbeams, of many Triumphs, the Acme of all previous seasons, Alldays and every day a Diamond in their memories; may their speed excel the Aerial flight of the Bat; forbid that they ever come to a Blackburne they Connaught cross; may their purses ever contain a Bradbury for times of stress. Here's hoping we'll all stick together like the Ivy, a Matchless combination of O.K. chaps, ever ready to Raleigh to the help of some poor stranded Rover. Let's hope we Beardmore police traps without being copped, and reach our Zenith in avoiding with Precision any hard wall that threatens to make us Rex!".

CURRENT CHAT

Times to Light Lamps.

August 10th	.. ..	9.2 p.m.
„ 12th	.. ..	8.59 „
„ 14th	.. ..	8.55 „
„ 16th	.. ..	8.50 „

One number plate must be illuminated as above *ride* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

A Question of Tune.

From a provincial paper :—"A.B.C. Scootamoto, new appearance, scarcely used, £18, or exchange for a piano.———"

Riding an overhead eight valve Harley-Davidson, F. W. Dixon exceeded 103 m.p.h. at Clipston near Mansfield recently. This was the first occasion on which 100 m.p.h. had been attained in this country outside a racing track.

"Coueism" and "The Motor Cycle."

A reader writes that "Coueism" must be part of the routine at our editorial offices, since *The Motor Cycle* really gets "better and better" each week.

Visiting Zeebrugge.

Tourists travelling to Belgium by the G.E. Railway who disembark at Zeebrugge should spend half an hour on the famous Mole there. The scene of the greatest naval exploit since Trafalgar, it is well worth a visit, and complete details of the fight are given in a booklet obtainable on the spot.

Benzole Mixtures.

A ready mixed petrol-benzole fuel is now obtainable. It is a boon to those riders of heavy outfits who find that benzole is essential for cool running and absence of knocking.

Variable Pulley Gearing for Lightweights.

A countershaft infinitely variable gear (with kick starter) is shortly to be marketed for lightweight machines. One of our riders recently tested the experimental model amid the traffic of Fleet Street.

Observers for the Six Days.

Motor cyclists willing to act as observers and marshals during the first day's run of the Six Days Trials (August 21st) in the York and Thirsk, Kirby-Moorside and Sheffield districts should forward their names to Mr. W. A. Dovener, 26, Beamsley Avenue, Frizinghall, Bradford.

Catering at Speed Trials.

No one will deny that the average speed trial or hill-climb of 300-400 entries is a dull affair, only to be ameliorated by such adventitious aids as bands of music or a good caterer's stall. The latter invariably does good business, and is specially desirable when the proceedings are protracted.

Giving Old Machines a Chance.

Classes in all manner of competitions might be set aside for pre-1914 machines. They always provide interest, sometimes amusement, and in any case encourage riders to participate in club life who at present feel that possession of the latest type of machine is essential to success. Trials organisers and award donors please note.

Traffic Blocks.

Provincial motor cyclists seldom encounter traffic hold-ups so extensive as those which occur in London. Recently a member of *The Motor Cycle* staff found himself held up by the kerb just opposite the door of a well-known city accessory store, stopped his engine, went in and bought two chain links, returned and restarted just as the traffic moved on again.

Anglo-Dutch Trial.

As already announced in *The Motor Cycle*, the annual Anglo-Dutch motor cycle trial will be held in Holland from Friday, September 15th, to Monday, September 18th, inclusive. The British team will be selected and the detail arrangements made by the Eastern Centre of the A.C.U., and the British competitors and officials will journey to Holland on Thursday, September 14th. The Dutch motor cyclists are preparing a series of social entertainments for the British representatives.

The Popular Motor Cycle.

There were very few motor cycles in their garages during last week end, judging from the number on the roads.

Police Activity.

A correspondent informs us that there is police activity at Nether Wallop, between Andover and Salisbury.

Army Motor Cycles.

There are now 2,415 motor cycles in the control of the War Office, while in 1914 there were only 24. In the Royal Air Force the motor transport section has 512 motor bicycles and 316 sidecars.

Belgian Grand Prix Surprise.

The A.C.U. has received an official letter from the authorities responsible for the Belgian Grand Prix to the effect that Alec. Jackson, the Sunbeam rider who came in first in the race, was disqualified for changing a sparking plug.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Obstruction by Tractors.

Drivers of heavy tractors should note that one of their fraternity the other day was fined £4 and costs at the Buntingford Petty Sessions for obstructing the passage of a motorist who wished to pass him on the highway between Barkway and Hare Street.

A Motor Cyclist Author.

John Long has just published a novel by a motor cyclist author—John L. Carter. Its title is "Come Day—Go Day," and at least one chapter is full of mechanical matters of particular interest to the motor cyclist. Some day perhaps John L. Carter will give us a real motor cycling novel, and if he attains the same standard of humour as is revealed in "Come Day—Go Day" it will stand more than a sporting chance of being a best seller—among motor cyclists at least.

Light Traffic.

Two pedal cyclists riding side by side are as difficult to pass on the road as a motor coach.

Family Sidecars.

There is a marked increase in the use of double-seated sidecars, occupied apparently by parents who have purchased machines which their sons—and sometimes daughters—drive.

Picnics in the Wet.

The inclement weather of this summer has not deterred the family sidecar party from enjoying its midday picnic. A waterproof tent is now coming to be recognised as an essential part of sidecar equipment.

A Mobile Caterer.

Last week-end we saw a sidecar with a trailer. We quite expected to find that the latter was a portable caravan. When it was "opened out," we were invited to have a "cup of tea, price 3d."—a good idea and one appreciated by the fair sex.

Undesirable Pyrotechnics.

Why do some riders allow the exhaust systems of their machines to become choked with carbon and soot? At dusk machines are sometimes seen leaving a rocket-like trail of glowing sparks in their wake.

A Reminder to Parents.

It is a matter for regret that quite a number of thoughtless parents take out their young children in sidecars without providing a screen to protect them from grit and dust. Frequently outfits may be noticed on which the lady of the party is comfortably accommodated behind a screen, but a juvenile sits before it.

Pillion Riding.

Replying to a question in the House of Commons, the Secretary of the Ministry of Transport, Mr. Neal, said that he had no evidence that the number of accidents due to pillion riding was increasing, and that he did not think there was sufficient ground to justify legislative action.

Youthful Riders.

Apropos of Col. Brereton's article in these pages on "Motor Cycles for Boys and Girls," and the correspondence which followed, it is noticeable that fully 90 per cent. of the large number of youthful riders on the road to-day are among the most careful and considerate users of the highway.

Hand-signalling Extraordinary.

A reader tells us that while riding behind a large American car, nearing some cross-roads, the word "Left" appeared on a device over the rear number plate, and simultaneously a hand shot out from the off-side of the car; to crown this, the driver accelerated and kept straight on his original course!

Feminine Fashions.

The mere male will no doubt have noticed that lady sidecar passengers are this year wearing large hats in lieu of the leather cap or Tam o' Shanter once so popular. Our passengers inform us that the change is not entirely due to fashion, but that, with an efficient screen, the large brim shades the eyes and prevents headache.

Tea in Thermos Flasks.

A picnic basket tip is to carry milk for the tea in the Thermos, in a bottle; if mixed in the first place, the cup of tea loses its refreshing qualities.

Pottering in London.

Not the least enjoyable evening rides for the London motor cyclist is a potter through the quiet streets which are so congested during business hours.

A New By-pass Road.

Rapid progress is being made with the new relief road running between Chiswick and Staines. This road, constructed with the object of relieving congestion on the Chiswick — Brentford — Hounslow route out of London, is constructed throughout of asphalt, and is of unusual width. It is estimated that the work will be completed two years hence.

The Latest in Sidecar Equipment.

In the specially made dash of a *de luxe* sidecar recently seen on the road was a shelf containing a neat array of books. This sidecar library included "Motor Cycle Reminiscences," by Ixion; "Motor Cycles and How to Manage Them," "Tracing Motor Cycle Troubles," "The Motor Cycle Route Book," "Hints and Tips for Motor Cyclists," several of Charles G. Harper's works, a log-book and three novels.

Eastern Danger Spots.

There is a lack of road warning signs in the Eastern Counties. According to correspondents, Low Hill, near Royden, Essex, is "most dangerous," and so is the right-hand turn in the village of Weeley, between Colchester and Clacton; the former is unposted; the latter is so bad that the ordinary warning signal is useless.

Musical Two-Strokes.

Why does a two-stroke engine alter its exhaust note to a sharp, high-pitched "twanging" sound while fourstroking? Perhaps some two-stroke expert can explain.

Tracing Troubles.

It is not very often that one finds a motor cyclist by the roadside studying the maker's book of instructions, yet frequently one sees car owners diagnosing trouble by aid of the printed word.

Fire!

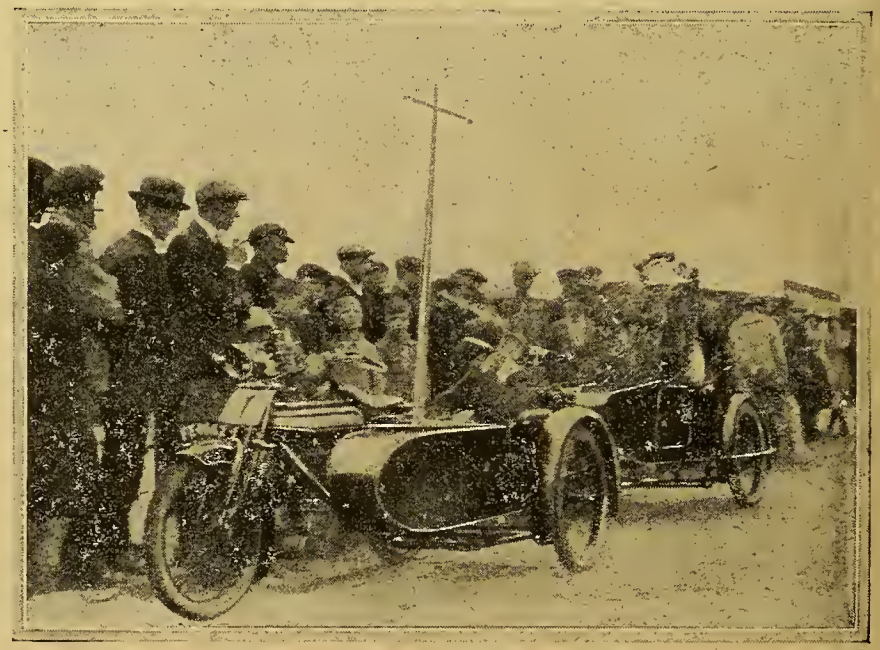
A pillion rider, by dint of striking many matches, managed to relight an extinguished rear lamp without having to call a halt. But "what was gained on the swings was lost on the roundabouts," for he had to dismount with alacrity when he found his nether garments smouldering!

Silent Brooklands.

When an L. and S.W. express train rattles along the railway straight at Brooklands, it is impossible to hear the cars and motor cycles running in the vicinity. Aggrieved track-men wonder if there is anything particularly soothing in a steam locomotive's roar and clatter to the Weybridge residents who have complained of the motors' noises.

Expert Evidence!

At the Leicester County Court "an expert in motor cycles" stated that it was a very risky thing to start a motor cycle by running along with it. Such a silly statement would not matter much if it had not been responsible for a motor cyclist being found guilty of negligence when his machine crashed into a shop window, judgment admittedly being swayed by the "expert's" opinion.



A sign of the times at the Bootle motor carnival. The owner of this Norton outfit—evidently a wireless enthusiast—conceived the idea of fitting his sidecar with a wireless receiving set instead of decorating it in the more orthodox way.

Yorkshire Holiday Event.

Fourteen solo and four passenger outfits started in the annual York-Edinburgh-York trial of the York M.C., and twelve and two respectively finished on Monday night. There were no serious hills, and the weather conditions were favourable.

The Other Japs.

The Japanese are taking up motor cycling with considerable enthusiasm, but, according to Mr. H. C. Lepper, the secretary of the Yokohama M.C.C., they favour, for some unknown reason, heavy American machines, which are much too high to allow the riders to touch the ground with their feet. Many spills and bruises are the result.

Mrs. Janson's "Double-twelve" record.

At an informal gathering at the Langham Hotel in celebration of Mrs. Janson's double-twelve hour record on the 249 c.c. Trump-Jap, that intrépid lady said that Col. Stewart of Trump Motors, Ltd., had confessed to thinking so little of the possibility of a woman completing the distance that he just handed over an ordinary stock machine for the ride.

Touring Equipment Overseas.

The motor cyclist who tours the British Isles frequently wonders what his Overseas brothers do in the matter of equipment. In this country there is generally a garage within five miles, or at the worst twenty miles. The tourist in South Africa, Australia, and New Zealand has to give closer attention to the question of spares and supplies. Perhaps some of our many overseas readers will let us know the main items of their equipment when on tour.

"Hon. Sec." Translated.

We suspect that a native typist was responsible for the phrase "honorable secretary," in a letter received from the Far East.

750 c.c. Cycle Car Records.

On Wednesday, Augnst 2nd, the little A.V. driven by A. E. Taylor made a successful attack on Brooklands records. As the A.V comes under the F.I.C.M. definiton of a cycle car, the records attempted were those of Class J.1 (under 750 c.c.). From a flying start the kilometre was covered at a speed of 116.09 k.p.h. (72.10 m.p.h.), while the mile was covered at 71.43 m.p.h., and the five miles at a speed of 69.62 m.p.h. These are class records, and for world's records the mean speeds of both directions have to be considered, these being 115.34 k.p.h. or 71.67 m.p.h. for the kilometre, and 70.89 m.p.h. for the mile

Observers for the Six Days.

Local A.C.U. Centres have been asked to provide a complete staff of marshals and observers for each section of the course of the forthcoming Six Days Trials, and unattached motor cyclists willing to help should communicate with the nearest Centre Secretary. The addresses are: Yorkshire, Mr. W. A. Dovener, 26, Beamsley Road, Frizinghall, Bradford; East Midland, Mr. K. S. Topping, 64, Frederick Street, Loughborough; Cheshire, Mr. W. G. Hill, Hill's Garage, The Newgate, Chester; Midland, Mr. E. W. Winckle, 105, Colmore Row, Birmingham; North Wales, Mr. J. H. Davies, Bryn Golen, Ruthin; East South Wales, Mr. A. B. Adams, "The Croft," Clevedon Road, Newport, Mon.; Western, Mr. John Howell, 12, The Foregate, Worcester; South Midland, Mr. E. J. Pittock, 57, Gap Road, Wimbledon, S.W.

INTERNATIONAL TRIALS IN SWITZERLAND.

Teams from Britain, Sweden and Switzerland in Six Days' Contest. Forty-five Entrants Representing Five Countries.

IN England we have always been accustomed to judge the importance of a trial by the number of entries received.. Rather should we ascribe importance to the quality of the entries, and to the lessons the trial teaches.

For the International Trials there are but 45 entries. More is the pity; but our British representatives are first-class riders, who are mounted on the best machines the world can produce.

Included in our team we have two T.T. winners, who are pitted against the best Swiss motor cyclists who won the Cup in 1920, and who held it in 1921 against the strongest team we could put forward; moreover, they are competing on their own soil, and so have the advantage of our men, since no one in our team knows a yard of the very difficult course, which has not its equal in the British Isles.

Among the other British riders not in the team, Eric Williams (A.J.S.), and Hugh Gibson (Raleigh) rode last year, and so are conversant with the difficulties and peculiar nature of the country.

Whereas last year there were only two international teams, this year there are three, the third being that from Sweden. The Swedes have proved themselves to be true sportsmen, and sent their Husqvarna sidecar outfit by road, taking four days from the port of landing in Germany. The three international teams were composed as follows:—

ENGLAND.
G. S. Davison (249 Levis).
A. Bennett (492 Sunbeam).
F. W. Giles (800 A.J.S. sc.).

SWITZERLAND.
J. Morand (248 Condor).
A. Robert (496 Motosacoche).
E. Gex (994 Motosacoche sc.).

SWEDEN.
B. Malmberg (494 Husqvarna).
G. Göthe (494 Husqvarna).
P. Swanbeck (995 Husqvarna sc.).

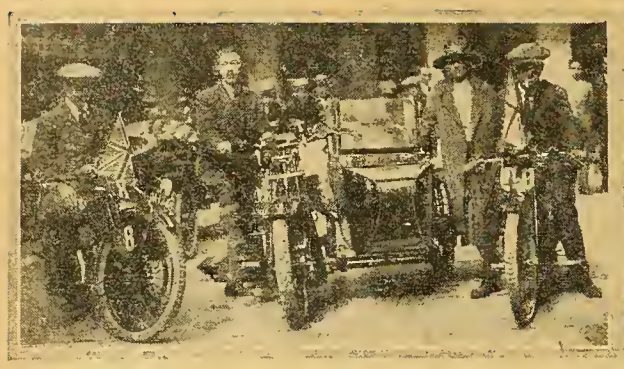
At the time of starting the entry list was composed of the following:—

H. Dinkel, Swiss (248 Condor).
J. Morand, Swiss (742 Condor).
V. Pittet, Swiss (248 Condor).
A. Clerc, Swiss (346 Condor).
J. Volzenlogel, French (346 Condor).
L. Divorne, Swiss (248 Condor).
P. L. Hurrelbrink, Dutch (498 Sarolea).
A. Bennett, English (492 Sunbeam).
J. Robmann, Swiss (999 Frera).
G. S. Davison, English (249 Levis).
E. Gex, Swiss (994 Motosacoche sc.).
F. Franconi, Swiss (496 Motosacoche).
A. Souvairan, Swiss (994 Motosacoche sc.).
L. Bouvin, Swiss (994 Motosacoche).
L. Pélissier, Swiss (994 Motosacoche).
A. Robert, Swiss (496 Motosacoche).
A. Rothenbach, Swiss (987 Harley-Davidson).
O. Sutter, Swiss (987 Harley-Davidson).
A. Leu, Swiss (987 Harley-Davidson).
B. Malmberg, Swedish (494 Husqvarna).
G. Göthe, Swedish (494 Husqvarna).
P. Swanbeck, Swedish (995 Husqvarna sc.).
O. Lambert, French (696 Viratelle).
D. Senning, Swedish (999 Husqvarna).
F. Egger, Swiss (499 Triumph).
Hugh Gibson, English (348 Raleigh).
E. Borsetti, Italian (348 Raleigh).
E. Sydney, English (348 Raleigh).
C. Laeser, Swiss (965 New Imperial).
A. Dement, Swiss (244 New Imperial).
E. Desfeux, Swiss (292 New Imperial).
G. Fuhrer, Swiss (994 Motosacoche).
R. Gay, Swiss (986 B.S.A. sc.).
W. E. Clarke, English (653 Quadrant).
Clifford Wilson, English (653 Quadrant).
L. Meyer, Swiss (994 Motosacoche).
F. W. Giles, English (800 A.J.S. sc.).
Erie Williams, English (348 A.J.S.).
N. F. Harris, English (348 A.J.S.).
Lt. Glen Kidston, R.N., English (499 Sunbeam).
G. L. Hamer, Dutch (736 Douglas).
A. Dunand, Swiss (499 Sunbeam).
A. Pictet, Swiss (1,098 Hinstin cycle car).
A. Bertschi, Swiss (499 Triumph).
E. Markiewicz, Swiss (749 Benjamin cycle car).

Even though the French who live on the Swiss border did not send a team, two French riders were entered. There were two Dutchmen, and one Italian, while practically one-fourth of the riders were English. As last year the examination was in the Electoral buildings, and was carried out with characteristic thoroughness. Great attention was paid to silence, and many a rider had to "fish-tail" the end of his silencer.

Scenes at the Examination.

Two days were taken up in the examination of the machines, which with their riders were weighed, while all-important portions, such as crank cases, wheels, frames, and tanks were sealed.



TWO OF THE TEAMS IN THE INTERNATIONAL SIX DAYS TRIAL.

Competing for Britain: A. Bennett (492 c.c. Sunbeam), F. W. Giles (800 c.c. A.J.S. sidecar) and G. S. Davison (247 c.c. Levis).

Swedish representatives' debut: they are all mounted on Husqvarnas, Sweden's leading motor cycle.

Three British club teams are competing for the Team Prize—the Worcester and District M.C.C. (F. W. Giles, Eric Williams, and H. F. Harris); the Bradford and District M.C.C. (E. Sidney, Hugh Gibson, and Clifford Wilson): and the British Motor Cycle Racing Club (G. S. Davison, A. Bennett, and W. E. Clark).

FIRST DAY'S RUN: GENEVA—CHAUX DE FONDS (124 MILES).

Last Thursday morning broke overcast and fresh, but with every prospect of fine weather.

The day's run was an easy one, just intended to introduce the riders to the type of country they would have to traverse during the remainder of the trial. It is not surprising, therefore, that all who started reached their destination to time.

The competitors were started in order according to a draw, and curiously enough the principal British riders got away first. F. W. Giles (A.J.S. sc.), then Hugh Gibson on the Raleigh, A. Bennett on his spotless Sunbeam, and G. S. Davison on his not quite so spotless Levis. "Truly," as a Swiss official remarked to us the day before, "you have sent us your 'aces.'"

Quite a remarkable feature of the day's journey was the excellence of the roads. On from Geneva the route lay along the shores of the beautiful lake, over a smooth, well-tarred highway for some 12 miles until Nyon was reached; it then turned abruptly "inland" up into the Swiss Jura, a beautiful country with wooded hills rarely raising their tops above the tree-line but over roads often exceeding Ben Nevis in altitude.

Once the blue-green waters of the lake had been left the competitors started to climb; first over the four miles climb up the Col de St. Cergue, rising nearly 2,000 feet but over smooth, gradually rising roads with easy bends. Then the road flanked the sides of the mountains overlooking the lake, descended a little, and then started to rise—the beginning of the Col de Marchairuz—the first observed hill. This climb was a long one, well over four miles of gradient, easy at first but with a final hairpin of about 1 in 7 on the inside. Both the British team and the other British riders looked perfectly happy. Giles on the 800 c.c. A.J.S. sidecar, with his wife as passenger, looked as if he were on a holiday tour. Our two "aces," Bennett and Davison, were seemingly just as content, while the Raleighs and Quadrants made light work of the hill. Naturally such a climb in no way worried the Swiss-born Condors and Motosacoches, while the Swedish Husqvarnas made excellent ascents.

A steep winding descent through the pretty uplands of the Juras followed, leading to the charming little Lac de Joux, on the road round which there was recently held the first Swiss motor cycle Grand Prix.

As the lake is approached two valleys appear, and the competitors, to their surprise, were directed up the one through which there appeared to be no exit. It was a short and pretty climb through almost a gorge, followed by a steep winding descent to Vallorbe, the luncheon stop.

Though one or two of the higher corners of the observed hill had been rough, the morning's roads were excellent, but after lunch came the ascent of Ste. Croix, which occupied a quarter of an hour, was somewhat steep and rather rough. The competitors then descended to Neuchâtel, getting a glimpse of its pretty lake, and made a long winding climb up to the Vue des Alpes, whence on a clear day can be seen the whole range from Mont Blanc to the Bernese Oberland. Needless to say, it was misty! The climb presented no difficulties, and on the summit we were interested to chat with a police lieutenant and his sergeant who arrived on a Motosacoche sidecar outfit.

A five miles descent brought the competitors to Chaux de Fonds, where the day's run terminated. All who started arrived without the loss of a single mark, despite several secret checks.

SECOND DAY'S RUN: CHAUX DE FONDS —ZURICH (174 MILES.)

Friday's run was considered to be the most difficult of any. It had not the enormously long climbs of Saturday's route, but judged from English standards the hills were both long and severe, averaging from three to four miles and comprising country roads of a nature which we call "colonial."

Despite blue skies, a hot sun and a cool breeze to temper its heat—in a word, ideal weather—the severity of the course told its tale of victims, and three were removed from the list of survivors. British and Swiss teams were both intact, though of the latter Robert (Motosacoche), the champion rider of Switzerland, was caught out at a secret control, the accuracy of the timing of which was indisputable, and so lost marks. During the second day, therefore, the British team was leading; still, with four more days to go much could happen. Of the gallant Swedes, Captain Svanbeck (Husqvarna) struck a boulder with his gear box and had to retire, L. Divorne (248 Condor-Swiss) and W. E. Clark (653 Quadrant) had to retire, while several lost marks.

(To be concluded.)

CROYDON HILL CLIMB.

Side-valve Single Makes Fastest Solo and Sidecar Times at Marlpit Hill.

MARLPIT LANE, Coulsdon, was on Saturday last the scene of a poorly orted but nevertheless interesting hill climb, open to members of the Croydon and District M.C.C.

A. Attwood (548 Hawker) made fastest time in both the solo and sidecar classes, his time in the former being 31⅘ seconds for the flying half mile.

Time results of the various classes were as follows:—

350 c.c. Solo.

Private Owners.—1, N. Peet (349 A.J.S.), 38⅖s.; 2, M. Jones (349 Douglas), 45⅕s

Trade.—1, N. Peet (349 A.J.S.), and C. M. Fairweather (250 Coulson), 37⅖s., tied.

600 c.c. Solo.

Private Owners.—1, G. Symonds (499 Duzmo), 34⅖s.; 2, N. Peet (349 A.J.S.), 37⅗s.

Trade.—1, A. Attwood (548 Hawker), 32⅖s.; 2, G. Symonds (499 Duzmo), 33⅕s.

Unlimited Solo.

Private Owners.—1, G. Symonds (499 Duzmo), 32s.; 2, I. P. Riddoch (548 Hawker), 32⅖s.

Trade.—1, A. Attwood (548 Hawker), 31⅖s.; 2, I. P. Riddoch (548 Hawker), 33⅖s.

600 c.c. Sidecars.

1, A. Attwood (548 Hawker sc.), 45s.

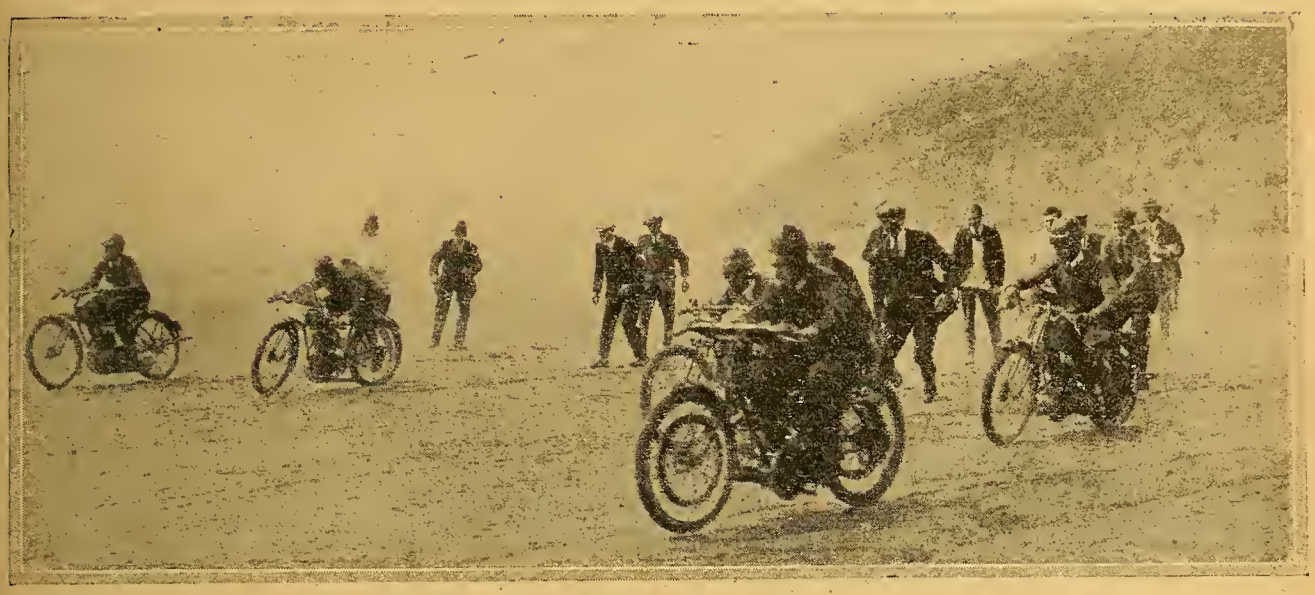
Unlimited Sidecars.

Private Owners.—1, W. Bucknell (976 Matchless sc.), 48⅕s.; H. S. Jerome (398 A.B.C.), 53⅖s.

Trade.—1, A. Attwood (548 Hawker sc.), 45⅕s.; A. E. Chittenden (976 Brough-Superior sc.), 49⅕s.

BANK HOLIDAY MEET AT PENDINE.

West Wales Centre Open Speed Trials provide Interesting and Varied Racing.



Competitors getting away in the 350 c.c. 4 mile race. Wet sand made the process an uncertain one.

ONE came away from the open speed trials at Pendine on Monday reassured that motor cycle racing *is* the finest of all sports.

Everything combined to make the day an enjoyable one—sunshine, a vast expanse of not-too-wet sand, satisfactory fields, thrilling racing, and—George Dance. Not that the Sunbeam wizard, now happily recovered from his accident at Catsash, monopolised everything—there were other exceptionally good men on good machines there—but he certainly won all the events in which he entered, including most of the Welsh championships for this year.

There was no split seconds timekeeping, formula calculating or handicapping, nor an endless procession of solitary riders whizzing by at irregular intervals; each class was a race—usually either twice or five times round a two-mile there-and-back course—and everybody started at once, or as nearly as readily-sinking wheels permitted.

Welsh Championships.

Championship events came first, all over the full ten miles except the lightweights and the sidecars.

Of the seven "275 c.c." starters, W. Edwards (Rex Acme) lost least time after the flag dropped, but Morris Isaac (New Imperial) quickly ousted him from the leading position, and Edwards had to be content with a second place, hardly won from L. I. Davies (Diamond) on the last lap.

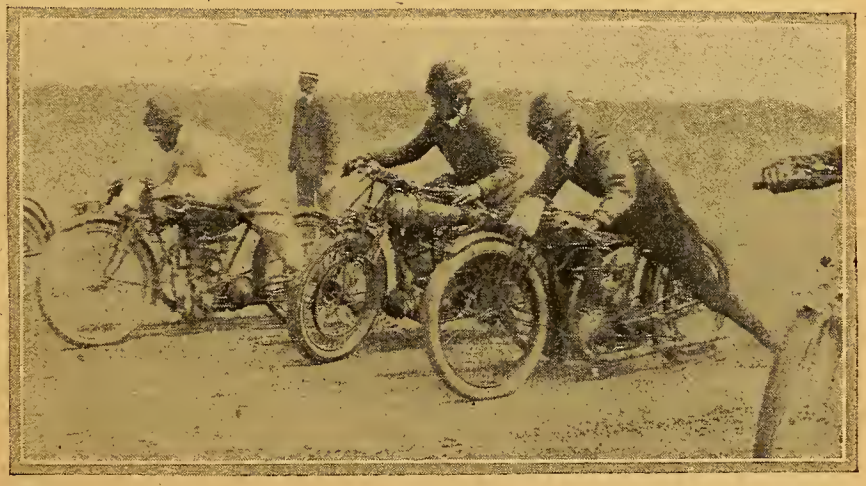
275 c.c. Championship (4 Miles).
1. Morris Isaac (249 New Imperial).
2. W. Edwards (249 Rex-Acme).
3. L. I. Davies (249 Diamond).
Winner's time = 4m. 43⅕s.

There was a like number of competitors in the "Junior" race, and when L. I. Davies (Cotton), W. Edwards (o.h.v. A.J.S.) and C. Sgonina (own-conversion o.h.v. A.J.S.) completed a lap almost neck-and-neck, a close finish seemed likely. However, the Cotton gradually lost ground, and Sgonina's machine was suffering from oil on the clutch, allowing the other A.J.S. to increase its lead steadily to the finish. Posters on the course advised us to "watch the Sheffield-Henderson"; as it turned out, we could not avoid doing so.

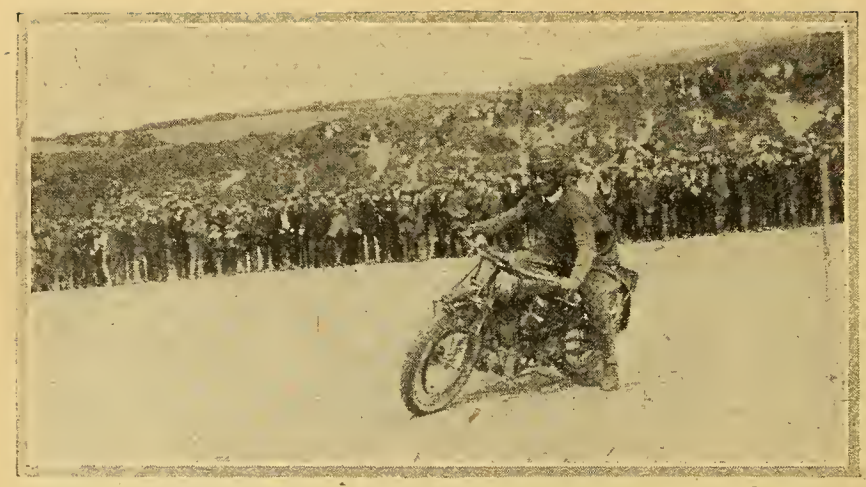
T. J. Thomas' machine of that ilk was at least as fast as any, but his skid-cornering was lurid to the extreme. It appeared to be a case of more haste less speed.

350 c.c. Championship (10 Miles).
1. W. Edwards (349 A.J.S.).
2. A. Bullock (349 Weatherell).
3. T. J. Thomas (349 Sheffield-Henderson).
Winner's time = 10m. 11s.

C. P. Wood (Scott Squirrel), H. Hassall (o.h.v. Norton), Sgonina (Sgonina-Special), and Dance (o.h.v. Sunbeam) were obviously the people who mattered in the 560 c.c. event, and although Dance was possibly most fancied, any one of the other three was entitled to consideration. Wood was left at the post with an oiled-up plug, and for four laps Dance and Hassall hurtled round together, with Sgonina never hopelessly behind. Dance steered an uncannily close course at the corners, but Hassall, if sometimes wider, was not one whit slower in getting round. Then, half-way up his last lap, the Wolverhampton man really opened out, led round the last corner, and sped down the straight about 100 yards in front.



Waiting for the starter's flag to drop in the championship sprint: from left to right—C. Sgonina (Sgonina-Special), Handel Davies (Brough-Superior) and George Dance (Sunbeam).



Handel Davies and the Brough-Superior proved an invincible combination in the closed events; and was always well placed in the championships. Davies cornering when leading the field in the unlimited four mile race.

His speed for the ten miles, including nine acute turns, equals 63.27 m.p.h., which he bettered slightly in another class.

560 c.c. Championship (10 miles).
1. G. Dance (499 Sunbeam).
2. H. Hassall (490 Norton).
3. C. Sgonina (Sgonina Special).
Winner's time=9m. 29s.

He had a slightly more difficult task in the unlimited event. for Wood had overcome his plug trouble and H. Davies (Brough-Superior) turned out to be a very speedy dark horse. Davies led first time round, followed by Dance, Wood, and Hassall, but he lost his position on the turn; it was Wood, Dance, and Davies for the following two laps—Wood's corner work being wide but amazingly sure and fast. Entering the last lap Dance had dropped to third, but, sure enough, less than two minutes later the craning spectators saw what they had more than half expected—the Sunbeam whizzing across the line at 80 m.p.h., with the Brough-Superior and the Scott relegated to second and third. There was a storm of applause. George Grinton, the Edinburgh Harley rider and Scottish "Heavyweight" champion, was hampered by gear box trouble in this race, or possibly things might have hummed even more.

Unlimited Championship (10 miles).
1. G. Dance (499 Sunbeam).
2. H. Davies (976 Brough-Superior).
3. C. P. Wood (481 Scott).
Winner's time=9m. 1⅘s.

A Right-hand Sidecar.

Although the open sidecar race did not actually come next, it nevertheless deserves description at this juncture. Wood, Grinton—with only top gear in action—Davies (Brough-Superior), and F. Bush (Harley-D.) were the starters. Since all the turns were left-hand ones the Scott's right-hand sidecar was distinctly advantageous, but the Brough-Superior, with a conventional attachment, kept just ahead until the finishing straight. Then the big twin oiled up a plug and coasted-in in neutral many yards behind the humming two-stroke. It was a pity, for the finish most assuredly would have been keen.

Unlimited Sidecar Championship (4 miles).
1. C. P. Wood (481 Scott sc.).
2. H. Davies (976 Brough-Superior sc.).
3. F. Bush (998 Harley-Davidson sc.).
Winner's time=4m. 18⅗s.

As last year, the West Wales Centre closed four-mile events, which followed, were as interesting as the open events, this despite the fact that all the competitors were genuine members of local clubs.

After a false start in the 300 c.c. race, all six competitors left the line as one man—an impressive sight. At half-distance Morris Isaac (New Imperial) and L. I. Davies (Diamond) cornered together, only occupying the space a sidecar outfit would have taken up. For a moment it almost seemed that they would crash. Still dead level, they screamed round for the second and last time, and in that formation they crossed the finishing line—a dead heat.

300 c.c. Closed (4 miles).
1. M. Isaac (249 New Imperial) and L. I. Davies (249 Diamond), tied.
3. W. Edwards (249 Rex Acme).
Winner's time=4m. 52s.

But slightly less sharply contested was the 350 c.c. affair. This time it was Sgonina (A.J.S.-Special) *versus* L. I. Davies (Cotton-Blackburne). Davies led until the second about-turn, when his rival gained fully 10 yards by a well-judged, neat loop, retaining the resulting advanfage, but hardly gaining on it, until the end. T. J. Thomas (Sheffield-Henderson) was never dangerous, but made a good third.

350 c.c. Closed (4 miles).
1. C. Sgonina (349 A.J.S.-Special).
2. L. I. Davies (349 Cotton-Blackburne).
3. T. J. Thomas (Sheffield-Henderson).
Winner's time=4m. 1⅘s.

Nine started in the 600 c.c. race, but Dr. Lindsay (Norton) early forged ahead, winning by over 300 yards.

600 c.c. Closed (4 miles).
1. Dr. A. Lindsay (490 Norton).
2. A. W. Nicklen (492 Sunbeam).
3. S. Bush (490 Norton).
Winner's time=3m. 52s.

Eleven "unlimited" machines lined up, incidentally all 500 c.c. mounts except Bush's Harley-Davidson and H. Davies' Brough-Superior. Davies steered his big machine in an exceedingly capable fashion, and all Dr. Lindsay could do was to hang grimly on to second place, Bush finishing less than 100 yards behind.

Unlimited Closed (4 miles).
1. H. Davies (976 Brough-Superior).
2. Dr. A. Lindsay (490 Norton).
3. F. P. Bush (998 Harley-Davidson).
Winner's time=3m. 41⅘s.

Interspersed among the later races were one-mile sprints for each capacity class. The detailed results, below, speak for themselves. Dance won his event without difficulty; Sgonina's mount beat the T.T. A.J.S.; Harris, Dr. Lindsay, and Davies were also distinctly quicker in accelerating than their competitors. Despite the short distance, the numbers of the first three "unlimited" machines were artistically chalked up on the scoring board before the rest of the field flashed past!

One-Mile Sprints.

Championship Unlimited Class.—1, G. Dance (499 Sunbeam); 2, C. Sgonina (Sgonina Special); 3, H. Davies (976 Brough-Superior).

300 *c.c. Solo* (closed).—1, H. Harris (249 New Imperial); 2, L. I. Davies (249 Diamond); 3, W. Edwards (249 Rex-Acme).

350 *c.c. Solo* (closed).—1, C. Sgonina (A.J.S. Special); 2, W Edwards (349 A.J.S.); 3, L. I. Davies (349 Cotton-B.).

600 *c.c. Solo* (closed).—1, Dr. A. Lindsay (490 Norton); 2, A. W. Nicklen (492 Sunbeam); 3, I. Parker (492 Sunbeam).

Unlimited Solo (closed).—1, H. Davies (976 Brough-Superior); 2, F. Bush (998 Harley-Davidson); 3, Dr. A. Lindsay (490 Norton).

There were two more sidecar races, as under, the feature of the second being the plucky fight of the Douglas against the much bigger Brough-Superior.

750 c.c. Sidecars Closed (4 miles).
1. V. Anstice (494 Douglas sc.).
Winner's time=5m. 11⅕s.

Unlimited Sidecars Closed (4 miles).
1. H. Davies (976 Brough-Superior sc.).
2. J. Anstice (494 Douglas sc.).
Winner's time=4m. 42⅕s.

A light car event and a grotesquely comic race for Ford cars concluded a meeting that provided varied sport for a big, but not record, crowd of spectators, and at least one win apiece for almost all the most popular entrants.

GLASGOW OPEN SPEED TRIALS.

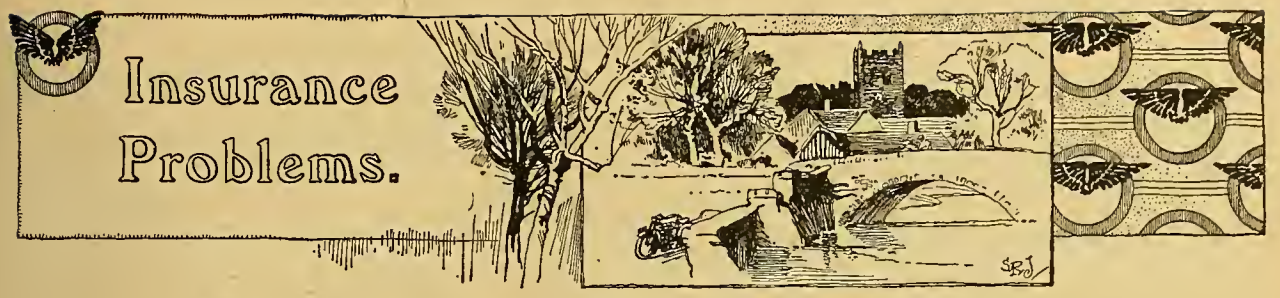
67 m.p.h for the Half Mile from a Standing Start. 175 Competitors.

ORGANISED by the Scottish Western Motor Club, Saturday's speed trials were open to both cars and motor cycles, and by permission of the Renfrew authorities were held over a straight half-mile of road at Inikinnan.

The Scottish Western people, who have proved themselves experts at running these events in the past, excelled themselves on Saturday. They electrically timed 175 competitors over the course of half a mile without a protest.

Fastest time of the day was made by A. L. Downie, of Edinburgh, on his o.h.v. A.J.S.; he covered the half-mile from a standing start at the amazing speed of 67 miles per hour. He, however, had no speed to spare in winning this coveted honour, his time being only fractions of a second better than Geo. King (another A.J.S. rider) and J. M. Philips (976 Dot).

No one man had it all his own way this year amongst the motor cyclists, but Geo. Kelly (A.J.S.), G. C. Walker (New Gerrard) and A. H. Alexander (Douglas) all won three classes each.



A Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

Paying Premium on an Amount Never Recoverable.

Mr. J. L. Sailsbury, Glasgow, writes: "When one buys a new outfit the usual plan is to give the full retail price when filling up the form, and consequently paying the highest possible premium. Considering that the price of any machine depreciates 25 per cent. immediately it has been on the road, what sense is there in paying a premium on an amount one knows will never be paid out in case of theft?"

This question is interesting, because it brings to light the other side in connection with total loss settlement. However, depreciation to the extent named by our enquirer would not be enforced by any insurance company simply because the machine had just gone on to the road. Most companies would consider that for the first month or two, unless there were decidedly aggravating circumstances, no depreciation at all, or at any rate very little, had taken place. Indemnity is required by the motor cyclist, and it is up to him to see that he places himself in such a position as to obtain it.

Insured Twice.

Mr. W. C. Smith, Farmouth, says: "I am insured with a daily newspaper which includes in its policy 'Accidents whilst riding a Motor Cycle.' Would it pay out if it knew I was insured with a company covering motor cycle accidents?"

So far as we are aware, a company responsible for the accident insurance coupon which is now such a common feature with daily newspapers would not be concerned whether a claimant had a motor cycle policy covering similar accidents, neither would the company issuing the latter policy be concerned in any insurance benefits derived as the result of the newspaper coupon insurance.

* * * *

A Lesson for the Uninsured.

Mr. R. W. Atkins, Middlesbrough, writes: ". . . The shed in which my sidecar outfit was garaged was burnt to the ground and my machine absolutely destroyed. The owner states that on the night before the fire he saw that the place was all right and doors locked, but I know that is not true. The building was insured, but not the contents, neither was there a notice exhibited stating that customers left their machines there at their own risk, nor was any mention made to that effect when I arranged to garage my outfit there. I had not insured the machine myself, and the owner of the garage refuses to help me in any manner, so I wish to know how I stand, and if it is possible to claim anything from him."

The garage proprietor is not liable for loss sustained through fire unless it can be shown that such fire occurred through negligence, and there is nothing to support this view. Even if it were true that the door was not properly fastened, it could be said that a fire was the natural consequence of such act of negligence.

* * * *

Riding at Brooklands.

Mr. A. F. Atkins, Bournemouth, asks if he is covered should an accident occur whilst driving on Brooklands in the ordinary way and not in an event, race, or an attempt at record breaking.

The usual limit placed in policies covering motor cycles is that the insurance is not effective whilst the vehicle "is being driven in any speed test," so that, provided the insured can satisfy a company that, although the accident occurs on Brooklands Track, yet his purpose was not record breaking or racing, he would be covered by the ordinary policy. In the Six Days Trials, for instance, insured competitors are covered, although they have to make several fast circuits of the track.

* * * *

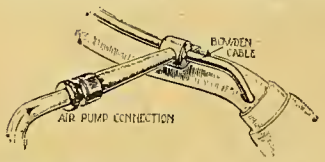
Pillion Riding.

A correspondent "J.J." says: "My motor cycle policy included third party risks up to £1,000 when I first took it out, and in addition I was insured against pillion riding. But when the next premium became due I discontinued the latter part of the insurance. Shortly afterwards I met with a slight accident, and the company says it is not entitled to pay compensation to the third party who is claiming damages, because I had a friend on the pillion seat at the time of the accident. Is this attitude of the company correct?"

You originally insured to include risk whilst a passenger was being carried on the pillion seat, and paid the extra premium for this. On renewal you did not include pillion riding risk, and, presumably, the premium payable was reduced accordingly. An accident has now occurred whilst a pillion passenger was being carried, and under the circumstances it appears quite obvious that this accident does not come within the cover granted by the policy.

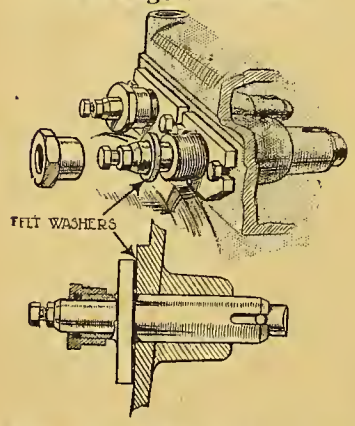
AMONG THE ACCESSORIES

Bowden Wire Lubrication.



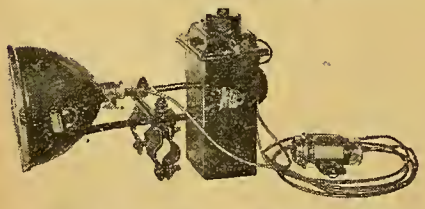
Silkily working controls are ensured by using Lloyd lubricators, the clamp portion of which is intended to be fitted permanently to a bared length of the Bowden cable: then the reservoir is filled with oil which is forced through by air pressure from an ordinary tyre pump. (T. Lloyd, 12, Bridge Street, Manchester.)

Oil Leakage Eliminated.



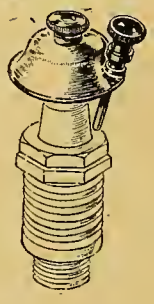
Oil leakage through and outside the tappet guides of old 595 c.c. Douglas engines is minimised by washers and packing glands, the fitting of which is undertaken by Eli Clarke, Cheltenham Road, Bristol, at a cost of 15s.

Self-contained Lighting Set.



Four-volt accumulator, tail lamp and a switch in each connecting plug are included in the W.T. self-contained lighting set marketed by the Service Co., Ltd., 289, High Holborn, London, W.C.2, at £4 17s. 6d.

Three-Purpose Plug Cover.

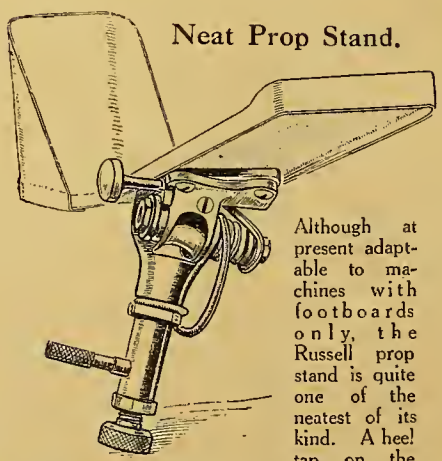


Acting as a radiator for the central electrode and a waterproof cover for the plug, the Fit Quick detachable bonnet also embodies a cut-out plunger useful for locating faulty sparking plugs on multi-cylinder engines. 2s. (The Fit Quick Motor Accessories Co., 68, Rochester Road, Rock Ferry, Cheshire.)

Labour-saving Pump Connection.

Although designed for car tyre valves, the Ideal push-on pump connection is adaptable to motor cycle sizes by inserting a piece of rubber tubing in the nozzle. 2s. (Quickways, Ltd., 30, City Road, London, E.C.1.)

Neat Prop Stand.

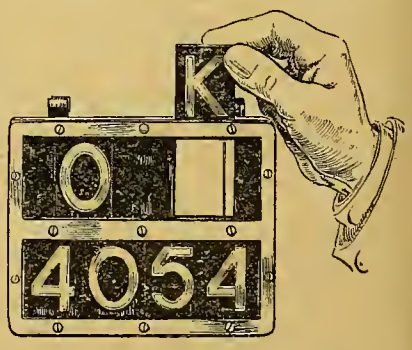


Although at present adaptable to machines with footboards only, the Russell prop stand is quite one of the neatest of its kind. A heel tap on the upper plunger releases a catch which allows it to spring out of action, while it may be brought back into use by foot pressure on the pin screwed into the leg. It locks automatically, has an adjustable prop, and weighs only 18 oz. (J. Russell, 25, Warwick Road, Earl's Court, London, S.W.5.)

Bowden Wire Adjustment.

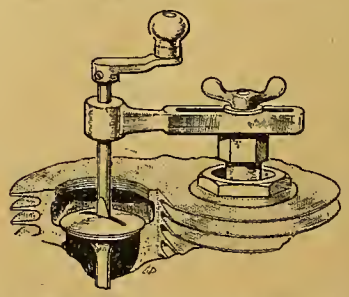
Control wire adjustment is facilitated by the Quickways method, which consists of baring a portion of the cable casing and substituting a sheath of coiled wire in which is threaded a stop, movement of which, of course, takes up slack in the wire. (Quickways, Ltd., 30, City Road, London, E.C.1.)

Built-up Number Plates.



If we ignore the obvious—and illegal—use, the chief advantage of the "Ever Ready" built-up aluminium number plate is that the local agent is able to hold a stock of numbers for use as required, and the customer may thus rely on instant delivery. (Adams Non-Ferrous Metal Co., Forward Works, Legge Street, Birmingham.)

Ensuring Valve Efficiency.



Valve grinding is a much less tedious task if some such tool as the Ewart (above) is used. The adjustable arm permits the brace to be centred and thus equalises pressure on the valve face. (New Ways, Ltd., 132, Middleton Hall Road, King's Norton, Birmingham.)

Speed judging at the Bristol M.C. and L.C.C. "mystery" trial. A competitor attempting to ride at 18½ miles an hour for an unknown distance, which in this instance turned out to be only 300 yards.

Isle of Wight M.C. and L.C.C.

Fastest time of the day at the club's recent hill-climb on a 1 in 4 rise was made by W. H. S. Collins on a Harley-Davidson.

275 c.c.—Two-strokes: 1, A. J. Rust (269 O.K. Junior); 2, C. Langford (269 Sparkbrook).

350 c.c.—1, J. R. Morris (348 Raleigh); 2, C. Langford (348 Douglas).

500 c.c.—1, C. F. Stagg (494 Douglas); 2, E. G. H. Morris (490 Norton).

750 c.c.—1, C. F. Stagg (494 Douglas); 2, D. Oliver (650 Zenith); 3, M. J. Rumsey (499 Triumph).

Unlimited.—1, W. H. S. Collins (989 Harley-Davidson); 2, H. W. Linington (976 Royal Enfield); 3, C. F. Stagg (494 Douglas).

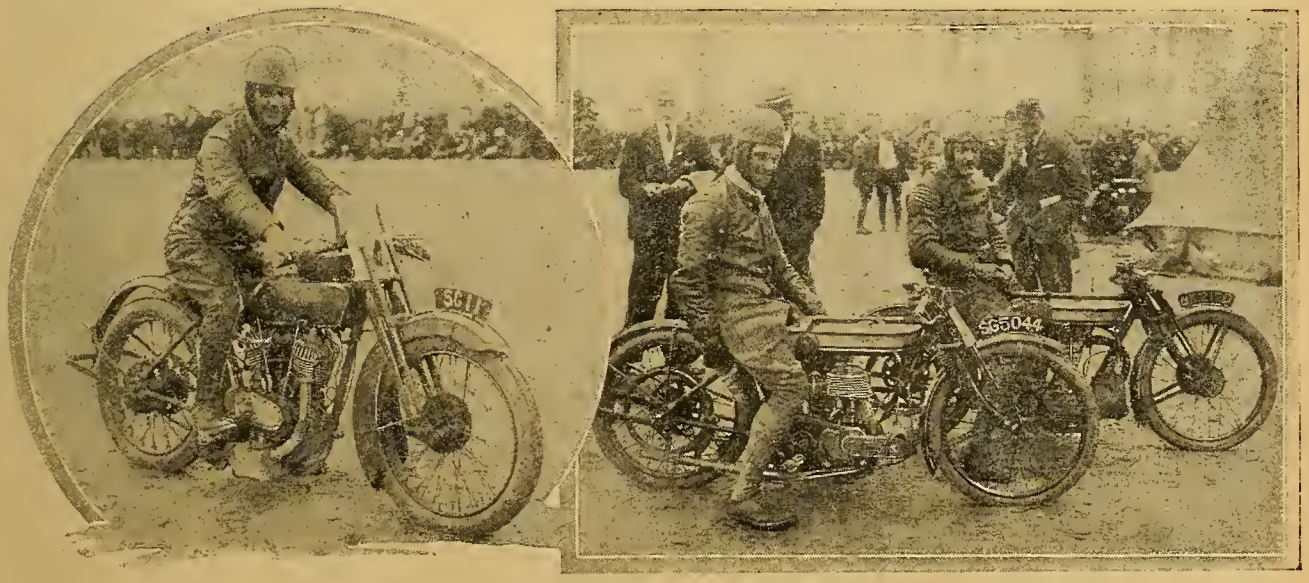
600 c.c.—Sidecars: 1, J. H. D. Allen (557 B.S.A. sc.).

Unlimited Sidecars.—1, C. W. Brannon (976 Royal Enfield sc.).

Oxford M.C.

Competitors in the "Stop-and-out-of-it Trial" had to cover a 30 mile circuit in the Chilterns—a route of some hills and many surprises—which brought them back to the starting point. Their time was taken in passing, and they were sent on to complete another lap of the same course, which had to be completed in the same time. This is no novelty, but an innovation was a secret check at which times were taken on each lap. This time again should have been the same as on other two for speeds and distance were the same on each circuit.

There were numerous mishaps. F. J. Findlater (Triumph), after completing the first circuit with a pillion passenger, punctured on the second. The star performer was S. Hancox (490 Norton), silver medal, total error 2m. 18s.; 1st bronze, H. Cripps (550 Triumph), 6m. 47s.; 2nd bronze, E. F. Sheldon (348 Raleigh), 15m. 3s. No sidecar machine finished the course. Several cars also competed with varying degrees of success.



SCOTTISH SPEED CHAMPIONSHIPS.

Geo. Grinton (989 c.c. Harley-Davidson), winner of the Heavyweight Championship.

Norton experts. On the left is Graham Black, who was unsuccessful against Grahame W. Walker (right) in the 560 c.c. handicap.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

350 SUPERFLUOUS C.C.?

Sir,—The speeds attained in the T.T. races, bringing home to us the possibilities of the small and medium modern machine, must surely make the thinking man wonder why anyone should want a 1,000 c.c. engine for solo use. The various letters on the subject that have appeared in your columns from time to time have struck me more as the efforts of men who are seeking to excuse themselves for the practice than as plain statements of their reasons.

For some years past I have ridden a touring 350 c.c. mount (on which I can easily do 60 m.p.h., even under slightly adverse conditions) whose acceleration is enough to slide me off the saddle if I do not grip the bars firmly; and more than ever I fail to see how any sane man can want an engine three times as big.

I should like any of your readers to give me one good reason why I should not continue to regard "big-twin-itis" as a form of lunacy which has, at present, no medical name.

S. Rhodesia. B. PYGSBOTHAM.

AVERAGE SPEEDS ON A 350 c.c. MACHINE.

Sir,—Having just completed a thousand-mile tour on my 350 c.c., 3-speed, clutch-model Douglas, I feel that, in fairness to the machine, I must set my experience against that of Mr. L. W. White. My machine had 2,000 miles to its credit before commencing the tour, but the only preliminary attention was to grind valves, put fresh oil in the crank case, and just to look over machine externally. The ground covered was practically all Devonshire, including North Devon, from Porlock to Clovelly, carrying a nine-stone pillion passenger. Never once did the engine lose power through overheating; it ran "like a train" all the time, and an excellent average speed was maintained. On returning from Devonshire, I did the journey of 130 miles (with passenger) in five hours, an average of 26 m.p.h.

Personally, I should not hesitate to attach a light sidecar to my machine if I wished, but I should not hope to *average* 35 m.p.h., although I think that for a "burst" the outfit would do "40" easily, and would average about 22 or 23 m.p.h. "DOUGITE."

Abingdon.

Sir,—Though not, at the moment, a motor cyclist, I am a regular reader of *The Motor Cycle*, and my experience, such as it is, dates back to 1905.

With regard to Mr. J. R. Jones's statement, that he can average 30-35 m.p.h. on a 350 c.c. Douglas with loaded sidecar, I fancy that it will need more than his unsupported word to convince your readers.

I believe that it has been stated that in order to average a certain speed for a journey of any length on the road, involving the passage of towns, etc., the rider's mount must be capable of a maximum speed approaching to double the desired average. A proportion of Mr. Jones's route, the road round Newport, is not in the best of condition, as I discovered to my sorrow on a recent trip from London to Spital, which is a few miles short of Birkenhead.

The A.A. gave the distance as 198 miles, which I covered in 6½ hours dead, thus averaging 30.4 m.p.h., my familiarity with the road alone enabling me to put up this modest performance, and on much of the road speed is impossible. Until I read of Mr. Jones's average I flattered myself that I had not done so badly. My mount was a 1920 Vitesse-G.N. F. L. B. DYNE.

Sir—I have read Mr. J. R. Jones's reply to Mr. Williams, and am, I am afraid, still sceptical. Is Mr. Jones riding a 1939 Douglas, or does he judge his speed by the apparent rate of the engine, *i.e.* by the noise?

I have owned nineteen different machines, many of them big twins, and on none of them have I been able to average anything like 35 miles an hour for a journey of 100 miles with loaded sidecar. Does Mr. Jones realise that in places on the route he mentioned he would have to travel for considerable stretches at 60 m.p.h. to keep up the average of 34.2 miles?

If his bike can do this it is "some" 'bus and has "some" rider. L. C. STUART.

Sir,—Mr. J. R. Jones's (the 350 c.c. Douglas rider) average reminds me of one run I made from Leicester to London. On leaving home my wristlet stood at 8 a.m., and on arrival in town it was 10.25 a.m. The fly appeared in the ointment when, half an hour or so later, I looked again—the watch still said 10.25!

Personally, I find that I get a good average by adding 10% to the distance I've been, and subtracting 10% from the time taken. B.I.A.J.S.

Leicester.

UNCERTIFIED ELECTRICAL TIMING.

Sir,—In regard to the electrical apparatus for use on hill-climbs described recently, and also the device used for short distance records at Brooklands, there is one point which seems to require some further safeguard.

Electrical indication of the precise moment of a vehicle crossing a line is no doubt advantageous, as there is no personal variation, no question of delayed observation, nor of premature reading, and, moreover, the indications are permanently on record for verification. But though the elimination of the personal element and the possible errors of observation is all to the good with a trustworthy recording device, surely it is important that the clockwork by which the interval between these accurately observed moments is measured should be of the highest class and certified as accurate?

It is insufficient to observe accurately the moment of the passing of the vehicle over two tapes if the recording instrument measuring the interval of time between those two moments is not accurate also. The electric signal may be a refinement on the human observer, but is the clockwork associated with these electric timing devices as high grade as the chronographs hitherto obligatory for official timekeepers to possess? Possibly it may be, but it would be more satisfactory to know that this vital part of the electrical timing system was the subject of an independent certificate of behaviour, and also subject to an annual revision of its continued good behaviour.

The watches of official timekeepers are quite rightly independently certified at the National Physical Laboratory as reaching a high level of excellence. The Kew test, as it is called, is vital before a watch may be used. But neither in regard to the clockwork at Brooklands, nor the clockwork now offered on loan by Messrs. Ferodo, Ltd., does it appear that any independent certificate of their behaviour or "rating" has been made.

If we are seeking for a higher degree of accuracy in the method of operating an instrument, we ought at least to make certain that the instrument to be operated is of the same level of excellence as the certified watches hitherto

compulsory for official timekeepers. It does not suffice to make a watch acceptable to say it was made by a good maker; it has to pass an independent examination. To make the clockwork mechanism on which the device depends equally acceptable, it should be subjected to a similar independent original examination and certificate of merit, and require a subsidiary annual revision. INTERESTED.

London, N.W.11.

HANDLE-BAR WATCH TROUBLES.

Sir,—In your issue of July 20th, you published a letter from Mr. D. W. L. Awburn, which greatly interested us.

We can understand a watch being damaged by excessive vibration, or driving over "pot-holes," etc., and, as a matter of fact this is the fate of most watches used on motor cycles.

It is surprising to learn that a watch in going condition would not start of its own volition, after being subjected to vibration from "pot-holes." If this watch happens to have been an Ingersoll, we shall be interested to hear direct from Mr. Awburn, who apparently has a curiosity.

During the war, a watch mechanism was required for a highly important defensive purpose. We understood from the authorities that most of the well-known brands of watches had been experimented with, but the Ingersoll was the only one found to be a self-starter. As a self-starter was the essential feature of the watch mechanism required, Ingersoll watches were exclusively used. We are, of course, unable to divulge what the mechanism was, but let it suffice to say that it could not be agitated in order to induce the movement to start. To use a motoring expression, the mechanism had to start from cold.

THE INGERSOLL WATCH CO., LTD.,
P. J. MORREN, Director.

WHAT IT COSTS TO TOUR.

Sir,—I beg to thank the various correspondents who have replied to my letter. The fact that motor coaches, lying practically idle all winter, can still make a profit for their proprietors by summer touring at 30s. downwards per day per head, "putting up only at the best hotels," shows that reasonable hotels are to be had if only one knew how to find them. And for the life of me I cannot understand why such hotels capable of catering for motor cyclists do not advertise in the paper read weekly by them all.

Since my first letter I have made a discovery which bids fair to solve the difficulty. It is the "Michelin Guide," published at 5s. This book not only gives plans of all towns of note with names of the streets, clearly showing one the way through them, and also the location of places of interest, but also gives a list of hotels with, in most cases, their tariffs.

With this book in hand a tour can be planned and the maximum cost of it known in advance. If cheaper accommodation can be found *en route* then so much to the good. Unfortunately, the tariffs of some hotels are not given, and these I should avoid, in which case if I were touring in the district mentioned by Mr. Scroggs I should have failed to avail myself of the two very reasonable ones he gives, as, although these are given in the guide, their tariffs are not.

When on the tour of which I complained, one night we came up to an A.A. hotel so tremendous that we dare not venture in; instead we chose one less pretentious. On looking up in the guide I find that if we had put up at the very large one we should have been a few shillings in pocket.

I figure it out that a tour can be planned with the help of the guide to cost for two persons: Bed, 6s. to 10s.; breakfast, 5s. to 6s.; lunch, 6s. to 7s.; *i.e.*, total, 23s.; so that tea, petrol, and all minor extras (leaving out wear and tear) can be met out of £2 per day.

I have to-day shown the guide to a non-motoring friend of mine who has often put up at some of these hotels when away on business, and he assures me that the price he has paid is much below the tariff as given in the guide. How much longer are mine host and others going to be before they realise that motoring is no longer the exclusive sport of millionaires? And that there are heaps of motorists who, like myself, have to deny themselves all other luxuries indulged in by their non-motoring friends, which in the aggregate come to more than the expenses of upkeep?

A. S. KING.

Sir,—Having recently completed a tour of 1,015 miles on a 770 c.c. B.S.A. sidecar outfit, I am able to record that my experiences on the subject of costs are entirely different from those mentioned by Mr. King. My tour was:

1st day, London-Birmingham.
2nd day, Birmingham-Hereford.
3rd day, Hereford-Bristol.
4th day, Bristol-Lynmouth.
5th day, Lynmouth-Camelford.
6th day, Camelford-Penzance.
7th day, Penzance-Plymouth.
8th day, Plymouth-Exeter.
9th day, Exeter-Bournemouth.
10th day, Bournemouth-London

The average petrol consumption being 50.4 m.p.g., this item works out at £2 10s., or 5s. per day; three quarts of oil for the entire trip is a negligible item.

From a point of view of economy, combined with convenience, my passenger and myself decided to adopt the plan of having a somewhat frugal lunch after the precaution of a substantial breakfast. Then, avoiding lavishness, on the one hand, and risk of discomfort, on the other, we chose two-star A.A. hotels, except on the fifth night, when the town only boasted one hotel, and that a one-star (but I am compelled to add that in this instance we were shown greater courtesy and fared more sumptuously than at much more pretentious places).

It will be seen by referring to a map that the daily mileage was 95-100, which allowed arrival in the early evening having visited show places *en route*. Dinner then proved welcome, but the grill-room was selected, where available, and in every case proved advantageous.

To sum up, we found at the end of our journey that we had spent roughly £1 per day each, excluding wayside "lubrication" as needed, but including petrol.

London, W.6. FIRST-YEAR TOURIST.

THE A.C.U. AND THE SOUTHSEA SPEED TRIALS.

Sir,—I gather that the A.C.U. in its wisdom has banned the motor cycle racing at Southsea on August 23rd. I should like some explanation of the motive, as to many of us here it seems but an effort to strangle the sport at its birth in this district.

The sport of organised motor cycling is non-existent in South Hants, which has 300,000 inhabitants, and a determined effort was to have been made after this event to bring ourselves in line with other parts of the country, and form a real, live sporting club. The A.C.U. has had the pleasure of killing that idea.

It meant great effort, against great prejudice, to get the races organised as an exhibition of what the modern motor cycle is capable of, and the educative effect would have been great.

All time, trouble, and effort has been wasted, and the local hospital robbed of a goodly sum.

I suppose the A.C.U. will trot out the Six Days' Trials.

Surely it is interfering with personal liberty, and also very childish, to say, "If you don't play with me you shall not play at all"?

Gosport. NOT A MEMBER OF THE A.C.U.

VALVES THAT CONTRACT WHEN HOT.

Sir,—In reply to your correspondents who write on the subject of valves which do not expand with heat, I think that I am correct in saying that all such valves are made from special material which gained strong favour during the war.

I believe that I was one of the first motorists to use valves of this kind. Somewhere about 1912 (after experimenting over a number of years with steel suitable for valves) I first used a steel containing "Wolfram," which we then called "unshrinkable steel." I found this was quite a success, so turned up a valve and took it to the Show, hoping to *give* some of the manufacturers a good tip, but I found these latter gentlemen knew all there was to know about steel, and I got everything from laughs to insults. A few years later that great alarum (war) went off and some people woke up.

Many years ago I had an engine—the product of one of our foremost engine manufacturers—that was the very dickens on valves. If I tried to overtake a rabbit, the indiscretion cost me the price of a valve. My pockets bulged with these most necessary parts when I turned out for a long run. I got so fed up that I began making my own valves, which were successful. I then wrote offering to *give* the manufacturers of my engine some forgings for trial; these were refused as they "turned all their valves from the bar." Ye gods! P. H. DUDLEY.

ROAD PATROL SALUTES.

Sir,—I am in full agreement with "40144 or Thereabouts." One *does* wonder if all is well when the patrols fail to salute.

If saluting is only "cheap homage," why are we told in the "A.A. Handbook" to stop and ask the reason why a patrol has not performed this duty? HARLEY-D.

Westcliff-on-Sea.

HAMPERING GOGGLES.

Sir,—I was interested to see "Sutton Banks'" remarks on this subject, for I, too, am troubled with slight loss of hearing when wearing goggles. I have now found an efficient substitute for goggles in the shape of "Pidko" cap fitted with a celluloid peak, which lets down over the eyes. This peak, when not in use, folds inside the main peak of the cap. Usual disclaimer. C. S. BURNEY.

Sir,—If "Sutton Banks" has not tried a C.G.P. screen I would unhesitatingly recommend him to do so.

I also like to maintain a fair speed, but until acquiring one of these eye screens had to be content with ordinary goggles, and suffered the same trouble as your correspondent.

Usual disclaimer. J. P. HOGAN.

GEAR CHANGING PROCEDURE.

Sir,—I agree with "Triumph-4 h.p." that changing gear on the exhaust lifter is much easier, but would qualify this, in that this is correct only when changing up.

Of course, the box under discussion is the Sturmey-Archer, in which that primitive device, sliding pinions, is eliminated. I also use one of these boxes, and find that changing up on the exhaust lifter is perfectly easy, noiseless, and can be effected without any jerk after very little practice. Changing down on the clutch, besides being theoretically correct, is also perfectly simple—and simply perfect.

However, I have had doubts as to the advisability of using the exhaust lifter, and, like "Triumph 4 h.p.," would welcome some authoritative advice on the subject. Perhaps the Sturmey-Archer people themselves would oblige us? I am sure the very large number of users of this fine article would much appreciate some guidance from its makers.

London, N.W.2. ZEBRA.

GUILDFORD HILL.

Sir,—Living in Guildford, and being a motor cyclist, I would like to protest against the text of the letter signed "Old Man Hep."

There are several nasty turnings into Guildford High Street, and the police are quite right in their attitude; they are, I may say, very lenient with the speed merchant, as I know well.

I should like to meet that famous single-gear Antoine that will go up the street in question at 12 m.p.h. I very much doubt if it would get up at all unless a speed of 20 m.p.h. was maintained. FAIRPLAY.

Guildford.

Sir,—With reference to Guildford Hill, I was of much the same opinion as "Old Man Hep" until I came to live in this town.

The famous High Street on closer inspection is found to contain numerous side alleys which are too narrow to be noticed when driving through. These are largely used by tradesmen's and carriers' vans on market days, and the speed limit is an endeavour to make the street safe on these occasions. Naturally the regulations must be enforced all the time or not at all. A detailed street plan would, I think, be a revelation to any casual week-end motor cyclist who has passed through the town.

Local chauffeurs have been known to declare that they would rather drive in London than in the High Street on a Saturday morning.

The police are quite human, and are apt to be misled by noise and appearance.

The activity here provides cases with witnesses at a minimum of trouble for the local sessions. Perhaps your valuable paper might compare "police activity" with a "law calendar," and give weekly forecasts of "unsuitable touring conditions" in various districts. NB-3235

Guildford.

REJUVENATING OPERATIONS THAT PAID.

Sir,—Perhaps some of your readers may be interested to know that I have been able by an expenditure of between £10 and £12 to improve very greatly the efficiency of a ten-year-old clutch model Triumph, such as may be bought second-hand for £25 to £30.

First, I fitted a Philipson pulley (touring strength) with a handle-bar control; the left-hand pedal was made to hang permanently down so that it could still be used for mounting. It could not be allowed to revolve, as it would foul the governor of the pulley, but the right-hand one was retained as a kick-starter.

I found the pulley had improved the machine's hill-climbing power, but still it was very awkward to get slow running in traffic with the old two-lever carburetter. I accordingly decided to invest in a Binks three-jet carburetter, and by using jets Nos. 000, 3, and 7 have now got a machine that will just tick over on a gear of 4.7 to 1, and goes with ease up hills in South-east Kent that were quite beyond its capacity before. A long exhaust pipe which I also had fitted has enabled me to do away with the large holes at the end of the silencer which when in use made the machine noisy.

Everyone knows what good machines these early Triumphs are, and I personally feel very pleased not to have had to spend at least £60 to get the results that I am now getting. I need scarcely say that I have no interest in either of the above firms. G. C. ROBERTS.

SUSTAINED HIGH AVERAGE SPEEDS.

Sir,—Having just purchased my seventeenth motor cycle since demobilisation in 1919, I think it may interest your readers to know why I decided this time on a Scott-Squirrel.

I have owned all classes of "'bus" from lightweight to 1,000 c.c. twin, and as my job entails a tremendous lot of travelling all over the southern part of the country, and usually well away from railway stations, it is absolutely necessary to have a *really reliable 'bus;* also, owing to the fact that I often exceed the 200 miles a day mark, besides making calls, I must have a machine that keeps up a sustained high average speed. I have found a Scott-Squirrel pretty well unique in this respect.

I do not suggest that it is the machine with the highest maximum speed by any means, but I do say that for really fast road work it is indeed a very fine rider who will corner regularly on an ordinary motor cycle at the same rate as an ordinary rider on a Scott. Further, a big mileage daily these days, with the roads in the state they are, makes comfort a *sine quâ non*, and here again a Scott with 3in. tyres stands on a level with any spring frame cycle on the market.

I am very keen on competition work, and regret that I cannot afford a stud of machines; but here again, with a Squirrel, I have a mount that will do the knots, maintain the knots day in, day out, and still win me medals when the opportunity offers.

I have no interest whatever in the Scott Company.

Cardiff. WATER-COOLED.

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle.*

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Eighth Edition. Price net, 2/-. By post, 2/3.

"MOTOR CYCLE REMINISCENCES."
By "Ixion," of *The Motor Cycle.*
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

THE FIRST 4 H.P. TRIUMPH.

What was the date when the first 4 h.p. Triumph motor cycle appeared on the British motor cycle market?—C.M.

The 4 h.p. Triumph (550 c.c.) was marketed in the year 1914, being exhibited at the Olympia Show of November, 1913.

ENGINE POSITION.

Could you inform me as to the position of the engine in relation to the frame, wheel-base, etc., so as to get the correct balance. The engine is a 499 c.c. Blackburne single.—R.M.R.

There is no special position for the engine in relation to the frame and wheel-base which can be said definitely to be correct. The matter is one for experiment, and testing, and you should aim at keeping the centre of gravity of the whole machine, together with that of the rider, as nearly as possible in a central position between the two wheels, and as low as possible.

VARYING RATIOS FOR SOLO OR SIDECAR.

On my old twin I rode solo (4 to 1 top gear) almost as much as sidecar (4¾ to 1). I now contemplate buying a chain-cum-belt Triumph, and wish to use the best gear ratios for each purpose and to effect the change periodically with the minimum of difficulty, but the makers tell me that it necessitates changing the engine sprocket, probably the chain, and shifting the gear box, with consequent adjustment of belt. This is too much trouble. Is the belt pulley on the Triumph their own or a Sturmey-Archer production? Would it be possible and practicable to have an adjustable one in its place? There is little difference between Triumph solo and sidecar standard gears, viz., 5 to 1 and 5½ to 1; and I am inclined to think that a higher solo gear, 4⅔ or 4¾, might be used with advantage. If the choice has to fall on one set of gears permanently which, for my purposes, would you recommend?—J.E.

The belt pulley on the chain-cum-belt model Triumph is a part of the Sturmey-Archer gear box, and it would be quite impossible to fit an adjustable pulley in its place. We would recommend you to have a top gear of about 5¼ to 1, as the Triumph engine is more efficient when running at a fairly high number of revolutions. Even with this gear ratio you would find it quite fast enough for all ordinary solo purposes.

TECHNICAL FORMULÆ.

I understand that up to about 60-80 m.p.h. the following formula gives the air resistance of a moving body:—

$R = K A V^2$

where R = resistance in *lbs.*
K = constant
A = effective area in *square ft.*
V = velocity in feet *per second.*

Will you please let me have the following information: (1) Value of the constant K; (2) A reasonable value to assume for A in the case of (a) Triumph solo and (b) Matchless standard sidecar outfit; (3) What is a reasonable value in lbs. per ton for the road resistance to a motor cycle's progress on the level (a) on a good, dry tarmac road, (b) on a stony and dry surface, such as that of Kop Hill at the present time.—W. H. H.

(1) In the formula you wish to use—K=.0014 if V is in feet per second, or .003 if V is in m.p.h. These figures are approximate. (2) The figures for A are very uncertain; we would suggest 10 sq. ft. for (a) and 20 sq. ft. for (b). (3) Resistance = weight × T. T is very variable but we would suggest in example (a) that it equals 0.015 approximately. It is still more difficult to judge the value of T in the second case, as it depends so much upon a particular degree of roughness in the nature of the road surface. Try T=0.06.

INTERMITTENT MISFIRE.

How long should a magneto run before it requires remagnetising? Mine is a Bosch, and it has been running on a 976 c.c. J.A.P. engine since 1913. It has run very well and without trouble until recently, but now and again I get a misfire, and as I have tried various plugs, and everything else seems in order I begin to wonder if it could be the magneto. Has the carburetter (an Amac two lever) anything to do with this trouble? It has been working the same length of time. Would you advise me to try a new one?—J.H.K.

It is not likely that lack of magnetism is causing the temporary misfire, since, if the magnets were weak, you would get a poor spark all the time. It is more probably that you are suffering from an air leak in the induction pipe, a temporary choke in the petrol system, or an air leak in the petrol tank.

ENGINE RACING ON TOP GEAR.

When running an A.B.C. motor cycle in fourth gear at anything over 22 m.p.h., the engine runs perfectly, but below that speed it runs very unevenly, apparently missing every third or fourth stroke. The carburetter is the Claudel supplied by the makers. How can I improve the slow running of the engine on top gear? Would a change of carburetter effect an improvement? Of course in the lower gears I can get it to run well at low speed, but I do not like the grind of low gears.—J.W.D.K.

Probably your trouble is caused by air leaks in the induction system, or possibly by inlet valves which are slack in the guides, causing an exactly similar effect. Go over any pipe connections very carefully, and, if necessary, try the effect of binding with insulating tape, which should cure your trouble without the expense of changing carburetters. We take it that your magneto points are in good order, and your plugs are both of the same type and of first class make.

Important Dates.

Sat., Aug. 12th—B.M.C.R.C. Members' Meeting at Brooklands.

Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.

Sat., Aug. 12th, Motor Cycle Races in Phœnix Park, Dublin.

Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.

Fri., Sept. 15th, to Mon., Sept. 18th—Anglo-Dutch Trial in Holland.

Sat. Sept. 16th—The Scott Trial.

Sat., Sept. 23rd—500 Mile Race at Brooklands.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd.—Olympia Motor Cycle Show.

READER'S REPLY.

A TWO-STROKE RATTLE.

My own opinion is that it is now definitely agreed that the usual two-stroke rattle which occurs when the engine is revving is caused through slack connecting rod bearings, even a suspicion of play sometimes causing this; but there is another rattle which sometimes occurs, and it is quite distinct from the other.

I was at one time troubled with a rattle in my two-stroke engine exactly as "H. K. S." describes. If allowed to continue it rose in intensity until it could be felt through the grips. This was liable to occur at practically any speed over 10 m.p.h. It always occurred when driving against a head wind, and was persistent: but on hills it only lasted for a short distance and then died away. It usually could be cured either by closing the air lever slightly, or in some cases if noticed at once by retarding the spark. I should have put this down to a weak mixture knock but for the fact that for the 5,000 miles the machine was driven this last winter between two overhauls it was impossible to get a recurrence of the symptoms.

Since the last overhaul, about two months ago, the trouble has recurred. It is not caused by pre-ignition, slack bearings of flywheel, or sticking rings, while the same piston is still in use. If any readers have had any experience with a similar trouble I should be glad of their opinions, for it appears that the only definite way to locate the trouble is by elimination, i.e., alternately trying new parts such as piston, cylinder, etc., which is too costly for a private owner. H. B.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"E. P." (Norwich).—Suitable machine, running costs, equipment, etc., for a taxi-sidecar.

"N. E. R." (Leeds).—496 c.c. Martinsyde "Sports" model.

"H. J. F." (London).—Best mechanical pump; Binks' carburetter on 499 c.c. Sunbeam solo.

"J. H." (Dalston).—481 c.c. Scott Squirrel and sidecar; 499 c.c. Dunelt and sidecar: speed, m.p.g., hill-climbing capacity.

"N. E. P." (Bristol).—557 c.c. B.S.A. and sidecar: carburation.

"R. F. B." (Weston-super-Mare).—349 c.c. A.J.S. solo and sidecar; 398 c.c. A.B.C.

"M. T. R." (Carlisle).—Ner-a-car: speed, m.p.g., reliability, etc.

"R. A." (South Shields).—398 c.c. A.B.C.: reliability, upkeep, specd.

Grand Prix Equipment.

Both Bennett (Sunbeam) and Davison (Levis) used K.L.G. plugs when they won the 500 c.c. and 250 c.c. classes, respectively, in the French Grand Prix.

Magnetos in the Grand Prix.

Riders in the Belgian Grand Prix, including G. S. Davison, the Levis exponent, speak highly of services rendered by the E.I.C. magnetos fitted to their machines.

32,000 Miles without Decarbonisation.

In an article entitled "Lubrication Tests," in the July 27th issue of *The Motor Cycle*, an Excelsior engine was described as having completed 3,200 miles without decarbonisation. The makers now tell us that the figure was intended for 32,000.

Sidecars and Accessories.

Readers interested in sidecars and accessories are invited by "Rideezi" Sales, Ltd., to visit their works at 5, Victoria Street, London, S.W., during the usual business hours. The firm have recently concluded arrangements with Coleford Motors (Sidecar Body Co.), 25, Upper Clapton Road, E., to absorb their entire output of complete sidecars, bodies, chassis, and accessories.

Price Reduction.

Dating from the 1st inst. the prices of Duzmo motor cycles are reduced by 13 per cent. The prices for the single-speed sports model, the three-speed touring, the three-speed super sports, and the big twin three-speed touring model are respectively £70, £100, £107, and £128. The machines are designed and manufactured by J. Wallace, Cedar Road Works, Enfield Highway, Middlesex.

Good Lubrication.

Price's Huile de Luxe was used by G. S. Davison, the Levis exponent, both in the Lightweight T.T. Race in the Isle of Man this year, averaging 50 m.p.h., and again in the French Grand Prix, when he succeeded in maintaining an average of 53 m.p.h. in the 250 c.c. class. His performances are reviewed in a booklet issued by Price's Co., Ltd, Battersea, London, S.W.11.

Wanted—A Passenger.

A correspondent is desirous of getting in touch with a passenger for a 14 days' tour of the Lake district, commencing on Saturday, August 26th. The writer is Mr. H. C. Jess, residing at 1, Eversley Terrace, Green Lane, Goodmayes, Essex, and any reader considering his proposal should communicate with him at that address. Mr. Jess adds that he is 33 years of age with 12 years' motor cycle experience.

Successes in Italy.

In the 631 mile race for the Ravelli Cup in Italy on July 22nd and 23rd F. Opessi and A. Tatici (499 Triumph) tied for first place in the 500 c.c. class; they were third and fourth in the general classification.

Found on the Road.

A lady's left-hand new kid glove on the Stratford Road, near Shirley Racecourse, on July 29th, found by Miss M. Jarrett, 218, Addison Road, King's Heath, Birmingham.

Trade Support Next British Industries Fair.

Having agreed to support the British Industries Fair (Birmingham). 1923, the British Cycle and Motor Cycle Traders' Union has now advised its members that they are at liberty to exhibit.

Revised Award.

L. E. Clulee, who rode a 269 c.c. Allon in the M.C. & A.C. 24 hours' reliability trial from Birmingham to Holyhead and back, has now been awarded a gold medal in place of the silver one as previously announced.

That Silencer —— !

C. P. Wood on a Scott Squirrel made fastest time in the Scottish Medium Weight Championship at St. Andrews on Saturday last, but was disqualified owing to the fact that his exhaust pipe did not conform to the Scottish A.C.U. regulations.

Building Extensions.

Owing to recent extensions in the factory accommodation, the Robini Manufacturing Co., of 1 and 3, Tulse Hill, Effra Road, Brixton, S.W., makers of sidecars and light car bodies, etc., are now able to carry out a greater amount of work at lower rates. In addition to the above-mentioned lines, the firm specialises in various renovations and accessories.

Road Improvements.

Volunteers are required by the Road Improvement Association to undertake survey work in connection with road improvements. The Association, the address of which is 15, Dartmouth Street, Westminster, S.W.1., is preparing schemes of road improvements for submission to the local authorities, and to the Ministry of Transport.

Change of Address.

As from the 1st of this month the address of Melchior, Armstrong and Dessau will be 15, Newman Street, Oxford Street, London, W., for showrooms, spare parts, stores and offices, whilst the registered offices have been removed to 111-113, Great Portland Street, London, W.1. All enquiries relating to "Henderson" or "American X" machines should be forwarded to Newman Street.

Catalogues Received.

Petro-Flex Tubing Co., Ltd., Cassiobury Works, St. Albans Road, Watford: A pamphlet detailing the advantages and uses of the Petro-Flex fuel and oil piping.

Denton's Specialities, 53, Newland, Northampton: Literature dealing with Denton's cast iron soldering fluid, cast iron brazing flux, and standard soldering fluid in three grades.

Douglas

Beats Them All!

THE WORLD'S FASTEST STANDARD MOTOR CYCLE and the FIRST TO DO 100 M.P.H. in the 3½ h.p. and 6 h.p. classes.

SCOTTISH CHAMPIONSHIP CAPTURED FOR THE FIFTH TIME,

against the world's best riders.

A. H. Alexander, riding a 2¾ h.p. Douglas, achieved an exceptionally fine performance against a field of 25 of the best of riders and many makes of machines, winning by no less than half a mile. The extraordinary consistency of the Douglas may be judged by the fact that in

1919 it won the **350 c.c. CHAMPIONSHIP.**
1920 ,, **350 c.c.** ,,
1920 ,, **500 c.c.** ,,
1921 ,, **500 c.c.** ,,
1922 ,, **350 c.c.** ,,
1922 second in the **500 c.c. CHAMPIONSHIP.**

It also holds the

500 c.c. BRITISH CHAMPIONSHIP,
750 c.c. ,, ,,
and the
1000 c.c. GERMAN CHAMPIONSHIP.

SENSATIONAL PERFORMANCES were also made at Brooklands, E. W. Spencer on his 3½ h.p. Douglas gaining the **CLUB CHAMPIONSHIP and GOLD CHALLENGE CUP** against all the cracks.

C. G. Pullin, **FIRST** in the **350 c.c. Handicap**, winning at an average speed of 73·01 m.p.h. from a standing start on a little 2¾ h.p.

FIRST in the **500 c.c. class Team Race.**
SECOND ,, **350 c.c.** ,, ,,
And R. Newitt **THIRD** in the **500 c.c. Handicap.**

Clipstone Speed Trials, Fred Hatton made third fastest time of the day, being beaten by only 1000 c.c. machines, covering the Flying Half Mile in 20 seconds, equalling 90 m.p.h.

Still upholding our claim that the Douglas is the fastest standard machine, and the first motor cycle to do 100 m.p.h. in the 3½ h.p. and 6 h.p. classes.

DOUGLAS MOTORS LTD.,

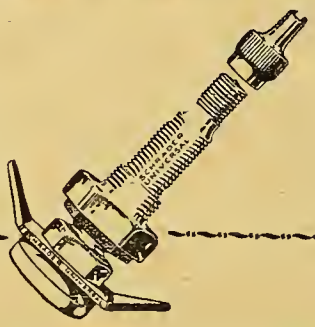
No. 6.

Ease of Inflation

AFTER all, tyre trouble implies pumping. With "Schrader" valves on your tubes, you can use the garage power pump, and what is more "Schrader" valved tubes don't need nearly so frequent inflation as the old type cycle Valve.

Schrader Universal BRITISH MADE TYRE VALVE



A. SCHRADER'S SON, Inc. British Factory: Victoria Road, Willesden Junction, London, N.W.10. Manufacturers of the "Schrader Universal" Tyre Pressure Gauge.

Be sure it's a "Schrader"—Look for the name.

"STRENGTH WITHOUT WEIGHT—YET STRONGER THAN THEY NEED BE."

We are the sole wholesale distributors for Great Britain and Ireland of these popular Vulcanised Fibre Expanding Carrier Cases.

WEARPRUFE CARRIER CASES

Solve your Luggage Problem by getting the case which embodies the following unique points:

(1) Lightness with Strength.
(2) Waterproofness and Indestructibility.
(3) Perfect protection by aluminium-faced 3-ply battens from all frictional wear.
(4) Variable capacity.
(5) Ingenious, yet fool-proof, bridal leather strapping.

18 in. x 11½ in. x 6 in., **27/6**; 14 in. x 10½ in. x 6½ in., **26/-**.

Specify Ferodo Brake Blocks on your new mount.

Prior to the introduction of Ferodo Brake Blocks for motor cycles, one set of blocks lasting throughout a long race was practically unknown.

Now it is the usual thing for riders in the big races to use only one set of Ferodo Brake Blocks for both practice runs and the actual race.

This is because Ferodo Blocks are made with the same care as Ferodo Friction Linings. They give the same efficient service—the same remarkable wear—and they never split in use.

Ferodo Brake Blocks can be fitted without any alteration to the shoes, and they are made for many standard models.

FERODO

BRAKE BLOCKS for MOTOR CYCLES

Blocks for a number of standard models are in stock. Present owners should write to us for a list. If you contemplate purchasing a new mount specify Ferodo Brake Blocks.

The Best Road Guide for Motor Cyclists

THE MOTOR CYCLE ROUTE BOOK

With Road Maps of England & Wales, Scotland, and the London District

A WELCOME departure from the stereotyped form of road book is made in "THE MOTOR CYCLE" ROUTE BOOK. In addition to the usual routes from London, radiating main routes are given from other large and populous centres in England and Wales, and Scotland, as well as "linking-up" routes from all other cities and towns of fair size. The intersecting or linking-up routes are clearly shown by reference numbers. The items of interest on the main roads are described by the well-known authority on roads, Mr. Chas. G. Harper. A useful set of Maps of England, Wales, and Scotland, in Atlas form, and printed in red and black, is included.

List of Contents

Radiating Routes from large and Populous Towns, Traffic-avoiding Routes, and Routes into and out of London.
Linking-up Routes from and to smaller Towns.
List of Ferries in England, Wales, and Scotland, with their charges.
List of Speed Limits in Various Counties.
Lighting up Time Table.
Also 32-page MAP SECTION.

Price 2/6 net. **By Post, 2/10.**

Obtainable from ILIFFE & SONS LTD., DORSET HOUSE, TUDOR STREET, LONDON, E.C.4

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns -First 12 words 3/-, and 3d. for every additional word. Paragraphs of under 8 words re charged double rate. Each paragraph is harged separately. Name and address must e counted. Series discounts, conditions, and pecial terms to regular trade advertisers will e quoted on application.

Postal Orders and Cheques sent in payment for dvertisements should be made payable ILIFFE & SONS Ltd., and crossed & Co. reasury Notes, being untraceable if lost in ansit, should not be sent as remittances.

All advertisements in this section should be ccompanied with remittance, and be addressed the offices of "The Motor Cycle," Dorset louse, Tudor Street, London, E.C.4. To nsure insertion, letters should be posted in me to reach the offices of "The Motor Cycle." y the first post on Friday morning previous to he day of issue. Advertisements that arrive oo late for a particular issue or that are rowded out will automatically be inserted in he following issue unless accompanied by nstructions to the contrary.

All letters relating to advertisements should uote the number which is printed at the end of ach advertisement, and the date of the issue which it appeared.

The proprietors are not responsible for clerical r printers' errors, although every care is taken avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be ddressed to numbers at "The Motor Cycle" Office. hen this is desired, the sum of 6d. to defray the cost of gistration and to cover postage on replies must be added the advertisement charge, which must include the ords Box 000, c/o "The Motor Cycle." Only the number ill appear in the advertisement. All replies should be ddressed No. 000, c/o "The Motor Cycle," Dorset House, udor Street, London, E.C.4. *Readers who reply to Box No. dvertisements are warned against sending remittance through e post except in registered envelopes; in all such cases the se of the Deposit System is recommended, and the envelope ould be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box umber, as it is unusual for these to be sold without first ing inspected by the intending purchaser, advertisers will acilitate business by embodying in their advertisements me mention of the district in which the machine fered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons ay deal in perfect safety by availing themselves of our eposit System. If the money be deposited with "The otor Cycle," both parties are advised of this receipt. The time allowed for a decision after receipt of the oods is three days, and if a sale is effected we remit the mount to the seller, but, if not, we return the amount the depositor. Carriage is to be paid by the buyer, but the event of no sale each party pays carriage one way he seller takes the risk of damage in transit. For all ansactions up to £10, a deposit fee of 1/- is charged; on ansactions over £10 and under £50, the fee is 2/6; over 50 and under £75, 5/-; over £75 and under £100, 7/6 nd on all transactions over £100, ½%. All deposit atters are dealt with at Dorset House, Tudor Street, ondon, E.C.4, and cheques and money orders should be ade payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an dication that the advertiser is willing to avail himself of e Deposit System. Other advertisers may be equally sirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no swer to their enquiries are requested to regard the ence as an indication that the goods advertised have eady been disposed of. Advertisers often receive so any enquiries that it is quite impossible to reply to ch one by post.

MANUFACTURERS' STOCK

MAKINKOT BRAND

TO BE CLEARED.

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

T.T. Machines for the Public.

ALTHOUGH the T.T. races remain but a memory for another year, the present is not an inopportune time to comment on the subject of offering to the public models which scored successes in the Isle of Man.

Many manufacturers are now considering their 1923 programmes; we think we echo the sentiments of an important class of motor cyclists when we urge those makers who have scored in this year's big racing events to include in their catalogues machines as nearly as possible identical with the honours-winning mounts which bore their transfers. Some do already, but one or two most certainly do not.

In accepting entries for the Tourist Trophy races, it is a stipulation of the A.C.U. that identical machines be made available to the public. Somehow or other this rule is not observed as it should be; and, since no mention of price is made, compliance may be avoided simply by quoting an absolutely prohibitive figure to the enquirer.

The average enthusiastic motor cyclist quite reasonably wonders why a firm should show any desire to refuse orders for a commodity very much desired by some of its clients. Correspondents continually suggest to us that the sole reason is that the commodity in question—the super T.T. model—would only injure the reputation of its manufacturers if allowed to reach the hands of the ordinary private owner, that it is simply a freak which holds together just sufficiently long enough to complete the course in a race at a very high speed, when it is returned to the factory to be rebuilt. It is not a pretty theory.

So long, however, as manufacturers continue to withhold from the public a model even resembling in type their record-breaking wonder machine, so long will the man in the street continue to harbour his suspicions.

Just how much truth there is in the assumption is another matter, for it must be admitted by the most jaundiced critic that a machine which makes an outstanding performance in such a strenuous race as the T.T. should require very little de-tuning and modification to convert it into a delightfully controllable and thoroughly roadworthy sports mount. If this were not so, the whole purpose of the T.T. race would be lost.

Therefore, to retain the confidence of the motor cycle public, it behoves those firms to whom our remarks apply, to market replicas or at least to offer models of the same type as those which have brought them so much fame in the competition world. It is not much to ask.

International Six Days Trials.

FOR the second time a British team has attempted to wrest the trophy presented by the British Motor Cycle Manufacturers Union from the Swiss, who have held it since 1920. It is greatly to be regretted that it has been unsuccessful, as it was beaten by one mark. It was a splendid team of first-class riders, and had it not been for one small technical failure they would have been successful. A broken saddle spring, for which marks were deducted during the final examination, caused the penalty which lost the trophy. It is hard luck indeed, but Britain's representatives rode well, their machines proved their reliability and hill-climbing capacity, and they proved themselves equal to, if not better than, their Swiss rivals, especially when it was considered that the total cubical capacity of their engines was less than that of the Swiss machines.

An index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

by IXION

Side Roads.

THE various motoring organisations are obviously busy trying to find services worth rendering to their membership. Have they never noticed one of our most obvious needs, or is there some secret lion in the path? I refer to the shrieking necessity for safeguarding main road traffic from the idiots who turn into it at speed out of by-lanes. Within 25 miles yesterday I saved umpteen lives by driving very cautiously along one of our mainest main roads. At the first by-lane under notice, which entered at a right angle, a farmer's cart charged into the main road at speed along an arc which effectively blocked the full width of the road; and at the same instant some unspeakable ass of a motor cyclist dived out of the by-lane, overhauling the cart on the corner, and turning in his saddle to curse the farmer for sweeping so wide. At the next four blind corners Ford vans maintained by small local tradesmen were the offenders. At the sixth by-lane junction a big Daimler simply picked up a cheap small car and chucked it over the hedge. In no case could the culprits be under any misapprehension as to the respective standing of the two roads concerned. The big highway was one of our greatest trunk routes, and the side turnings were rough parish roads proceeding to tiny hamlets.

The Fosse Road.

IN this connection it is worth noting that many speedmen consider that the Fosse Road from Leicester to Newark affords a chance for one of the finest "blinds" in England. To my thinking it is a road which demands extreme caution. It is crossed at right angles rather blindly by a number of lesser roads and at least one important highway. Traffic on all these roads is rather sparse, and their users imagine that this sparsity confers a licence to take blind crossroads all out. I have experienced and seen so many narrow squeaks on this route that I personally drive slower over it than in most places. It is surely time that the law about main and side roads should be cleared up and strictly enforced. If this is impossible, it would be a palliative if a motoring body would erect skull-and-crossbone signs at the points where these side-lanes debouch into the big roads, and beneath them a board "MAIN ROAD—Beware of Fast Traffic!" The present perils arise from the fact that the fast through traveller doesn't know where the side roads occur, and trusts to a shadowy right of way, whilst the locals, having no more imagination than a mangold wurzel, see no harm in abutting into a stream of high-speed traffic at random until they are dead.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

A Holiday Warning.

MAY I appeal to those of our readers who are spending their summer holidays off the beaten track to drive with supreme care? There are several reasons why even an expert should not apply Portsmouth Road driving habits to the lanes of sea coast and mountain resorts. The first is that the holiday maker is on strange roads and cannot identify each and every danger spot at first sight. The second is that the local standard of driving (especially as applied to Ford cars) is not that of a London taxi man. The third is that the natives are accustomed to having their roads to themselves for at least half the year, and that doubling or trebling or quadrupling the traffic makes for difficulties, especially when the surplus motorists are drivers of the rather dashing type.

The Alleged Motor-Coach Peril.

I AM not one of those who consider that motor coach routes should be avoided for prudential reasons. It is true that none of us likes encountering a motor coach. That a couple of motor

Occasional Comments.—

coaches can pretty well block the widest road. That where motor coaches congregate, potholes usually abound. But conditions are generally improving each year. A vast deal of road widening has been done —*e.g.*, along the Dartmoor roads, which are once more safe and comfortable, despite the coaches. The potential perils of these cumbersome monsters are fully understood, and their drivers are nowadays picked men, as cautious and courteous as they are clever. Many motor cyclists have taken a vow to give motor coaching areas a miss as far as possible. If my experience goes for anything, they would find that this traffic has been very largely reformed within the past year.

A Curious Experience.

A READER asserts that after about 1,000 miles on an o.h.v. engine he finds a very peculiar deposit about ¼in. thick on his inlet valves. He describes it as a "spongy, rubber-like growth," and wonders whether it is connected with the masking of these valves on the particular engine which he uses. He further remarks how pleased he is with the cleanliness of his crank case, partially due to the absence of burnt oil oozing out of the exhaust valve guides.

The Solitary Fair.

IT is very gratifying to meet so many ladies riding alone. Not so long ago, if one sighted a lady riding solo, her attendant swain came along a few hundred yards behind. This week I have met at least a score of girls—well, some of them will never be girls again—absolutely by themselves. Several implications follow. A woman can feel safe unattended on British roads. Ladies' machines have acquired a good reputation for reliability. Should a puzzling trouble occur, a girl can rely on the comradeship of the road to see her through it.

Puncture Proof.

SEVERAL lady readers have recently asked me to recommend an absolutely puncture-proof tyre. They say they don't mind changing a plug, but repeated wrestles with tyres nauseate them. The request is often pointed by a demand for definite opinions about various anti-puncture specifics. I answer all these letters in the same way. The best safeguard against punctures is to be heavily overtyred, which means expenditure and weight. The various dopes marketed for insertion in standard tubes have never convinced me that they are more than palliatives, capable, often, of sealing a small hole, good to delay the leakage from a sizeable hole; but generally useless in the case of a big tear. I like the puncture-sealing tubes better than the dopes, but patent tubes are necessarily expensive. If Mrs. Ixion demanded a solo 'bus (I have trained her better), I should send her out on 3in. tyres, with nail-catchers and p.p. tubes, or some dope inside a standard tube.

Extremes Meet.

THE same post brings a letter from Irak. One of our keenest riders has forsworn the hobby. Not from poverty. Not from age. Not because of D.T. No, not even because of sandstorms or Mesopotamian roads or predatory Arabs. But merely because there is no shade. He remarks pathetically that in a country where the act of turning on the petrol induces a profound perspiration, and where there is no shade except at "heat-stroke stations" (otherwise mud huts by the roadside), the idea of mending a puncture in the open sun is fraught with suicide. So he has abandoned the sport until some kindly fate shall transfer him to Labrador. So, what with lazy ladies at home, and tired Tims in the tropics, and the indolent individuals of this country, the gentleman who can produce a non-puncturing tyre is assured big markets.

Goggle Deafness—

I HOPE some medical reader will tackle in earnestness the query propounded by "Sutton Bank" in our issue of July 20th. I have heard many riders assert that goggles made them so deaf that they preferred to expose their eyes to wind and dust. Analysing my own sensations without medical knowledge, I had rather come to the conclusion that sight and hearing work together; goggles usually limit one's field of vision; so, failing to *see* something, one imagines one has failed to hear it.

—And Helmet Whistle.

CLOSELY allied to goggle deafness is another motor cycling malady, which may be termed "helmet whistle." When one dons certain types of helmet, a formerly silent breeze suddenly becomes articulate, and creates a most annoying whistling in one's ears. A helmet manufacturer told me it could be stopped by making the helmet such a good fit that no wind penetrated between the sides of the helmet and one's cheeks. This is not as easy as it sounds, but when I at last managed it the whistling was still bad. A rider next informed me it could be stopped by having sufficiently large sausages in front of the ears. I increased the size of mine till the helmet was almost all sausage. But it still whistles.

Against the Bye-Pass Route?

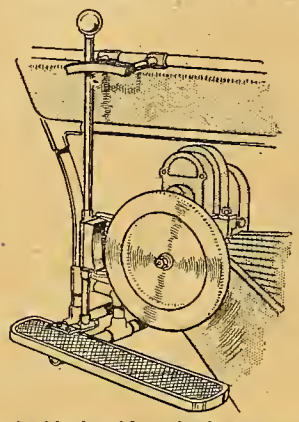
I HAVE been told that local tradesmen are always against the signposting of any switch or bye-pass route, on the ground that it deflects possible customers, and that garage owners are the chief obstructions, as they have installed themselves along the old routes, and would be outflanked if traffic were sent along new roads. Hence it is said that only at really perilous bottlenecks like the historic city of Durham can local opposition be fought down and the happy tourist be nursed along a safe, straightforward "way round." This objection is doubtless substantial in some cases. But it is very easy to exaggerate it. After all, the touring motorist is not a big shopper. He stops for meals. He stops for motor supplies. He stops for emergencies, such as drugs or a clean collar. But in the ordinary way he buys very little else along the road. Moreover, nine motor cyclists out of ten plot their tours to dodge as many of the big towns as possible, largely because of the difficulty of finding the way. Many a rider deliberately avoids Bristol or Birmingham solely for this reason, and would cease to do so (at any rate in dry weather) if pathfinding were simplified.

IDEAS: USEFUL AND INGENIOUS.

A Selection of our Readers' Home-made "Gadgets," with Practical Hints on Work in the Garage and on the Road.

Bowden Wires.

NEVER cut a Bowden wire without first soldering the strands together, otherwise they are sure to unravel.



A flywheel brake with ratchet lever suggested by Mr. J. Taylor of Glasgow.

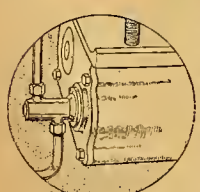
Lost Filler Cap.

IT is not absolutely essential that a replacement should be made, but the petrol will slop over very badly if the opening is not covered; on those tanks having an oil reservoir, transfer the cap therefrom to the petrol tank and fold a duster or a piece of an old tube over the oil opening, keeping it in place by a strap round the tank.

Driving a Mechanical Pump.

BEING blessed with a simple machine having no obtruding rotating parts, Mr. C. B. Browne found his desire to fit a mechanical oil pump thwarted until a special inspiration came his way.

The machine in question was a Villiers-engined mount, with flywheel magneto on one end of the crankshaft and clutch on the other, so that a drive from the engine itself was not reasonably possible. Only some transmission element remained to provide the necessary rotating element, and as the gear box was a Burman of the plain two-speed type, it was decided that the Showell pump, on account of its neat dimensions should be carried on the offside main shaft bearing housing. The shaft itself was slotted diametrically, so that the squared end of the pump spindle could engage to obtain the drive.



Showell pump driven off the mainshaft of a Burman gear box.

Hunting.

IF the two cylinders of a twin engine are not perfectly synchronised there is a loss of power. It is a simple matter to run each cylinder separately by removing the sparking plug cable in turn or by shorting each plug with a wooden-handled screwdriver.

Drastic Remedy.

A DESPAIRING rider who, miles from anywhere, required a cotter-pin for a valve took the risk of cutting a spoke out of the front wheel to obtain the necessary hard material. It worked excellently.

Valve Springs.

WHEN power falls off, it is important to see that the springs are of the right strength. If they are too weak, power will be lost through "valve bounce" and "tappet lag." If the replacements are too strong, great stress is put upon the valves, tappets, and cam gear.

Folding Stand for Sidecars.

TWO pieces of oak or ash about 12in. or 14in. long by 1¼in. wide and ⅝in. thick, a 5-16in. bolt and wing nut, a couple of screws and a hacksaw blade, are the materials in Mr. H. Towers' sidecar stand. The pieces of wood are drilled 5-16in. about 2in. from the end and secured by bolt and nut.

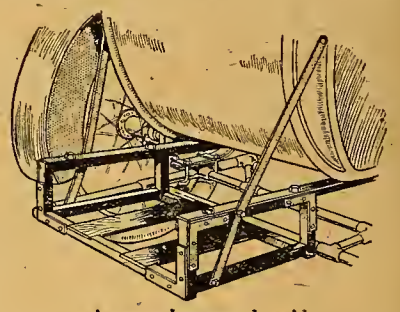
One hole in the hacksaw blade is brought out to the edge to form a hook-end by filing, and then the other end is fixed to one leg about 4in. from the bottom, and the hook dropped over a corresponding screw on the other leg.

A useful idea for owners of sidecars.

Mr. Towers, being a timber merchant, can afford to be reckless in the metal line, having saved on the wood; we ordinary mortals would use a bit of strap iron in place of that hacksaw blade.

Sidecar Luggage Grid.

A SUBSTANTIAL luggage grid, sprung with the sidecar body and capable of bearing a man's weight, was simply constructed by Mr. G. S. McCann, of Uttoxeter. Square oak bars were used, the two rectangular side frames being made first and then joined by the transverse bottom pieces, which in turn were bridged by the "floor" boards. All joints were halved and screwed, and the main corners strengthened by iron corner-plates bought from the ironmongers. The grid was suspended by bolts from two pieces of 1×⅛in. angle steel screwed to the bottom of the body, further support being given by two strips of steel, ¾×$\frac{1}{16}$in., screwed to the back of the body and the sides of the grid.



A strong home-made grid.

A Dope for Joints.

THERE are very few jointing media which are impervious to heat, oil, petrol, and benzole. It is worth knowing that seccotine is proof against all of them, whereas many of the dopes used by motor cyclists are sensitive to one or other of the above influences.

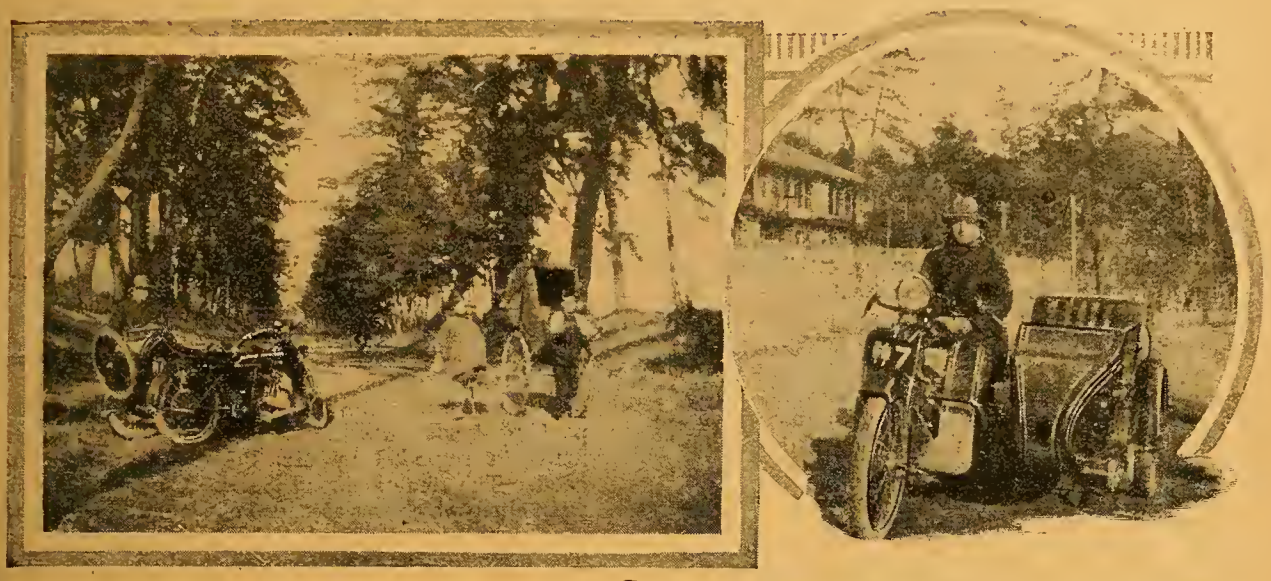
To Users of Rubber Grips.

IN common with many other riders, Mr. J. F. Bridge, of Liverpool, found that after fitting rubber grips he always had dirty hands after riding. This state of affairs he assumed to be due to the absorption of dirt by the grips after the hands had become soiled by adjustments on various occasions. The grips being of a peculiar composition, did not prove to be amenable to any ordinary cleaning process, but the trouble was finally eliminated by covering them with suitable lengths of cycle inner tube, thus giving them an easily cleaned surface of excellent rubber.

"HINTS AND TIPS FOR MOTOR CYCLISTS"—gives hundreds of useful "wrinkles." Price 2s. 3d. post free from "The Motor Cycle" Offices, Dorset House, Tudor Street, London, E.C. 4.

MOTOR CYCLES IN THE EAST.

Notes from Readers in Japan, Burma, Java, and the Malay Straits.



A 976 c.c. Excelsior on Japanese highways. Take away the characteristic rickshaw and the scenes might well be in Britain.

THE motor cycle is now the mount of every man, and is in use in every clime. True, we have not yet heard of any Eskimo running a machine on the shores adjacent to the North Pole, but from almost every other part of the world we have letters from readers who, irrespective of road or climatic conditions, use their machines for business and pleasure.

For long it has been recognised that the so-called colonial conditions are not general in the overseas markets, and that one may find roads just as good as those in this country in almost every country where the white man has taken charge. On the other hand, there is rough and bad going in these islands equal to the worst roads in Africa or the Antipodes. Hence the modern trials are developing motor cycles along lines which will render them suitable for every man's needs wherever he may reside.

A Long Ride.

Twenty years ago a well-known explorer cycled round the world viâ Siberia. While there are difficulties in a similar journey being undertaken at the present time, it may not be long before the feat will be attempted on a motor cycle.

Two intrepid motor cyclists have started to ride to the home country from Singapore. They are F. A. F. Johnstone and E. D. Hill, of Johore, and their route includes Siam, Burma, India, Mesopotamia, Asia Minor, Turkey, the Central European States, Italy, and France. They recently left Penang for Alor Star on the second stage of their journey. The couple do not anticipate any serious difficulty, except in Burma, where they may be confronted with the absence of roads. They are well provided with spares and maps, and are quite confident that they will accomplish the journey, which they estimate will occupy eight or nine months. Johnstone is riding a Triumph while Hill is mounted on a Douglas.

Zeniths and Nortons also appear to be well to the fore in Singapore. Quite recently a rider of a 654 c.c. Zenith (H. La Mothe) and a Norton exponent (W. P. Currie) rode from Singapore viâ Batu Pahat, Muar, Malacca, and Tampin to Serembau (220 miles) in 9h. 35m. actual running time. Neither men had to put a spanner to the engine of his machine, but both experienced tyre troubles.

The run was over typical colonial roads of loose metal covered with sand and unrolled. On several parts of the route the machines had to be ferried across rivers in native boats.

Good Opening in Burma.

A correspondent who signs himself "Anglo-Indian," writes that Burma is a very good market for motor cycles, in spite of the fact that there are very few roads, but most of the riding is done in the cantonment. For this reason small two-strokes have become very popular, and one may see hundreds of such machines as the New Hudson, Triumph, and M.T. The B.S.A., Triumph, Ariel, and other big singles are also very much to the fore as double purpose mounts. We are informed that Harley-Davidsons have a good sale in spite of the fact that they cost nearly as much as Ford cars.

Flat twin "sports models" are popular, there being many Harley Sports and Douglas two-speed models in use.

From Japan.

An Englishman resident in Japan is loud in his praises of the 976 c.c. Excelsior sidecar outfit, one of which he has recently had sent out to him.

"I think," he writes, "it is one of the best looking machines in this locality, particularly when placed alongside

Motor Cycles in the East.—

a typical Yankee outfit. The J.A.P. engine gives plenty of power for anything wanted here, there being very few stretches of decent road for even half a mile in length. The sidecar is A1. Thank heaven! I have the Brooks cantilever saddle on Japanese roads. On a recent run I climbed 1,400ft. in 4 miles, all on second gear. The road was a continuous corkscrew, and the scenery was very beautiful. Part of the ancient Tokkaido road from Tokyo to Kyoto is exceptionally good."

Motor Cycle Racing in Java.

Recent mails from Batavia (Java) brought news of a motor cycle race meeting which was held on the racecourse at Welterneden, a suburb of Batavia. The grass track had been rolled with a steam-roller and re-turfed in places, and some excellent racing was witnessed, though the first morning's programme had to be postponed on account of the wet going.

Strict police regulations were in force, and during practice no rider was allowed to exceed 80 km.p.h. (50 m.p.h.). Competitors had to wear racing helmets and to sign a declaration that they had previously ridden on the track and that none but themselves were responsible for their accidents. A European doctor was provided by the race committee.

The circuit was 1,600 metres (80 feet short of mile), and the results of the various classes were:

Class A. Max. capacity 400 c.c.—4 laps.

1. J. K. Fellner (A.B.C.) ... ... 48.6 m.p.h.
2. J. C. Meeuwenoord (A.B.C.) ... 45.2 ,,

Class B. Max. capacity 500 c.c.—5 laps.

1. de Raadt (Douglas) ... ... 60.66 m.p.h.
2. Fellner (A.B.C.) ... ... 56.9 ,,
3. de Stuuler (Douglas) ... ... 51.9 ,,

Class C. Max. capacity 750 c.c.—6 laps.

1. de Raadt (Douglas) ... ... 58.2 m.p.h.
2. Fellner (A.B.C.) ... ... 56.5 ,,
3. de Stuuler (Indian Scout) ... ... 54.0 ,,

Class D. Max. capacity 1,000 c.c.—8 laps.

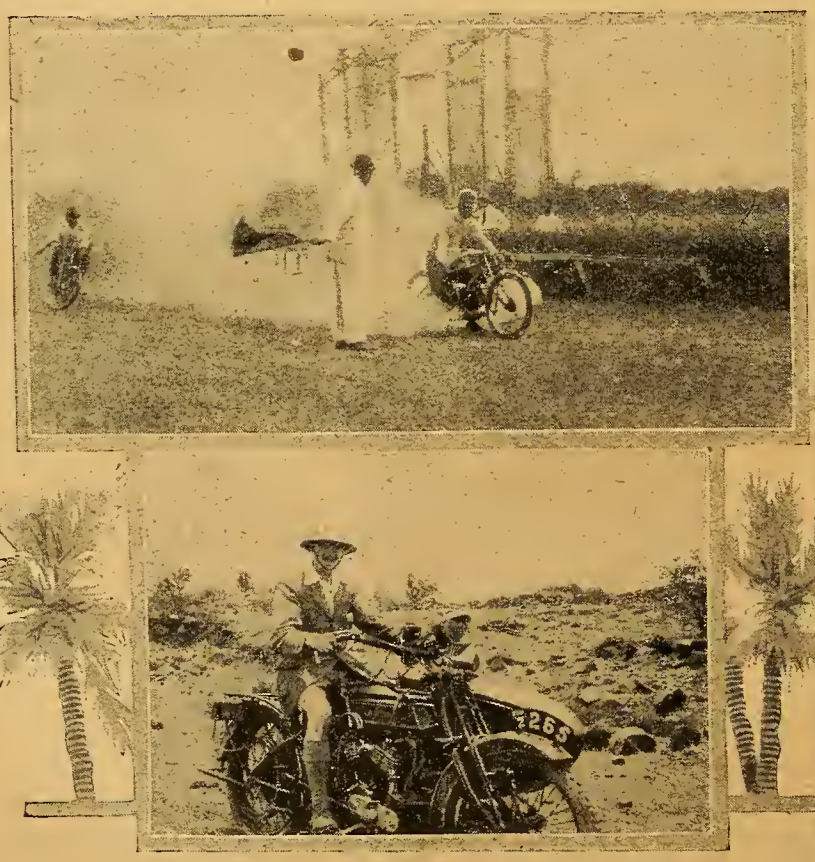
1. de Raadt (Indian) ... ... 61.9 m.p.h.
2. Rous (Harley-Davidson) ... ... 61 5 ,,

Class E. Max. capacity 1,250 c.c.

1. Van der Kop (Harley-Davidson) 49.7 m.p.h.

From Bombay.

Mr. Fraser L. Peradon of Bombay has found that in spite of the heat, 105° in the shade, and long treks in second gear, the engine of his New Imperial big twin sidecar shows no sign of overheating. He recently drove from Bombay to Lonaola on the Poona road. The journey was 76 miles and occupied 3¾ hours, which, considering the state of the roads, is regarded by Mr. Peradon as particularly good. The route included the Bor Ghat—a long and steep climb which was ascended on second gear, passing several big six-cylinder American cars in bottom gear. The petrol consumption for the round trip, 152 miles, was two gallons. Mr. Peradon concludes his communication by remarking emphatically that, in his opinion, the motor cyclists of the home country do not know what a bad road really is.



IN JAVA AND INDIA.

(Top.) An A.B.C. ridden by J. K. Fellner which secured first place in its class at a race meeting in Batavia (Java).

(Bottom.) F. L. Peradon, of Bombay, and his 976 c.c. New Imperial sidecar which he has found particularly suitable for use in India.

(Right.) An Indian scene near Bombay.

REJUVENATING AN AMERICAN BIG TWIN.

Describing a Thorough and Painstaking Overhaul carried out by an Enthusiastic Amateur Mechanic.

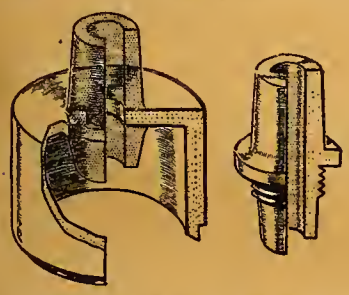
THE machine concerned in the following account is a 1920 model American X with magneto ignition, which had been in regular use for close upon two years.

Approximately 10,000 miles had been traversed without mechanical breakdown, but one or two new valves had been fitted and sundry exhaust valve springs, also periodical grinding-in of valves and decarbonisation attended to.

At length, however, power had been lacking and the carburetter had proved troublesome. In addition, oil in the combustion chambers was much more in evidence than conduced to clean plugs and regular firing, and the need for a thorough overhaul was very apparent; it might be added that all the work necessary was carried out in the course of six weeks.

Commencing to Dismantle.

Carburetter and inlet pipes were first detached, as also the inlet domes and rocker gear, then by gently levering through the plug hole and judiciously tapping the inlet cage guide and valve

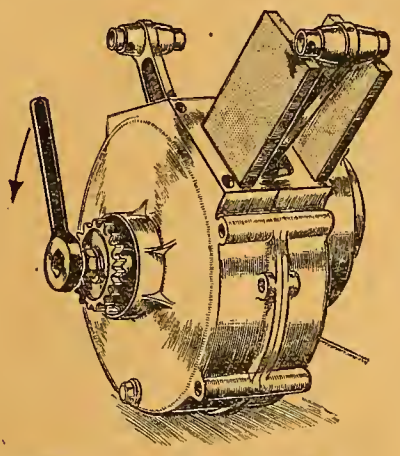


The shaded portion shows the old worn guide which was turned off the inlet cage. It was replaced by a new one (right) made of phosphor-bronze.

stem the cage was removed complete with its valve and spring. Care was observed not to damage the thin copper washer making the joint between inlet cage and cylinder.

All traces of carbon were removed from the inlet pocket and seating for the washer. Before removing the cylinders the plug in the top of the rear cylinder was removed, the contact breaker placed in the "full advance" position, and the engine rotated until the contact points were just commencing to separate for the back cylinder. A record of the piston position for full advance ignition was thus obtained by marking a wire inserted through this cylinder top.

Removing the cylinders and releasing the valve springs, very considerable wear in the exhaust valve guides was observed. As might be anticipated, the old guides proved difficult to unscrew until a good fitting box-key and a sturdy tommy pin were obtained and repeated dosings of paraffin, turpentine, and blow lamp heating were applied.



Method of using wooden packing blocks to lock crankshaft while unscrewing sprocket nut.

The new replacement guides were slightly eased on the screwed portion before being firmly screwed into place.

Decarbonising and Valve Grinding.

The condition of the exhaust valves being very fair the faces were ground in the lathe, using a fine emery wheel, afterwards grinding in each valve (with Richford fine compound) very slightly into its respective cylinder.

Chipping all carbon from the cylinder heads and about the valve ports and pockets, scraping away the old cylinder base packing, removing any burrs with a smooth file and washing the units thoroughly in paraffin completed the cylinder overhaul. New cylinder base washers were cut from 1-64 in. thick Hallite jointing.

Measurement of the cylinder bores by micrometer revealed almost imperceptible wear, and refacing of the valve seats was not necessary.

The inlet valve guides are integral with the cast-iron valve cages. Whereas the valve seats were excellent, the guides were hopelessly worn—this latter no doubt accounting for some of the erratic running previously referred to. As it was considered that the cost of new cages was hardly justified the following repair was carried out. The guides were cut off flush, the bore increased and tapped out $\frac{5}{8}$in. diameter by 24 threads per inch to accommodate phosphor-bronze guides, which were turned up.

Pistons Sent to Ring Specialists.

Turning next to the pistons, a fair amount of wear was evident, especially in an up and down direction.

The old rings were scrapped, and after cleaning a large amount of carbon deposit from the interiors the pistons were posted to a firm of piston ring specialists with instructions to true up the grooves and fix each piston with a set of rings.

At this stage as much oil as would drain out was got rid of by way of the crank case drain plug, afterwards pouring in about a pint of paraffin and well flushing. Wear on crank and gudgeon pin could then be felt appreciably.

Dismantling the Crank Case.

Of the connecting rod small ends the gudgeon pins were most worn. New standard replacements were obtained and tried and no appreciable wear was detectable in the bushes, which are plain phosphor bronze.

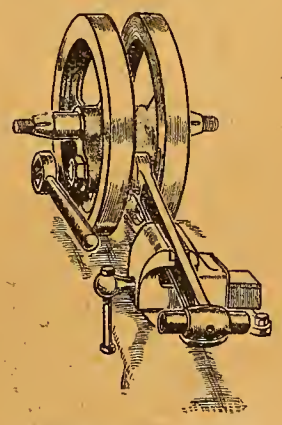
Trying each connecting rod for vertical play, sufficient was noticeable to indicate the desirability of a closer inspection, and this, of course, involved taking apart the crank case and flywheels. Removing the timing case cover and leaving the oil pump *in situ* for the moment, all the timing gear was exposed. It was noticed that the small main shaft pinion is marked (two dots) for meshing with the large cam wheel.

After washing all the parts in paraffin no appreciable wear was noticeable, but one of the rocker studs was loose in the timing-case wall.

The pinion and the sprocket being keyed on taper shafts, they were removed by prising with a screwdriver and at the same time tapping the shaft ends sharply but not heavily with a brass hammer.

Before detaching the crank case from the frame (the gear box had to be removed first), a wood block was placed in position to take the weight when the frame bolts were loosened.

Removal of the crank case fastening screws was next proceeded with. A powerful screwdriver, and, moreover, one which "fits" the slots of these recessed cheese-head screws was here very desirable, as the latter are of necessity tight with a view to keeping a good joint and correct alignment.



Holding the flywheels while the crank-pin nut is removed.

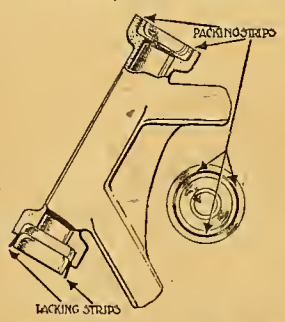
Rejuvenating an American Big Twin.—

Dealing with the flywheels, it was remembered that the crank pin nut nearest the timing-gear has a left-hand thread. The small locking screws found against the faces of the crank pin nuts were first removed by gripping one of the connecting rods carefully in the vice and allowing the flywheels to rest on the bench. A well-fitting type of key is, however, desirable, on account of the tightness of the nuts and their short depth.

By smartly tapping the crank pin end it was removed from the flywheels, and the connecting rod assembly taken apart, careful note being made of the order of assembly. (Forked rod is in front cylinder.) Using a micrometer, it was found that the crank pin was worn oval to the extent of 5-1,000in., so replacement was decided upon. It was further thought desirable to replace the roller assemblies by new ones, and these were accordingly obtained.

Overhauling the Cycle Parts.

Attention was now directed to the cycle parts. The front wheel was removed and the head dismantled, the latter being found to be fitted with cup and cone bearings. The cups showed slight indentation, but otherwise were in



Head races loose in their seatings may be firmly located by packing strips of brass foil.

good condition. To rectify, each cup was lightly ground on the flat portion with a high-speed emery-wheel of fine grade. Later, in re-erecting, it was observed that the cups were a slack fit in their housings, and a remedy was effected, using thin brass-foil packing strips and tapping the cups to their seats with a mallet and wood drift. Discretion as to the tightness of fit is, of course, necessary. On account of rust, the front fork spring was taken apart, each leaf cleaned and greased. To do this it is first necessary to remove the mudguard from the fork.

Turning now to the front fork rockers and clevis, considerable wear was apparent in the bolts of the latter. There was also sufficient wear in the rocker holes to permit objectionable play. As it was noticed that the rockers were in pairs, they were first marked for their own side of the fork before removing. It was decided, as the clevis on each side showed no signs of wear, to fit standard new bolts only, but to drill out and bush the rockers after truing the rocker studs and hardening. It was necessary first to soften the rockers, then drill out 1-8in. diameter, larger in all but the spindle hole. Tool steel bushes, approximately 1-16in. thick were made to fit the trued-up studs and new clevis bolts. These bushes were first pressed into position in a soft state and the grease hole drilled to reach both bushes. Next the bushes were removed, hardened, lapped to suit the studs and clevis bolts, and then pressed into place again.

Inspection of the front hub showed everything in good condition, cleaning thoroughly and repacking with hard grease being all that was required.

Advantage of Large Diameter Hub Bearings.

A preliminary to dealing with the rear wheel was a thorough cleaning of all parts in paraffin to free from grease and two years' accumulations of road surface. Examination then showed no necessity for new brake linings, and the spindle bearings required no attention beyond packing with grease and resetting. No doubt the ½in. diameter balls found here account to some extent for the good wearing properties of the cups and cones.

Passing to the sprocket side of the hub the cush drive was dismantled, using a soft steel punch to operate the lock-ring, a special key not being available. Several of the "cush" springs were found to be broken, consequently were replaced by makers' spares. After the usual cleansing, the cush drive reassembly was made, using an ample supply of grease, and as it was found that the sprocket had developed slight wear on the teeth, it was reversed on the hub so as to take the pull on the opposite tooth flanks.

Re-assembling.

The flywheel and connecting rod assembly was made much in the same manner as described for dismantling, but in the reverse order, great care being taken to keep the flywheels square with each other.

The spigoted crank case joint having been scraped free from old jointing and any burrs removed, the new joint was made with "Metalastene" and the screws thoroughly tightened up.

Having tapped the gudgeon pins into position, it was first necessary to flatten the safety washers which are fitted, then to dish them into a saucer shape with the gap more or less closed. Then inserting the washers in the gudgeon pin bosses the former were expanded into their recesses, using a taper punch, and finally flattening by tapping with a drift of approximately the same diameter as the gudgeon pin.

The front cylinder is best fitted, complete with exhaust valve and cover, at this stage, as with the magneto on its platform it is extremely awkward to tighten up the timing side front cylinder stud. The magneto should now be fitted to its platform, adjusting it to gear correctly with the intermediate timing wheel and tightening the base screws.

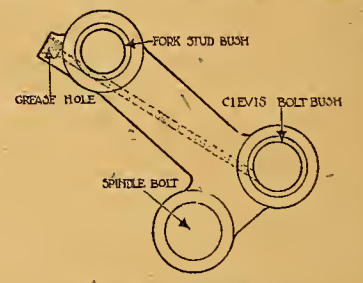
Should the refitting of the magneto to its platform be left until the engine is fitted in the frame it will be found more or less impracticable to tighten all four of the magneto base screws owing to the obstruction of the front frame lug.

Valve Tappet Clearances.

The inlet valves were refitted, leaving 2-1,000in. between rockers and valve stems. A clearance of 8-1,000in. was allowed between tappets and exhaust valves.

Thus far, it will have been observed, little mention has been made of the carburetter. This, a Schebler, had not for some time given satisfaction and, moreover, appeared somewhat heavy on petrol, and it was decided to fit a new instrument, a Binks being selected.

A special exhaust jacketed extension pipe was attached to the standard American X inlet pipe flange to carry the carburetter in the most accessible



Hardened steel bushings used to give the front fork rockers a new lease of life.

position and to avoid fouling the front cylinder with the float chamber, at the same time keeping clear of the gear lever and operating rod.

A stay under the float chamber fastened to the nearest cylinder holding-down stud was fitted to relieve the inlet pipe of undue weight due to overhang.

Whilst holding no brief for the carburetter makers, it is only fair to remark that the improvement in performance has fully justified the expense. Slow running and acceleration are especially good.

Here it is appropriate to insist how very necessary it is that all joints in the induction system, gaskets, etc., should be clean and smooth. The importance of this advice, so often reiterated in the columns of this paper, cannot be overestimated.

In conclusion, the procedure described in the foregoing, though concerned particularly with one make of machine, is in general applicable to sundry other machines of similar type.—H.B.

NEW ROUTE TO WALES.

A scheme has been adopted by the Cardiganshire County Council and the Rhayader Rural District Council for the opening up of an alternative route for motor traffic from Aberystwyth and Mid-Wales, to Hereford and the English border. By this route tourists from England will be able to take the present well-known road through Dyffryn Castell, and return by a reconstructed old coaching road passing through the heart of Wales, *via* Rhayader and Hereford.

GUIDE TO THE SIX DAYS TRIALS.

Thorough Testing Foreshadowed in Advance Maps of the Six Days Routes. Long, Tiring Hills are a Feature. 144 Entrants.

STARTING out from York on Monday morning, the "Six Days" competitors will embark on over 800 miles concentrated road work; the sixth day is to be devoted to speed tests on Brooklands.

Motor cyclists whose engagements will permit should make a point of being on the course at the various places where performances can be judged, for the best riders and machines will be engaged in the greatest test of the year. Together with the T.T., the Six Days Trials represent the most important contribution of the A.C.U. to the active development of the efficient motor cycle.

The competitors weigh in and submit their mounts for preliminary examination between 2 p.m. and 3 p.m. on Sunday next at the Bloffom Garage, York.

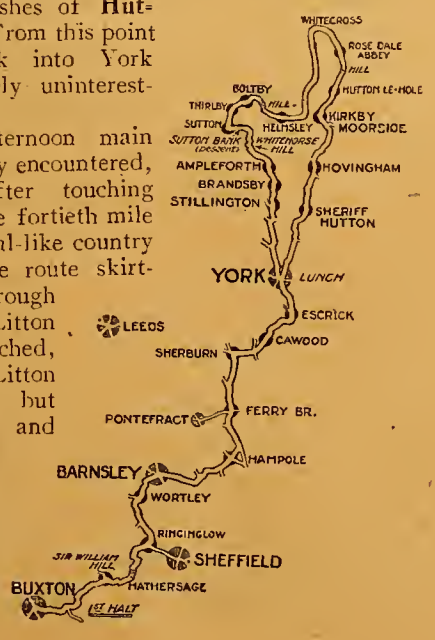
MONDAY: YORK TO BUXTON.

York (8 a.m.), Ampleforth, Boltby, Rosedale Abbey, Kirkby Moorside, Sheriff Hutton, York (lunch 1.8 p.m.), Sherburn, Ferry Bridge, Barnsley, Ringinglow, Hathersage, Buxton.

It is freely prophesied that Monday morning's run will be the stiffest one of the Trials. The route lies north of York, over fairly level roads for the first 20 miles. Shortly, however, comes the ascent of **White Horse Hill** and the immediate descent of Sutton Bank.

The route then lies through Thirlby and Boltby, when **Boltby Bank** is negotiated and a secondary road taken to Helmsley and east to one mile before Kirkby Moorside. From this point a detour is made right over the wild moorlands, the most northerly point being White Cross. A track is then followed down to **Rosedale Abbey**, out of which is the ascent of the same name, followed by a run across the moors to the water-splashes of **Hutton-le-Hole.** From this point the run back into York is comparatively uninteresting.

In the afternoon main roads are chiefly encountered, until just after touching Barnsley at the fortieth mile much more trial-like country is reached, the route skirting Sheffield through **Ringinglow.** Litton is shortly reached, the famous Litton Slack passed, but not ascended, and good main road taken into Buxton, where the first competitor is due to arrive at 6.51 p.m.



TUESDAY: BUXTON TO SHREWSBURY.

Buxton (8 a.m.), Congleton, Rudyard, Axe Edge, Rudyard Lake (lunch 11.19 p.m.), Oakamoor, Cheadle, Stone, Newport, Shrewsbury.

On Tuesday morning the main road is taken past the famous "**Cat and Fiddle,**" and then over excellent trials country east and south-east of Macclesfield. Some 30 miles of by-ways brings competitors to **Mow Cop,** after which hill the route takes a north-easterly direction towards **Axe Edge,** and then southwards to the beautiful Rudyard Reservoir.

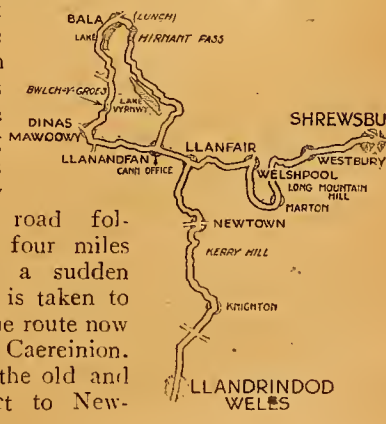
After lunch at the Lake Hotel, although the gradients are not severe, the nature of the course is such that any high speeds are impossible. A circuitous route touches Ipstones, Oakamoor, Cheadle, Hilderstone, Newport, and the outskirts of Wellington to the Wrekin. A magnificent test hill through the woody slopes of the **Wrekin** will be included, if possible, after which the remainder of the run into Shrewsbury is plain sailing.

WEDNESDAY: SHREWSBURY TO LLANDRINDOD.

Shrewsbury (8 a.m.), Westbury, Marton, Welshpool, Llanfair Caereinion, Cann Office, Dinas Mawddwy, Bala (lunch 1.30 p.m.), Cann Office, Newtown, Knighton, Llandrindod Wells.

Through Shrewsbury the main road is taken to near Welshpool, where a left-hand turn brings competitors to the village of Leighton and over the **Long Mountain** to Marton. The lower road is then taken back into Welshpool, soon after which the main road is followed through Llanfair Caereinion, Cann Office, Dinas Mawddwy, and up the now famous pass of **Bwlch-y-groes,** and down into Bala, the lunch stop.

The difficult road over the little-known **Hirnant Pass** is next taken, Lake Vyrnwy being skirted on its north-easterly side, and the road followed for some four miles beyond it, until a sudden turn to the right is taken to Cann Office. The route now runs to Llanfair Caereinion, and from there the old and hilly road direct to New-



Guide to the Six Days Trials.—

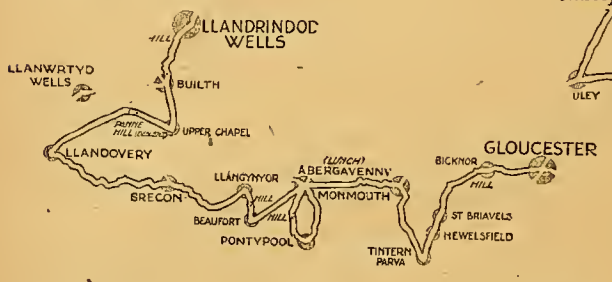
town is followed. After climbing the **Kerry Hills** the boundary road between Wales and England is traversed until Knighton is reached, whilst from Knighton there is an excellent fast run into Llandrindod Wells.

THURSDAY: LLANDRINDOD TO GLOUCESTER.

Llandrindod Wells (8 a.m.), Builth, Llandovery, Brecon, Llangynydr, Beaufort, Abergavenny (lunch 12.24 p.m.), Pontypool, Abergavenny, Monmouth, Tintern Parva, St. Briavels, Bicknor, Gloucester.

The main road is followed to Builth, after which the old coach road is taken towards Brecon, but is soon left after the summit is reached by a bye-road passing down Panne Hill and continuing over the mountain road south of the Sugar Loaf Pass into Llandovery. From Llandovery to Brecon the main road is followed and continued for another 10 miles towards Abergavenny until the climb over the mountains from **Llangynydr** is commenced, the road at the summit reaching an altitude of no less than 1,694ft.

The valley of the Usk is re-joined by way of Beaufort and Brynmawr, and lunch is taken at Abergavenny.



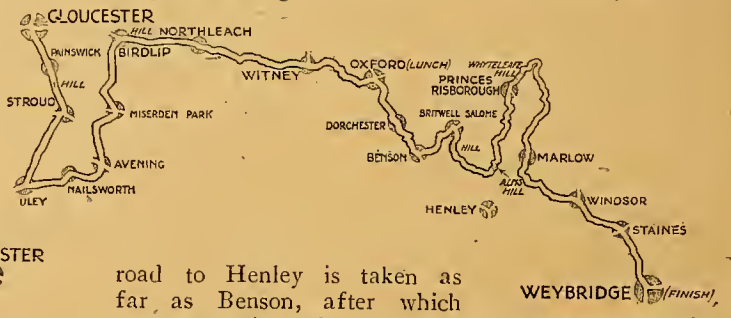
After the stop another long mountain pull is met with, this time being the direct route from **Abergavenny** to the colliery districts of Blaenavon and Pontypool. After passing Pontypool the route returns to Abergavenny, and from that town bears east to Monmouth.

Shortly after leaving Monmouth there is a peculiarly beautiful descent to the valley of the Wye, and this historic river is followed until Tintern Parva is reached, where the river is crossed and an ascent made to the opposite uplands and the interesting villages of Hewelsfield and **St. Briavels.** The route continues to traverse the romantic Forest of Dean, the next point of importance being the descent through the Forest and corresponding climb near **Bicknor.** From this point an undulating road is taken to Gloucester.

FRIDAY: GLOUCESTER TO BROOKLANDS.

Gloucester (8 a.m.), Stroud, Uley, Nailsworth, Miserden, Birdlip, Northleach, Oxford (lunch 12.46 p.m.), Dorchester, Benson, Britwell Salome, Princes Risborough, Marlow, Windsor, Staines.

Following the direct road to Painswick, the route traverses quite a number of interesting test hills in the **Cotswolds.** After reaching **Uley** a north-easterly direction is taken through Avening and then northwards through the wonderfully picturesque Miserden Park to the top of Birdlip. After leaving Birdlip another beauty spot is passed at Cowley Manor, and several more test hills encountered until the main Oxford road is reached at Northleach, from where it is plain sailing into Oxford. After lunch the main road to Henley is taken as far as Benson, after which an attempt is made to show that the **Chilterns** have as much of interest for the motorist as either the Cotswolds or the Forest of Dean. **Britwell Salome** is the first of a series of hills in this neighbourhood, the steepest of which is **Alms Hill,** out of the hamlet of Stonor, to which hill there will be an alternative route for those who are not prepared to face its gradient of 1 in 2.75.



THE COMPETITORS AND THEIR OFFICIAL NUMBERS.

CLASS A. (Not exceeding 250 c.c. solo).

No.		Gear Ratios. Min.	Max.
1.	P. L. Mayo (249 Coventry Eagle)	6.95	20
2.	R. P. Purnell (169 J.E.S.)	6.5	18
3.	B. Kershaw (249 New Imperial)	6	17
4.	L. Horton (249 New Imperial)	6	17
5.	J. Wilkins (249 New Imperial)	6	17
6.	G. S. Davison (247 Levis)	4.75	16
7.	A. R. Edwards (247 Levis)	4.75	16
8.	F. W. Applebee (247 Levis)	4.75	16
9.	G. Lovegrove (247 Radco)	5.25	18
10.	J. Johnson (247 Sun-Vitesse)	6	16
11.	F. Parkes (247 Sun-Vitesse)	6	16
12.	M. Bishop (247 Sun-Vitesse)	6	16
13.	*J. Graham Oates (248 Grindley)	6	16

CLASS B. (Not exceeding 350 c.c. solo).

14.	E. A. Barnett (346 Francis-Barnett)	5.9	17.2
15.	S. M. Greening (346 Francis-Barnett)	5.9	17.2
16.	Mrs. O. M. Knowles (349 A.J.S.)	6	16
17	*H. Gibsoo (348 Raleigh)	5.8	16.8
18.	W. H. Hadfield (348 Raleigh)	5.8	16.8

TEAMS IN THE TRIAL.

Twenty teams in all have been entered, aggregate performance prizes being competed for in Classes A, B, C, F, and G, as follows:

CLASS A.—New Imperial (competitors 3, 4, and 5); Levis (6, 7, and 8); Sun-Vitesse (10, 11, and 12).

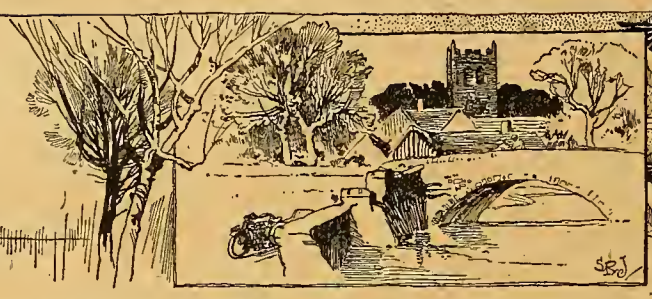
CLASS B.—Raleigh (17, 18, and 19); Allon (20, 21, and 22); O.K.-Junior (26, 27, and 28); A.J.S. (23, 24, and 25); Connaugbt (32, 33, and 34).

CLASS C.—Sunbeam (42, 43, and 44); Ariel (59, 60, and 61).

CLASS F.—P. and M. (85, 86, and 87); Sunbeam (88, 89, and 90); New Hudson (92, 93, and 94); Rudge (95, 96, and 97).

CLASS G.—Martinsyde (102, 103, and 204); B.S.A. (108, 109, and 110); Harley-Davidson (118, 119, and 120); A.J.S. (121, 122, and 123); Matchless (124, 125, and 126); Ariel (128, 129, and 130).

Two-Stroke Phenomena.



Original Views on Four-stroking and the Management of Two-stroke Motor Cycles.

HAVING ridden a single-geared Levis during the past twelve months, the writer presents for the consideration of motor cyclists his opinions on a number of points peculiar to the running of the two-stroke engine.

In the first place it must be a matter of surprise to the mechanic that so much popular misconception still exists upon the matter of four-stroking. Four-stroking is not necessarily a defect in the running of a two-cycle engine. That is to say, troublesome and annoying as the phenomenon is, it is to a great extent an inevitable and a natural one. It must be borne in mind that a profound contrast exists between the mode of action of a four-stroke valve and a two-stroke port.

Difference between Poppet Valves and Cylinder Ports.

The inlet valve of a four-stroke engine remains open during the whole of the induction stroke so that the gas has plenty of time to get in; but in the two-stroke engine the port is open for merely the briefest instant—when uncovered by the piston skirt. Therefore when the engine is working very fast at low throttle opening, as, for instance, when going downhill or before a strong wind, the gas simply hasn't time to get through the momentarily opened port in sufficient quantity to furnish a new charge. When the engine is working fast and the throttle is shut down only a whiff of gas can pass through the port in the brief instant available, and this is by no means the total quantity the crank case could suck in were the port open a little longer, as when the engine is not turning so rapidly. Indeed so little may enter that the crank case is still under suction when the piston descends, and if you compress a gas at low pressure to start with, the final pressure in the crank case when the transfer port is opened may not even attain one atmosphere, and hence none whatever will pass into the cylinder. Therefore the engine does not fire on the next stroke, but on the stroke after that another whiff will enter the crank case and add itself to the gas already there so that enough is now present to produce a snort through the transfer and charge the cylinder ready for the next spark. Often even two revolutions are not sufficient to get enough gas in and the engine takes three (six-stroking) or four revolutions (eight-stroking) and so on.

Inevitable and Accidental Four-stroking.

This natural misfiring then must be clearly distinguished from four-stroking due to excess of oil or too rich a mixture, though it may augment both. The engine, however well made and carefully designed, cannot help exhibiting the phenomenon, which will inevitably appear when the revolutions are in excess of what would be produced by a normal throttle-opening under load, which slows the revving and hence allows the ports to keep open longer. No amount of ingenious arrangement of the ports, or of accurate lubrication, or blaze at the plug, can persuade gas to fire which hasn't time to get in.

It is to be noted that the two factors involved in natural four-stroking are the *size* of the throttle opening and the *duration* of the port opening. Increase either and the firing improves, though the machine may travel faster than you want it. A two-stroke machine may descend a long hill firing only once every sixteen revolutions (sixteen-stroking—which is not a joke about some atrocious engine, but a fact to be observed and explained in the best). Now when the gradient lessens the engine is gradually put under an increasing load and the firing improves in a series of definite stages. First it fourteen-strokes, then twelve-strokes, ten, eight, six, four, and finally two-strokes. The change in beat can be observed through the series by the rider who is patient and interested enough.

It would be outside the province of this article to deal with four-stroking caused by over-lubrication or too rich a mixture. Curiously no very great loss of speed can be observed under such conditions. The machine seems to travel as fast with the engine four-stroking as when it is working properly, the beats when four-stroking being presumably of double the strength when two-stroking. It is this feature that renders four-stroking so harmful to the engine and irritating to the rider. When the charge is surfeited with fuel the chemical changes at explosion are different from normal, the difference being analogous to that between the gentleness of gunpowder and the violence of high explosive.

The Release Valve as a Tell-Tale.

A few miscellaneous phenomena of the two-stroke engine may now be referred to. The compression-release valve, when exposed and not fitted with a duct to lead the spluttering gas into the silencer, affords by the sound it makes when opened a ready means of detecting bad running of the engine. If the engine is running smoothly there should be a succession of sharp hisses from the valve when raised. Frequently, however, there can be heard a very harsh, grinding, or even rattling sound. As this noise is only apparent

Two-Stroke Phenomena.—

when the valve is raised the rider may be pardoned for concluding that the valve itself is the cause.

The cause, however, is insufficient lubrication. Indeed, the engine can be *felt* running badly, but not *heard* until the valve is lifted. The explanation is a simple one. It corresponds to opening the door of an engine-room containing some noisy machinery and being deafened by the sound, while if the door is kept closed it is comparatively quiet outside. The piston is really grating in the cylinder, but the cylinder is so hermetically sealed that you do not hear the noise till you open the valve and let the sound out. If the sound when the valve is raised is a soft hiss all is well, but if there is any harshness, however slight, it is a call for more oil. No two-stroke rider need ever suffer seizure if he understands the sound of the release valve.

An Incidental Advantage.

Before leaving the subject of release valves, I would suggest that the open valve, although it is alleged to splutter oil over the rider's clothing, has quite an important though incidental advantage over the closed kind. The intensely sharp hisses it makes are the most effective warning note devised in cases of emergency. Pedestrians and dogs may stand in your way, peacefully impervious to the sound of your horn, but the moment the hissing valve is opened they jump as if it were the Last Trump. And the point is that in an emergency you instinctively raise the valve—so that you stop the machine and give a last desperate warning into the bargain.

Running Backwards.

A curious feature of the two-stroke engine is its capacity to run backwards. This peculiarity may prove exciting under some circumstances. For instance, on a steep hill the rider may have occasion to paddle his machine backwards into the curb, and when he drops the valve to stop, the engine suddenly fires vigorously down the hill. On a machine with fixed ignition this property is capable of an entertaining application—in theory, at any rate. On a steep hill your small engine conks out, partly because you cannot retard the spark. You have got a heavy portmanteau on the carrier, and the engine cannot even manage this, even if you are prepared to run alongside. So turn the machine round and set it going backwheel first. Since the engine is revving opposite to normal the really advanced spark now becomes a retarded one, which is just what is wanted.

And if you are clever enough to guide the bike straight you can get up after all—by brains instead of brawn.

GEORGE F. SLEGGS (B.Sc.).

CHAIN TENSION ON SPRING FRAMES.

Small Effect of Chain Centre Variations on Well-designed Machines.

AN impression that pivoting the chain stays other than at the chain sprocket centre is detrimental in a spring frame seems to be current, and it is frequently brought to light in criticisms of fully sprung machines.

While admittedly not theoretically perfect, the swinging of the chain stays from a point not exactly coincident with the front sprocket centre does not

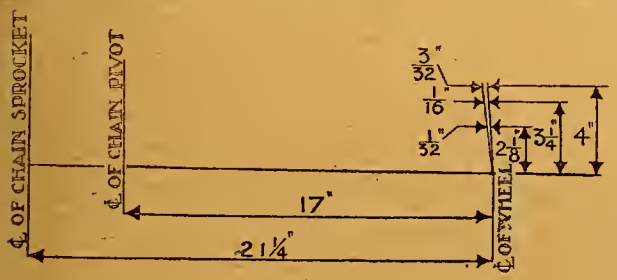


FIG.1

deserve all the adverse criticism it receives, and a true statement of the facts is only fair to the many excellent frames embodying this feature.

The alleged defect of course is the consequent variation of chain tension, but this proves on investigation to be almost a negligible objection in a well-laid-out frame design.

Fig. 1 is a diagram of the A.B.C. rear springing, showing that with a deflection of 2½in. (probably never exceeded under ordinary conditions) the reduction of the sprocket centre distance is only $\frac{1}{32}$in., while even under a 4in. deflection, the maximum given by the makers, the reduction is but $\frac{3}{32}$in.

A mathematical check is very simple. In the second figure :—

$A = 17^2 - 4^2 = 16.523.$
$B = 4\frac{1}{4} + 16.523 = 20.773.$
$C = 20.773^2 - 4^2 = 21.154.$
$X = 21.25 - 21.154 = .096$in. or a little over $\frac{3}{32}$in.

For the human individual who habitually distrusts mathematics the writer can testify that when the machine is loaded with one person in the saddle and another on the footboards, no slackening of the chain can be detected by the usual test for vertical play at the centre of its span.

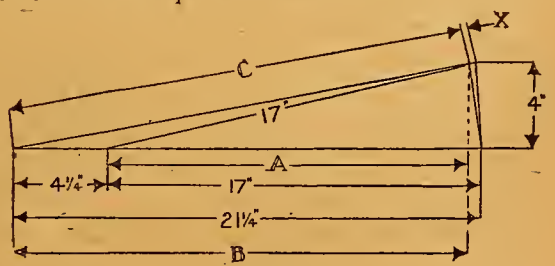

FIG.2.

The A.B.C. is chosen to illustrate this article only by reason of the machine being ready at hand. The figures on the diagram were obtained by accurately setting out the dimensions full size.

R. J. B.

CLUB NEWS.

Rochester, Chatham, and District M.C. and L.C.C.

A run will take place to Palm Bay, Margate, on the 20th inst. The reliability trial for "The Short Bowl," which had to be abandoned previously owing to insufficient support, will probably be run off during September.

Epsom and District M.C.C.

An enjoyable social run was held on the 30th of last month from Epsom to Bognor and back.

Inquiries from neighbouring clubs desirous of organising a joint reliability trial will be welcomed by the hon. secretary, Mr. Y. E. Himing, "The Laurels," Park Hill Road, Ewell.

North-Western Centre A.C.U.

Another gymkhana is being held on the 19th inst. at Blackpool, and members of all affiliated clubs are invited to take part in what should prove a very enjoyable event. Particulars are available from Mr. A. Taylor, "Sunnyfield," 84, Hornby Road, Blackpool.

Uxbridge and District L.C. and M.C.C.

The first annual competition for the Reeves Cup took the form of a reliability trial over a fairly easy course from Uxbridge to Marlborough and back, a distance of 120 miles. The premier award was gained by F. F. Hickman (550 Triumph), and a second prize of an electric lighting set went to R. Dalton (499 Sunbeam).

Bristol M.C. and L.C.C.

A hill near Clifton Suspension Bridge was the scene of considerable public interest lately when a variety trial was held. The best performances were made, in the acceleration test, by R. Houghton (349 A.J.S.); brake test, by C. W. Rankin (G.N.); speed judging, by F. G. Mann (998 Harley-Davidson sc.); and, in the fast and slow hill-climb, by H. Jacobs (976 Zenith), the club captain. Results, based on points, are as follows: (1) R. Houghton (349 A.J.S.), 327; (2) F. G. Mann (998 Harley-Davidson sc.), 312; (3) C. W. Rankin (G.N.), 311.

North London M.C.C.

In the club cup trial held on the 29th of last month the club cup and a gold medal were awarded to C. W. May (550 Triumph). The lightweight Radco Cup and a gold medal were won by R. H. Baxter (247 Radco), and silver medals were gained by the following: T. W. Sullivan (247 Levis), L. P. Walter (550 Triumph), C. L. Sprosen (293 Connaught), F. Roberts (596 Indian), B. Staley (550 Triumph), and J. Hyatt (398 A.B.C.).

S. F. Colman (770 James) and R. H. May (557 B.S.A.) both secured bronze medals.

Scottish Western M.C.

Full results of the speed trials, an account of which appeared in last week's issue of *The Motor Cycle*, are as follows:

275 c.c. Formula.—A. Best (249 New Imperial), time 30 13-16s., figure of merit 1180, m.p.h. 58.3.

275 c.c.—A. Best (249 New Imperial), time 31 3-16s., m.p.h. 57.8.

350 c.c. (Expert barred). Formula.—W. Kennedy (249 New Imperial), time 34 5-16s., figure of merit 1150, m.p.h. 52.5.

350 c.c. Formula.—A. H. Alexander (348 Douglas), time 30 7-16s., figure of merit 1250, m.p.h. 59.0.

350 c.c. (Expert barred).—G. C. Walker (348 New Gerrard), time 32 1-16s., m.p.h. 56.2.

350 c.c.—G. Kelly (349 A.J.S.), time 28 2-16s., m.p.h. 64.

600 c.c. (Expert barred). Formula.—G. C. Walker (348 New Gerrard), time 32 7-16s., figure of merit 948, m.p.h. 55.5.

600 c.c. Formula.—A. L. Downie (349 A.J.S.), time 28 10-16s., figure of merit 1173, m.p.h. 62.8.

600 c.c. (Expert barred).—J. B. Longmuir (499 Sunbeam), time 29 11-16s., m.p.h. 60.6.

600 c.c.—G. Kelly (349 A.J.S.), time 27 5-16s., m.p.h. 65.9.

UNLIMITED c.c. Formula. (Expert barred).—G. C. Walker (348 New Gerrard), time 33 5-16s., figure of merit 899, m.p.h. 54.0.

UNLIMITED c.c. Formula.—A. L. Downie (349 A.J.S.), time 26 15-16s., figure of merit 1330, m.p.h. 66.8.

UNLIMITED c.c. (Expert barred).—J. B. Longmuir (499 Sunbeam), time 28 14-16s., m.p.h. 62.3.

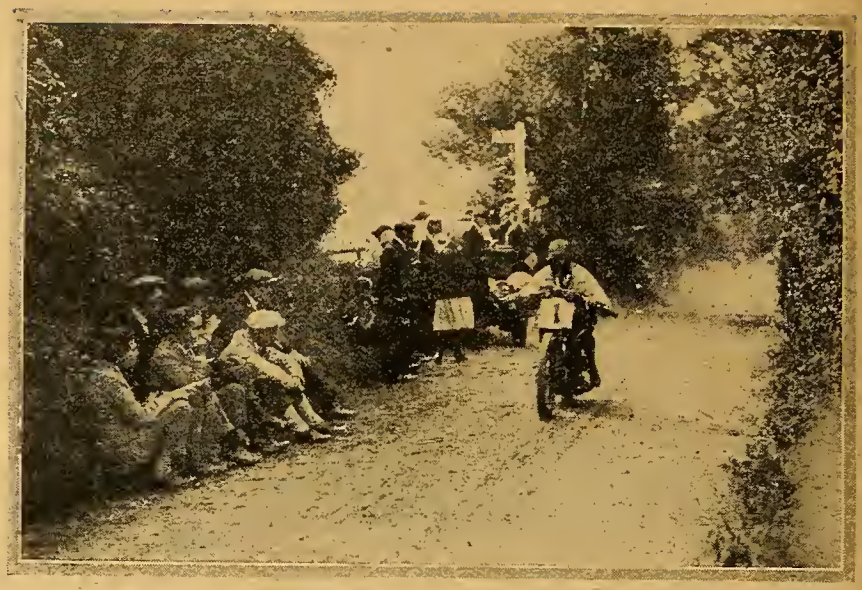
UNLIMITED. A. L. Downie (349 A.J.S.), 26 15-16s., m.p.h. 66.8.

600 c.c. Sidecars. Formula.—G. Kelly (349 A.J.S.), time 34 2-16s., figure of merit 1244, m.p.h. 52.7.

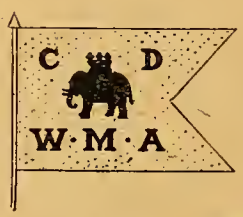
OPEN 600 c.c. Sidecars.—E. A. Small (499 Sunbeam), time 34 3-16s., m.p.h. 52.65.

UNLIMITED. Sidecars. Formula.—A. H. Alexander (499 Douglas), time 34 6-16s., figure of merit 1114, m.p.h. 52.3.

UNLIMITED. Sidecars.—A. H. Alexander (494 Douglas), time 33 3-16s., m.p.h. 52.7.



H. Symonds, who on a 499 c.c. Duzmo obtained two firsts at the recent Croydon Club's hill climb at Marlpit Hill.



Yellow and black are the colours of the Coventry and District Works Motor Association.

The badge of a prominent Northern club.

North-West London M.C.

The interclub hill-climb which had to be postponed owing to unfavourable weather conditions, will probably take place on Saturday, September 23rd.

Southport M.C.

Communications relating to the race meeting on Saturday next should be addressed to Mr. Rowland Hill, at 75, Sefton Street, Southport, and not at Manchester.

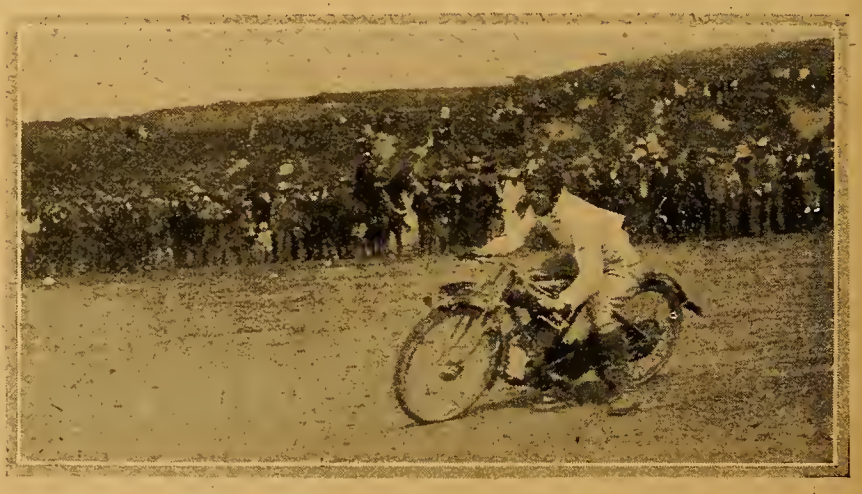
Sheffield M.C.C.

The weather was very unfavourable for the reliability trial for the Douglas Vickers cup, which was held recently over a course which included the famous Derbyshire Hill, Mam Tor.

H. Oscroft (976 Enfield sc.) was first with a loss of only 3 marks, whilst A. Bennett (770 Hazelwood sc.) came in second with a loss of 4 marks. J. Cox (976 Matchless sc.) and C. W. Potts (749 James sc.) tied for third place with a loss of 5 marks each.

Eastbourne and District M.C.C.

Speed trials have been arranged to take place at Eastbourne on Saturday, Sept. 9th, commencing at 2 p.m., when classes will be run for motor cycles, sidecars, cycle cars, and light cars (not exceeding 1,500 c.c.), and these will be open to members of the following clubs, in addition to members of the organising club:—Wallington and District, Brighton and Hove, Surbiton and District M.C.C., and members of the B.M.C.R.C. Entries for these events should be addressed to Mr. H. V. Warren, 73, Terminus Road, Eastbourne, and received by him not later than Sept. 6th.



Cornering at Pendine. C. Sgonina on the o.h.v. A.J.S. converted by himself.

Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

HAMPERING GOGGLES.

Sir,—Like your other correspondents, I have found goggles of all types an inconvenience, and now do not use them at all, but wear a pair of ordinary eyeglasses instead. These are made of clear glass, and while not restricting the range of vision protect the eyes sufficiently from wind and dust.

E. KUCHKOFF HEAD.

SOLDERED BOWDEN NIPPLES.

Sir,—With regard to Mr. A. E. Bottomley's letter, I have experienced similar mishaps with my Bowden wire controls.

Changing gear on my machine is effected by a wire cable (Bowden) and the wire has snapped four times in all (three times within the last month), and each time the wire parted near the nipple.

My opinion is that the nipple is too small to hold the wire. TWO-STROKE.

Durham.

Sir,—My machine is only one month old, and five strands of the clutch wire have become detached from the handlebar lever nipple.

If the strands are placed in position it can be seen that they just touch the nipple, showing that they have broken and not pulled through.

This is probably due, as Mr. Bottomley suggests, to the heat of soldering weakening the wire at this point. THOS. H. SALTER.

DOPE.

Sir,—For the benefit of other readers, I should like to give my experience of "Fam-O."

My machine is an Allon two-stroke, and my petrol consumption has been 112 m.p.g.

I used one dose from the 1oz. bottle of "Fam-O" to the gallon of fuel, and, although I did not expect that about a teaspoonful of this would give any increased mileage, I was agreeably surprised to find that I obtained 132 m.p.g. I find that for the same speed as before using "Fam-O" I do not require such a large throttle opening, and a smaller jet would no doubt bring about a 25 per cent. increased mileage, as claimed by the makers.

I have not used this mixture for the purpose of decarbonising my engine, so perhaps some reader who is carrying out trials will give us his opinion as to results.

I have no connection whatever with the firm responsible for the mixture. NOLLA SYADLLA.

BRISTOL'S FREAK HILLS.

Sir,—It was with great surprise, and with no little disgust, that I read the letter from Mr. J. A. Newman relative to the inter-club trial between Bristol and Bath.

I would point out to Mr. Newman that, in the recent trial organised by the Weston-super-Mare Club over a similar route, not one solo competitor made a clean climb; he himself failing about halfway up. I would also remind him of his performance on East Dundry in the first circuit of last year's Bristol and Bath inter-club trial.

Regarding Mr. Newman's comments relative to the Arctic Trial, the fact that the three hills in question were washed out seems to have been forgotten. The reasons why the two clubs named took no part whatever in this event are well

THE LIGHTER SIDE OF CLUB LIFE. Gymkhana events provide an excellent method of introducing the social element into club life. Hot-plug-changing competitions and the like provide amusement for the least technical or non-expert members and are never despised by the real enthusiast.

known to the Auto-Cycle Union, and in particular to the Board of the Western Centre. It suffices to say that these reasons occasioned the withdrawal of the Brisol, Bath, and Kingswood Clubs from this centre.

These clubs are three of the keenest organisations in the Kingdom, and approximate a total membership of 450 in all, Bristol and Bath possessing about 200 members each, and Kingswood about 50. The latter club has only recently been formed, but is very efficient and well organised. The trials organised by these clubs are not exactly the milk-and-water affairs inferred by your correspondent, and are always conducted and run off, both by organisers and competitors, in the most sporting spirit.

REX. FOWERAKER,
Hon. Secretary.

Sir,—The letter of Mr. J. A. Newman is hardly that of a sportsman. I am not a competitive motor cyclist, but know the hills in question to be undoubtedly well worthy of the description "freak."

There is a distinct difference between *East* Dundry Hill and the Dundry Hill mentioned by Mr. Newman, the latter being a main road hill, and the former a steep grass-grown cart track. True, neither the Bath nor Bristol Clubs participated *as clubs* in the "Arctic" Trial, but several Bristol Club members competed and carried off premier honours; to instance one member only, Mr. Walters, the first sidecar competitor.

W. H. GOODENOUGH.

Sir,—East Dundry, Ubley, and Burledge hills have been used frequently in Bristol, Bath, and Weston-super-Mare Clubs' trials, and are well known to many old hands in this district; under bad weather conditions they may be termed, quite frankly, freak hills; when dry, they are merely difficult. These three hills have figured in some six or more trials in the past two years, and the experiences of competitors, of more than average ability, leads them to the firm opinion that, Burledge in particular, in wet weather, is an impossible proposition without some additional aid in the shape of chains or special tyres; even then the solo rider's chances of keeping his balance on the atrocious surface are very small.

If further evidence is required, Mr. Newman's own performance (his exceptional experience and abilities in trial riding, are undoubted) in a recent trial of the Weston-super-Mare Club, reported in your issue of August 3rd, page 179, supplies it. On his usual make of machine, on which he has scored so many victories in the past twelve months, he failed low down on Burledge, and ultimately scrambled to the top, footslogging and with his engine knocking painfully, to arrive in the control in a temporarily exhausted condition. East Dundry followed later, Ubley was not included, but Mr. Newman does not figure in the list of awards. Couple this with his uninspiring performance on East Dundry in the inter-club trial of 1921, when that hill was in good condition, and there is, I think, sufficient proof of the freakishness of these hills. If they are not freaks, surely Mr. Newman, of all riders, should be able to climb them. He lives within a few miles of Burledge, and has every opportunity of studying the hill. General opinion places Burledge as the worst, Ubley next so, and East Dundry the easiest of three very bad hills.

His references to the "Arctic" Trial of April last have little to do with the point at issue: for reasons well known—abnormal weather—these hills *were not included* in the Western Centre A.C.U. Trial. Mr. Newman's letter would lead an uninformed reader to suppose that they *were included*, but the trial finished before they were reached, hence the Western Centre Trials Committee has no actual trials' experience to back its opinions as to whether they are freaks or not. It is interesting to note that Mr. Newman's knowledge of these hills was gained originally from his attempts in Bristol Club events.

F. A. SIMPSON,
Press Secretary,
Bristol M.C. and L.C.C.

STANDARD BELT LENGTHS CONDEMNED.

Sir,—A few days back I asked a garage owner at Sleaford if he had a belt to suit a c.s. Triumph; he told me that the length that was available was 8ft. I only required 6ft. 4in., and thus had to purchase 1ft. 8in. more than was necessary.

I would suggest that suitable lengths should be supplied for standard machines, or long lengths so that the required length can be cut, and I was informed that the makers will not do this.

S. C.
Sleaford.

INFLUENCE MACHINES FOR I.C. ENGINES.

Sir,—I have read with considerable interest your readers' letters on this subject. I may say right away that they may disillusionise themselves as to the probability of such machines in practical use.

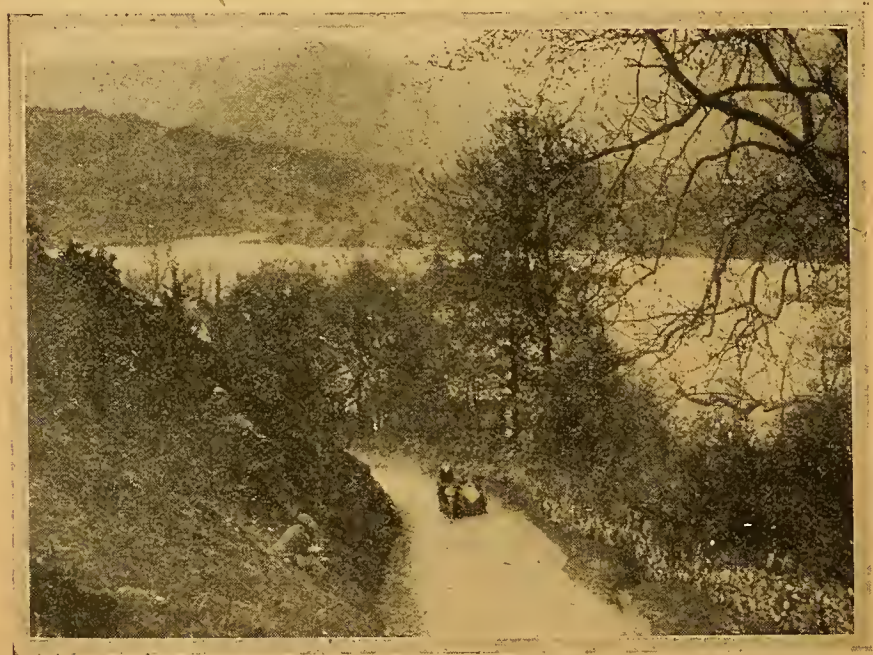
A magneto or coil ignition gives a current of several thousands of an *ampère*, which, although admittedly in excess of requirements, allows a margin for leaky insulation, etc.

A Wimhurst of large size (say, 20in. plates) will only give a current of a few millionths of an *ampère*, which is insufficient to cause ignition, as I satisfied myself many years ago. It is true that by storing the "juice" in a Leyden jar or condenser an adequate spark might pass from time to time, but for continuous sparking of a multi-cylinder engine a multi-plate machine would have to be used, which would be much more bulky than the magneto, even if not so heavy.

There exists even then the difficulty of timing as the spark would jump unevenly, thereby firing one cylinder relatively before another.

I had thought to overcome this by a distributor filled with oil, or by unshort-circuiting the current at each sparking plug segment, but I am afraid with all these difficulties the scheme becomes impracticable, fascinating though it is. I may say I am not prejudiced against the influence machine in so much as I am plotting out a 40-plate machine with 4ft. discs for X-ray work.

MORTIMER A. CODD, F.Ph.S.



August may not be the finest month for seeing the English Lakes at their best, but hundreds of motor cyclists are at present touring this mecca of the foreign visitor and pride of the North Country. A picturesque glimpse of Grasmere from the summit of Red Bank.

VEHICULAR TAXATION.

Sir,—Your correspondents, Messrs. G. J. Hickling and "3½ Triumph," who advocate the taxation of cycles, perambulators, scooters, toy engines, etc. (more or less), never appear to have given any thought to the subject of universal vehicular taxation. Let them ask themselves why a push-bicyclist—a good honest word, Mr. Editor, which is more derogatory to the lazy ones who don't (or ought not to) push their bikes than those who do—goes twice as fast and thrice as far in a day's journey than a pedestrian. Surely it is because he moves with less *friction*. And what destroys roads?

Furthermore, the damage done to the roads is roughly proportional to the tyre bill of the machine, given similar tyres. My tyres cost 30s. apiece, complete, and last me 10,000 miles. A humble push-bicyclist cannot estimate the motor cyclist's tyre bill; but I have seen it stated that it costs him ¼d. a mile: £10 per 10,000 miles. No, sir; I submit that pedestrians be taxed according to their boot bill, or cyclists be subsidised according to their tyre consumption.

I hold no brief for roller skates or toy engines, but am only an enthusiastic cyclist who would buy a motor cycle if he had the cash. M. E. L.

Cambridge.

"THE CHARMS OF 12 M.P.H."

Sir,—"Die Hard" protests at the proposed abolition of the speed limit and votes 12 m.p.h. ample and 20 m.p.h. road hogging.

I suggest he sells his machine and buys a pushbike; this would no doubt fill all his requirements at far less expense. Or, if motoring especially appeals to him, what about a motor bathchair? To drive in top gear at 12 m.p.h. is cruelty to motor cycles. QUIXIX.

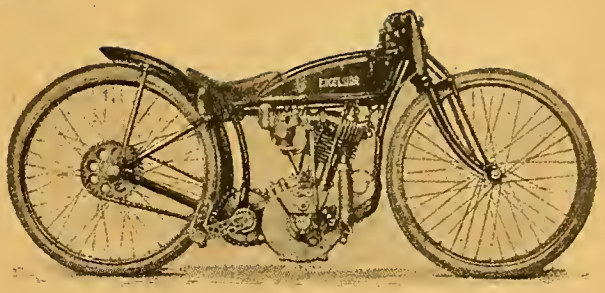
London, W.2.

Sir,—We would suggest that "Die Hard" travelling at 12 m.p.h. with his gaze fixed upon the scenery is blinder to the dangers of the road than the average motor cyclist at 30 m.p.h. with his eyes where they should be, and that therefore he constitutes the greater menace to the community at large. TWO OF THEM.

Windsor.

Sir,—There were very few roads where "25" is unsafe! Emphatically it is unsafe to drive at 12 m.p.h., as steering and steadiness are not so good; anyway, it is not comfortable, and the safest speed is always the most comfortable and the one at which steering is best. Either "Die Hard" has a deplorable lack of confidence in himself or else an equally deplorable lack of control of his machine. Motor cyclists who are continually doing 45-50 m.p.h. are rather a nuisance, but I would far rather have them than wobbling road-crawlers. One can look at scenery and be perfectly at ease at between 20 and 25 m.p.h., and, in addition, the machine is travelling fast enough to be properly controlled and balanced. The idea that speed is unsafe is a relic of the "red flag" days; we shall get over it one day! ROCKER.

Berks.



NOT FOR THE BRITISH MARKET. Clams and synthetic whisky are not the only products of America that seldom reach Britain; this single-cylinder, single-gear "American X" with rigid forks, for example, would be but slightly less useless on Brooklands, than on English roads. Yet it, no doubt, does well on the saucer-tracks of the U.S.A.

Sir,—I quite agree with "Die Hard" that it is not safe for him and others like him to exceed 20 m.p.h.; but why should not those capable of higher speeds indulge in them? Although my machine is not a track racer, I frequently touch "50" without danger to myself or others.

Lichfield. SPORTSMAN.

Sir,—Allow us to protest against the protest of "Die Hard" against abolishing the speed limit.

We admit that 12 m.p.h. is a fit speed for the nervous.

Winston. SCOTT SQUIRREL MERCHANTS.

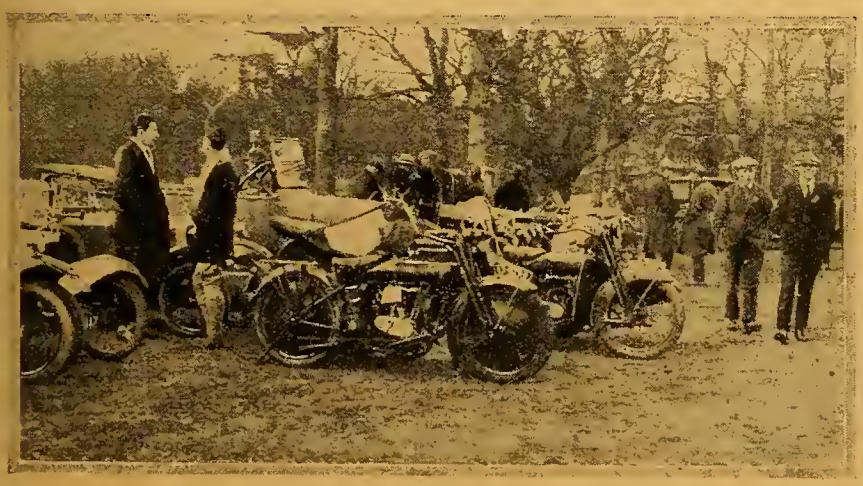
Sir,—Surely "Die-Hard" is not in earnest when he recommends motor cyclists to travel by train if they wish to exceed 20 m.p.h. Fancy trusting oneself to an unknown driver who hurtles along at from 50 to 60 m.p.h.! The train has not even a fair chance, for if anything gets in its way it cannot dodge, but has to run into it. And it is nearly always going somewhere where one does not want to go. And the fares—awful! And one is always reading of accidents on the railway. No! Give me a motor cycle every time.

Joking apart, however, I was out on the road with a sidecar outfit on Sunday, August 6th, and was travelling at what was an easy pace for my machine—25 m.p.h. on the main road, slowing to 20 for villages and country roads. There was a lot of traffic on the road, most of which I was meeting, for I seldom passed other motors, except 'buses or other heavy vehicles, and I myself was seldom passed. This shows, what I have often noticed, that the majority of motor cars and motor cycles travel on the main road at a speed of about 25 m.p.h., and, presumably, consider it a safe pace.

Given a reliable machine, there are plenty of roads where speeds of even 35 or 40 m.p.h. are quite safe, and where 12 or 15 m.p.h. would simply appear ridiculous.

Ipswich. H. W. B.

Sir,—"Die Hard" must have either a remarkable sense of humour or softening of the brain. At the present moment I am unable to decide which; but that anyone should write



SUNDAY ON THE TRACK. Any fine Sunday, nowadays, a certain number of London motor cyclists—who, incidentally, are quite a type to themselves, and entirely different from, say, Yorkshire enthusiasts—make Brooklands track their *rendezvous* for the day. A scene on the members' hill.

such a letter with anything approaching seriousness at all passes my comprehension. For that reason I imagine he must be a wag, and I am inclined to regard the letter as a "leg pull." On the other hand, if he in all seriousness means what he purports to, then I doubt whether his machine is capable of more than 20 m.p.h. Possibly, like a rider I once encountered, he has his throttle lever so arranged on the bar that it fouls another lever, when opened out sufficient to let the machine do 20 m.p.h.

For admiring the scenery, he would do infinitely better on a push-bike, I should imagine, and with a minimum of trouble. His allusion to blinding at 35 miles an hour is really too much of a good thing, and coupled with the statement that "fifteen is possible, but not as safe as 12" (presumably he always keeps one foot on the ground in case he falls), I think, conclusively proves that he wrote this letter with a contented chuckle and possibly "his tongue in his cheek.' So I take off my hat to "Die Hard," or rather, to his sense of humour.

Crewe. O.H.V. BROUGH SUPERIOR.

Sir,—May I heartily endorse "Die Hard's" opinion on the suitable speed for a motor cycle? The beauties of the field and hedgerow, the little wayside flowers, etc., cannot be properly appreciated when one is tearing madly along at 18 miles an hour. This modern passion for speed is, I fear, but only another sign of the same spirit which induces young ladies in sidecars to call "Beaver" as they pass me, doubtless, I suppose, on account of my long white beard, which sometimes flows out behind me. May I be allowed to subscribe myself "DIE HARDER?"

Cambridge.

Sir,—I myself can see all the scenery I want to see at 20 m.p.h. If "Die Hard" cannot, why does he not stop and then make up the speed in between the places with beautiful scenery? Also there are such places as the Great North Road, which has miles and miles of the dullest scenery possible.

"Die Hard" says that if you want to go faster go by train. This is absurd when you compare the cost with that of motor cycling. "MAGNETO."

Isle of Wight.

UNCONTROLLABLE VALVE BOUNCE.

Sir,—After experiments with springs I find that, after slamming a valve on its seating it cannot be prevented from bouncing, however strong the spring, and this theoretically means, in the case of the *exhaust* valve, that the bounce takes place during the induction stroke and the piston draws in some of the exhaust gases and also reduces the possible amount of mixture that could be induced into the cylinder; and, in the case of the *inlet* valve bounce takes place on the compression stroke and not only allows some of the mixture out again, but reduces the compression ratio. (I presume these ratios are measured by turning the engine over slowly—quite a different matter to what is happening at speed.)

After all, a cam does not *push* a valve up at speed, but knocks it up and the spring jumps it down again, and this is the cause of bouncing.

Another point: the sleeve valve is just developing, and engines so fitted probably can do better on a lower compression and a larger carburetter than in the case of the same sized engine with poppet valves.

The remarkable performance of a two-stroke in this year's lightweight T.T. seems to add weight to the above statements, especially as everybody must admit that this type of engine is very crude from the mechanical point of view.

I am only an amateur, but I would like to know what trade men do to overcome this sort of thing when racing.

Johannesburg. COLONIAL.

ALL IN PIECES.

Sir,—With reference to "Digger's" letter in which he eulogises the very sporty behaviour of his 1913 Triumph, I really must write and tell you about my 1902 super sports model machine.

This faithful old 'bus which, as I do not wish to raise an unseemly blush to the cheeks of its manufacturers, shall be nameless, has never yet let me down; and, on one memorable occasion, while on a holiday jaunt from Land's End to John-o-Groat's, not only the big end, piston skirt, etc., deserted me, but the complete engine fell out. In a superb determination to triumph over difficulties, my gallant mount pulled itself together and finished the journey in record time, the average speed for the whole trip being slightly under Bennett's time in the T.T. race this year.

I would add, in case the above remarks induce in your correspondent, "Digger," a desire to surpass even this performance, that having kicked up my machine for the last time on this journey, I had considerable difficulty in disengaging my foot from my iron bedstead, and have suffered from corns ever since. NIGHTMARE.

Birmingham.

Sir,—Probably many amused readers are wondering what "Digger" had for supper the night he wrote to you. The awards he mentions were: second in novices class, and private owners' prize (which he chooses to call first).

Birmingham. AMUSED FRIEND.

PILLION RIDING.

From Sir Harry Brittain, K.B.E., M.P.

Sir,—In the House of Commons on the 3rd inst. a member put up a question trying to prohibit pillion riding.

I see that Hansard somewhat misreports a supplemental question of mine, a correction of which I have sent in. That correction, however, will not be made until the bound copy of Hansard appears, and, in the meantime, I do not wish it to go abroad among my many motor-cycling friends that I am one of the kill-joys who wish to prohibit pillion riding.

I have during my life had the good fortune to take some small part in almost every game and sport. I rode on a motor bicycle (not for very many yards!) in 1895 in France, and have driven cars almost since they were invented.

There may be a small risk in pillion riding, but it is a very, very small one as far as the careful cyclist is concerned, and certainly no more than the risk entailed in such winter sports as ski-ing and tobogganing or fox hunting.

To the average Englishman a slight spice of danger detracts in no way from the sport, nor will it, I hope, ever do so.

I am a keen champion of the motor cycle, and the joy it brings to the boys and girls of England, and, as far as I am concerned, I will certainly do anything I can to resist putting up the German "Verboten" with regard to pillion riding. HARRY BRITTAIN.

Sir,—As I have ridden many thousand miles with a pillion passenger I should like to express my opinion through the medium of your paper on the subject of sprung pillion seats.

For controllability in emergency, freedom from fatigue, and for balance, I prefer to ride without a pillion seat at all. Many of my passengers prefer to ride without a sprung seat, as they complain of the swaying.

London, N.W.6 BWANA MKUBWA.

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook of the motor cycle.
Price net 2/6. By post, 2/10.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

CURRENT CHAT

Times to Light Lamps.

August	17th	8.49 p.m.
„	19th	8.45 „
„	21st	8.41 „
„	23rd	8.37 „

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Heart-braking!

Several Croydon motor cyclists have been fined recently for possessing "only a back-pressure brake."

Hush!

Ford has now turned out his six-millionth flivver. Now that everybody is supplied, suggests a weary American journalist, let's hear no more about the things!

Tank-Corps Motor Cyclists.

Presuming that all survivors of the original Tank Corps men who were at Bisley and then Thetford are still motor cyclists, a reader suggests a meet of the first five companies of the Heavy Section, M.G.C., as it was then called.

The Unappreciated Charms of 12 m.p.h.!

Such interest did the recent letter deploring the modern tendency to travel at speeds in excess of 18 m.p.h. arouse among our readers that one correspondent sent his indignant reply by express post, which cost five times the normal postage rate. It is curious, however, that few share the editorial view of doubting "Die-hard's" seriousness.

Is Brooklands Over-rated?

Opinions of provincial motor cyclists who have visited a Brooklands meeting might provide confirmation or otherwise of the theory we heard the other day that the Weybridge track is a much over-rated place, and that the bulk of its *habitués* would fail miserably when pitted against unknown local men on a course or hill with which they were previously unacquainted.

Something Wrong.

Lunching in Beaconsfield on his way to the Pendine Sands race meeting a member of *The Motor Cycle* staff witnessed the most amazing example of road-hogging in all his career. A large black touring car hurtled through the town towards Uxbridge at fully 35 m.p.h., keeping well into the right-hand side of the wide main street and forcing cars and motor cycles coming in the opposite direction on to their wrong side. Several smashes were avoided by some miraculous means. Either the driver was mad or he was a foreigner in ignorance of our rule of the road. In any case, there is something wrong with a law which permitted him to occupy a seat behind the wheel at all.

Wireless Sets for Motor Cycle Police.

Experiments are being made with a view to equipping all Michigan (U.S.A.) motor cycle police with wireless receiving sets.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light, car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

New Dimming Device?

From a London evening paper: "Rover comb., k.s., Easting, 3 spd lamps, as new; apply——."

Out of Action.

Where have all the scooters gone? There must be quite a number lying dormant, disregarded and dusty.

We Live and Learn.

Norton motor cycles, according to an American trade paper, are "made by Tom Norton, Glandrindod Wells, England." Italics would lose their value in a case like this.

Reassuring News.

We are pleased to hear that Douglas Alexander, the well-known Scottish rider, is on the way to a good recovery from his crash at the St. Andrews speed championships. He wishes to thank all those who helped after the accident.

Resource.

Recently a rider lost his tank filler cap whilst traversing a coast road. Nothing daunted, he made a short search along the high-water mark on the beach, and soon discovered a suitable cork to fill the vacancy.

Fuel Consumption Test in Open Trial.

In the Cheshire Centre A.C.U. open one-day reliability trial, to be held on September 2nd, a fuel consumption test on "A.C.U. formula" will be a deciding factor in arriving at the final results. The start will be near Knutsford, fuller particulars being available from Capt. W. G. Hill, Hill's Garage, The Newgate, Chester.

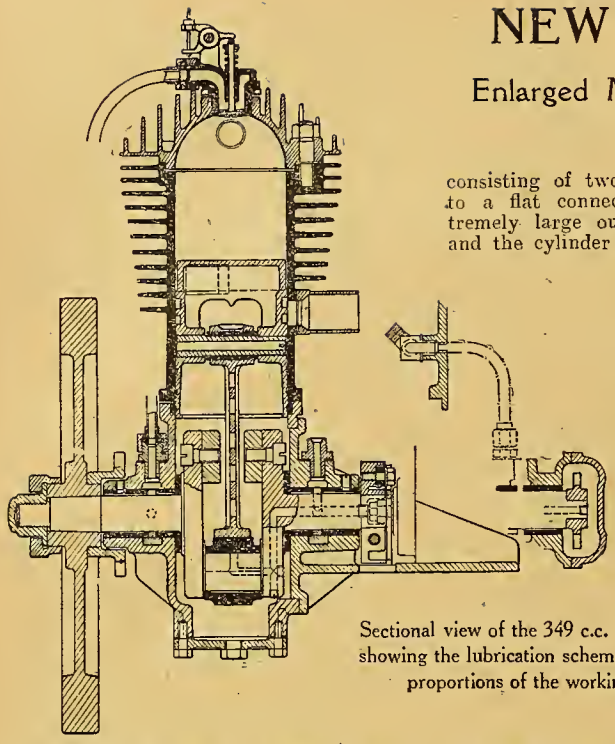
The Early Bird.

Considering the almost ideal conditions, it is surprising that so few motor cyclists go out for early morning runs. Before 8 a.m. roads are almost destitute of traffic, so that, given a sufficiently good surface, one may safely indulge in "more throttle" than later in the day.

Last week's floods caused considerable inconvenience to tourists and one does not wonder that the owner of the Raleigh outfit paused near Loughborough in order to take a photograph before taking the water.

NEW 350 c.c. TWO-STROKE.

Enlarged Model of the Union Engine. Detachable Head and Plain Bearings Throughout.



Sectional view of the 349 c.c. Union engine showing the lubrication scheme and massive proportions of the working parts.

THE Union engine has already made a good name for itself and is now well known in the two-stroke world.

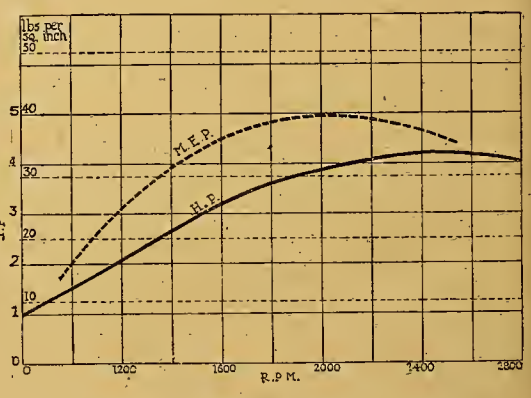
A later development has recently made its appearance and takes the form of a 350 c.c. three-port two-stroke engine of very robust construction. Having a bore and stroke of 75 × 79 mm. the engine is of 349 c.c. capacity; its salient features are a one-piece crankshaft and the employment of very large plain bearings, with lubrication leads direct to the cylinder, both main bearings and through the crankshaft to the big end.

The big end is of the marine type, consisting of two bronze castings bolted to a flat connecting rod base; an extremely large outside flywheel is fitted, and the cylinder has a separate cast iron head bolted to it.

In spite of the fact that only a few of these engines are yet on the road, they are by no means experimental, for in a modified form they have been operating pumping and lighting sets for a considerable period. We are able to reproduce a power curve of a standard engine which had been running for many months' continuous use previous to the test, though we are informed that a similar engine has maintained 9 b.h.p. at 3,500 r.p.m. for a period of 45 minutes. The main claims for this engine are that it is particularly cool in running and is very economical and flexible; its weight is only 50 lb.

On a machine which was tried by our representative, the engine proved to be capable of propelling the rider over any normal country with a top gear of 5½ to 1. It was possible to start on top gear quite comfortably and to climb a hill of 1 in 9 with the greatest of ease. A considerably higher gear might be used for solo purposes, the gear fitted being suitable for sidecar work, and with a higher gear a reasonably high road speed could have been attained in comfort. Lubrication appears to be perfectly satisfactory, and the engine two-stroked regularly over a wide range, fuel economy being a marked feature of the road running. The magneto drive may be arranged by chain in the normal fashion or may be direct from the crankshaft.

The address of the designer is Mr. E. H. Whaley, Coleridge Chambers, 177, Corporation Street, Birmingham.



M.e.p. and power curves of a 349 c.c. Union taken after a period of prolonged hard work.

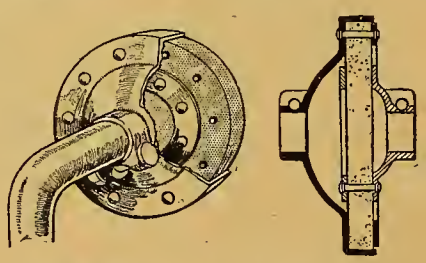
FLEXIBLE SIDECAR COUPLINGS.

A Device to Eliminate Frame Breakage or Contortion.

WITH the idea of providing a certain amount of flexibility between the motor cycle and sidecar and thus saving frame breakages, a modified form of the well-known Hardy flexible joint has been introduced under the name of the Hardy-Grew sidecar coupling.

This device takes the form of a fabric disc rivetted on one side to a large diameter cup, and on the other to a smaller but similar cup, while the unit can be attached to any one, or preferably to all, of the sidecar connections.

Considerable care is evidenced in the design, which is applicable to discs of any thickness to suit special circumstances, while the coupling can be fitted without any brazing. It is only necessary to cut a small length from any connecting tube, insert the coupling, and tighten up the clip bolts; these clip bolts pinch the coupling to the tube, and, as an additional safeguard, the bolts pass through the tube to the depth of 1-64th of an inch. In addition to saving frame breakages the Hardy-Grew coupling has another very marked effect, for when travelling over bad roads much of the shock which is usually transmitted to the cycle frame from the sidecar, is eliminated. This feature was particularly noticed under road test conditions, and the Triumph and sidecar on which the couplings were submitted for test was remarkably comfortable. As is the case with most flexible sidecar connections, the rider requires a short time to become accustomed to the slight "give" which permits the machine to lean to either side to a small extent, but it must be remembered that in the device under consideration this "give" is comparatively slight, being just sufficient to eliminate shocks without permitting the machine to roll to any very great extent. The manufacturers' address is E. J. Hardy and Co., 118, Queen Victoria Road, Coventry.



Part sectional and sectional views of the Hardy-Grew flexible sidecar coupling.

HUNDRED MILE RACE ON THE SANDS.

Neath M.C. "Welsh T.T." in adverse weather won by C. P. Wood (Scott Squirrel).

AFTER such glorious weather on the Bank Holiday Monday for the A.C.U. open event at Pendine (described last week), it was disappointing to the Neath club to find that the first Welsh T.T. would have to take place under unfavourable weather conditions.

Out of a very large entry few finished, and it is worthy of note that the little machines held their own for reliability.

The outstanding performance was that of the two Scotts, ridden by Clarence Wood and Ivor Thomas respectively. Wood, on a 532 c.c. Squirrel took the lead at the commencement, maintaining this position throughout.

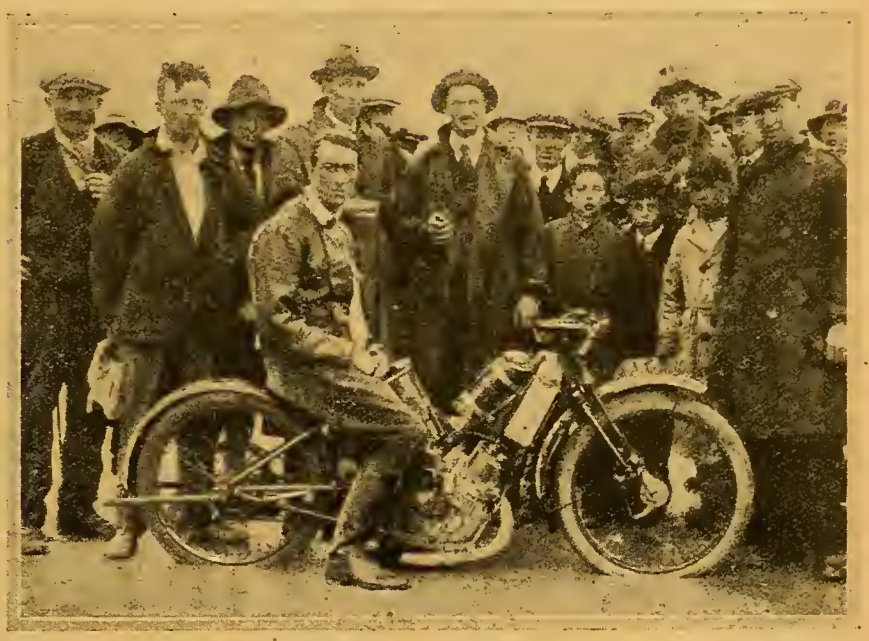
5-mile Laps.

Each lap measured 5 miles. In the first the Scott set the pace, Wood leading by 50 yards, followed by Hassall (490 Norton), Dance (499 Sunbeam), and Grinton (998 Harley-Davidson). Several competitors fell out even thus early, mostly due to plug and clutch trouble.

At 20 miles the positions were: (1) Wood, (2) Dance, and (3) Hassall, Grinton having previously run into the depot for replenishment.

Among the smaller (250 c.c. and 350 c.c.) machines, which had 50 miles to cover, Edwards, on his o.h.v. A.J.S., gained a remarkably fine lead, and was lapping most consistently. M. Isaac, Carmarthen (New Imperial), retired with eye trouble, but T. A. Jones (Ivy) still carried on, his little machine humming away in fine tune.

Owing to Dance's delay Wood became a lap in advance; Hassall had fallen behind with plug trouble. However, at 35 miles Wood stopped to refill, and Dance picked up lost time in a marvellous manner. On restarting, Wood literally screamed up the course, still maintaining the lead. At this time H. Davies (Brough Superior) completed his first lap, having been delayed with magneto trouble, and Edwards (A.J.S.), although he had stopped for a refill, led by a lap all the machines in his class.



Clarence Wood and his 532 c.c. Scott upon which he won the premier event.

Ivor Thomas (Scott) gradually crept into a position, running second to Dance in the 500 c.c. class. Wood completed half the distance in 53m. 10s., and led by four miles, while Grinton, who had apparently been having bad luck, now forged into third place. The positions at half way (50 miles) were: (1) Wood, (2) Dance, (3) Grinton.

At 65 miles Wood, still leading, visited his depot, being off the course for nearly four minutes. Simultaneously loud cheering greeted Edwards (A.J.S.); for he had completed his 50 miles, and thereby won the Junior Cup.

Winner of 250 c.c. Class.

The heavy downpour had now eased somewhat, and the positions were: (1) Wood, (2) Dance and Grinton (level), (3) Ivor Thomas, the latter receiving loud cheers from his club mates. Evans, on a 250 c.c. New Imperial, now finished, winning first position in the 250 c.c. class.

Hassall, dogged by plug trouble, returned to the fray. At 90 miles Dance, who was running second to Wood, had a remarkably quick fuel replenishment, and once more led the 500 c.c. class. However, "there's many a slip 'twixt cup and lip," and this was exemplified in Dance's case, for at 98 miles his magneto gave out and he was grateful to be towed in by Messrs. Pratt's representative.

Previous to Dance's misfortune Wood completed his run, doing the 100 miles in 108 mins., and it is remarkable that there was only a difference of 50 sec. in the times put up by him in the first and latter half of the race.

Owing to the retirement of Dance, Ivor Thomas, who had been lapping steadily and consistently throughout, now became the winner of the 500 c.c. class, with Hassall (o.h.v. Norton) second.

Full results:

100 MILES (UNLIMITED).
1st, C. P. Wood (532 Scott), 108m.

100 MILES (351 TO 500 C.C.).
1st, Ivor Thomas (Neath) (481 Scott Squirrel).
2nd, Hubert Hassall (490 Norton).
(No times taken.)

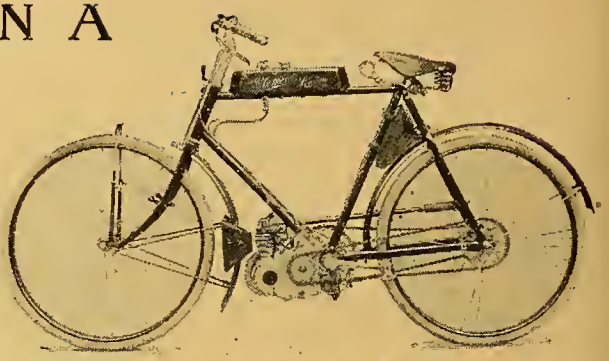
50 MILES (250 C.C.).
1st, Jack Evens (249 New Imperial).
2nd, J. N. Roberts (249 New Imperial).

50 MILES (251 TO 350 C.C.).
1st, W. Edwards (349 A.J.S.).
2nd T. A. Jones (349 Ivy).
3rd, L. F. West (349 Massey-Arran).

(Left to Right) T. A. Jones (349 c.c. Ivy) second in 350 c.c. class; J. N. Roberts (249 c.c. New Imperial) second in 250 c.c. class; and J. Evans (249 c.c. New Imperial) first in 250 c.c. class.

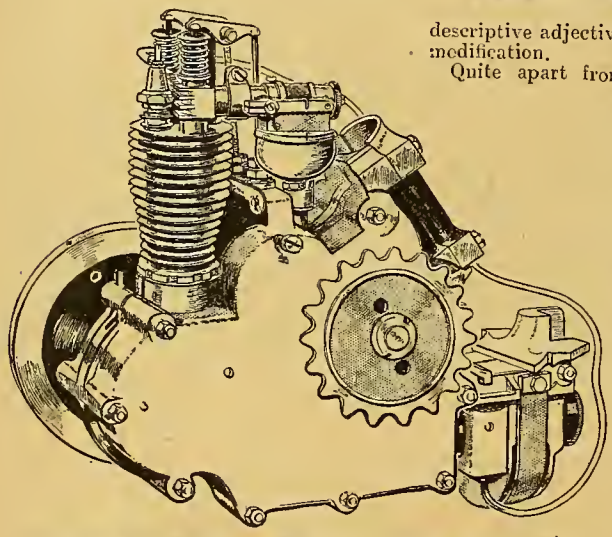
OVERHEAD VALVES ON A 43 c.c. ENGINE.

Cleverly Designed Miniature Power Unit for Attachment to Pedal Cycles.



Of German origin, this pedal cycle serves to show how the Clement unit is attached and also a wind scoop which is recommended as an aid to cooling.

WE are becoming accustomed nowadays to astonishing performances from tiny engines, but by "tiny" we generally limit ourselves to units between 150 c.c.—250 c.c. With the advent on the British market of the 43 c.c. Clement engine our scale of descriptive adjectives will have to undergo modification.



Careful detail design is apparent on the Clement 43 c.c. unit—probably the smallest i.c. road vehicle engine in the world.

Quite apart from its size—or lack of size—the Clement is quite a remarkable design, embodying as it does a steel cylinder, overhead valves, and an 8 to 1 reduction gear in the crankcase. Turned out of a solid steel bar, the cylinder is screwed into the crankcase, being held by a locking ring as on some aero engines. Ball bearings are employed for the main shaft and rollers almost everywhere else. There is an outside flywheel.

The carburetter has been designed specially for its task and consists of a float chamber and float enclosing a central jet, air being admitted through a gauze right above, and, if required, through an adjustable extra inlet; a butterfly valve throttle operates in the choke tube. The size of the sparking plug and the tension of the valve springs are to scale with the overall dimensions of the engine, and the bevel driven under-hung magneto is unobtrusive to the vanishing point.

For £17 the engine will be despatched to the customer by parcel post!

It is intended to be attached in front of the bottom bracket lug of an ordinary pedal cycle, and a rear sprocket and petrol tank have been evolved to fit. An oil-tank is unnecessary, the crankcase sump acting as a reservoir.

All the so-called minor details have received considerably more careful attention than one would expect on such a unit: for example, two petrol filters are provided.

The Belgian designer's London address is 26, Albany Street, N.W.1, but the manufacture, so far, has been carried out in Germany.

FRANCE'S SMALLEST ENGINE.

The 63 c.c. Micromoteur Auxiliary Motor with Friction Drive.

MOTOR assisted bicycles are becoming exceedingly popular in France, and every few weeks a new make is put on the market; numerous races and competitors are being organised for this class of machine.

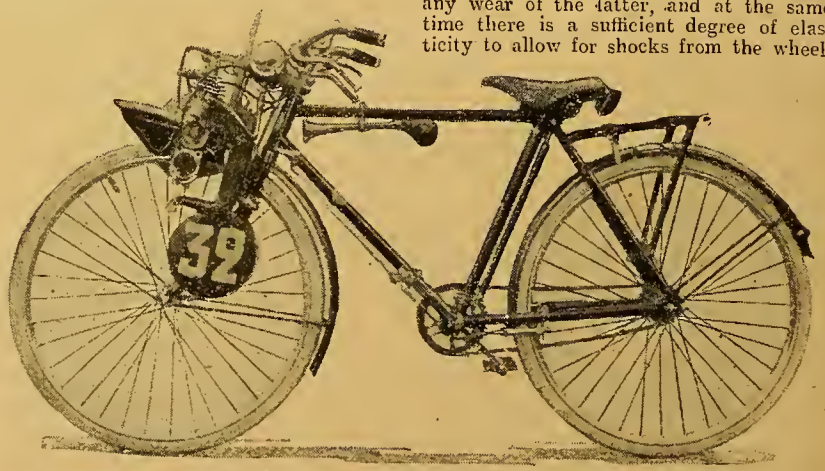
An interesting example recently introduced to the public is the Micromoteur, a single-cylinder two-stroke engine of 46×38 mm. bore and stroke, which embodies a piston displacement of only 63 c.c. This appears to be the smallest and lightest engine for a bicycle built in France, its weight with tank, but without fuel, being 16lb. The engine is said to develop ¾ h.p. at 3,500 revolutions.

Mechanical Features.

It has several distinctive mechanical features, among them being a die cast aluminium crank case with only one joint, ball bearings of unusual size for the main shaft, and an external (completely machined) steel flywheel. The little connecting rod is of bronze-aluminium alloy.

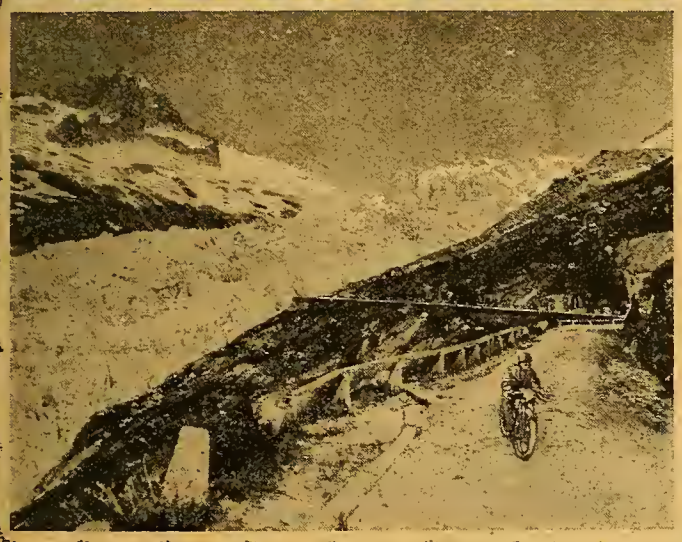
The Micromoteur is spring suspended to the steering tube and the front forks, and can be mounted on any bicycle. A cast-aluminium bracket clamped to the steering tube carries the petrol tank.

An original and patented type of friction drive to the front wheel is employed. The main shaft of the engine carries a drum having a series of cylinders around its periphery and parallel to its axis. The engine being pivoted, these cylinders bear on the tread of the tyre, frictional contact being maintained by means of an adjustable coil spring. There is excellent contact between the drum and the tyre, without any wear of the latter, and at the same time there is a sufficient degree of elasticity to allow for shocks from the wheel.



The diminutive size of the Micromoteur will be gathered from the illustration showing the unit mounted on a pedal cycle.

The International Six Days Trial



(Left) A river of ice, the Rhone Glacier from the Furka Road. (Right) As seen from the Grimsel Road, the magnificent Handeck Fall.

British Successes in Swiss International Event. Hills from Five to Fifty Miles Long.

ALTHOUGH only supported by 45 entries, the International Six Days Trial in Switzerland may be regarded as a success. The chief interest in the trial revolved around the three international teams competing for the trophy presented some years ago by the British Motor Cycle Manufacturers' Union, and held by the Swiss team, which won it in 1920 and held it in 1921.

The British team was composed of :—

G. S. Davison (249 Levis), winner of the 1922 Lightweight T.T. and the 250 c.c. French and Belgian Grand Prix Races;

A. Bennett (492 Sunbeam), winner of the 1922 Senior T.T. and the French Grand Prix of 1921 and 1922; and

F. W. Giles (800 A.J.S. sc.), representing the firm which has won the Junior T.T. so often and the Senior T.T. in 1921.

The Swiss team consisted of J. Morand (248 Condor), A. Robert (496 Motosacoche), and E. Gex (994 Motosacoche sc.), while a team from Sweden included B. Malinberg, G. Gothe, and P. Svanbeck, all mounted on Husqvarna motor cycles.

France not Officially Represented.

France did not nominate a team, but there were several French riders in the trial, in addition to two Hollanders and one Italian; while British riders constituted above 25 per cent. of the total entry.

As recorded in last week's issue of *The Motor Cycle*, the first day's run was from Geneva to Chaux de Fonds, a distance of 124 miles, when excellent roads were encountered along the shores of Lake Geneva. A 2,000 ft. climb up the Col de St. Cergue and the Col de Marchairez caused little trouble; in fact, all competitors arrived at the end of the first day's run without loss of a single mark, in spite of several secret checks.

The second day's run was considered to be the most difficult of any, the hills being both long and severe, and averaging three to four miles long, with surfaces of a "Colonial" nature.

Leaving Chaux de Fonds at 7 a.m., the competitors gently descended the pretty St. Imier valley, the centre of the clock-making industry. All day the competi-

The International Six Days Trial.—

tors journeyed through the great Jura range, the huge extent of which is not realised by those who are unacquainted with the district. After the Court control came the first "colonial section," the ascent of the Stierenberg, a narrow, long, and winding hill covered with stones and gulleys. Next followed a descent to the ancient town of Soleure, where Scintilla magnetos are made, and then the *pièce de résistance* of the whole trial—the Weissenstein Pass.

A Swiss Appiecross.

The observed climb was five miles long, rose some 2,500 ft., was over 4,000 ft. high, had a stony surface, and gradients of 1 in 6 in places. On the whole, the performances were better than last year, but it accounted for several failures. Here Robmann (Frera) had tyre trouble at the base, and C. Wilson (Quadrant) stopped with a choked jet. Viewed from the worst hairpin, the performances were distinctly interesting. Jex (Motosacoche sc.) came up fast, but his passenger was not normally seated; Pélissier (994 Motosacoche) only just managed to get round by slipping his clutch, Volzenlogel (346 Condor) foot-slogged, but many riders made quite clean climbs on just putting down a leg to balance themselves on the turn. Pictet (248 Condor) made an excellent ascent among the lightweights, Egger (o.h.v. Triumph) just succeeded, Sidney (348 Raleigh) was baulked and forced inside the curve, while Clarke (Quadrant) fell, and this incident appeared to be the beginning of the trouble which ultimately proved to be his undoing. Particularly good ascents were made by Eric Williams (A.J.S.), who remembered every yard of the course from last year, Malmberg (494 Husqvarna), and Giles (800 A.J.S. sc.). Giles, by the way, left the route the day before, which was not to be wondered at, as the arrowing, in parts, was none too good; he had

Francois Franconi (496 c.c Motosacoche) arriving at Vallorbe, the lunch control on the first day.

to make up time, and partially seized his engine in so doing. Göthe (494 Husqvarna) did well, while Wilson (Quadrant), Gibson (Raleigh), Davison (Levis), and Robmann (Frera) made excellent ascents. André Pictet, the driver of the only cyclecar, the 1098 c.c. Hinstin, came up well, but carried his passenger on the tail of the vehicle.

Difficulties Down Hill.

The difficulties of the Weissenstein are, however, not only as regards its up grade, but on the down grade also, which is not only steep, but is rough, winding, and traversed by gullies, and it was on one of these that Gibson took a nasty toss; his machine fell on him, and rather badly damaged his ankle, but he pluckily continued, and finished the journey, hoping to go on again the next day. After his tumble Bertschi (Triumph) came to his assistance. Hamer, the Dutch rider of a 736 c.c. Douglas, managed the Weissenstein well enough, but lost time through chain trouble and a loose hub.

Extremely Undulating.

However, the Weissenstein was not the end of the morning's difficulties, as there followed the ascents of La Scheulte and the Passwang, amounting, in all, to six crossings from one valley to another in the Jura range.

Lunch was served at Laufen, and thereafter the road, though easier, was quite stiff enough. It rose and fell among the valleys of the Jura, passing wooded hills, threading its way through gorges, and giving glimpses of old feudal

G. Fuhrer (994 c.c. Motosacoche) climbing the zig-zag up to the Vue des Alpes.

The International Six Days Trial.—

castles perched on inaccessible rocks, ancient strongholds of a bygone age. The last few miles into Zurich were over very badly worn roads. Used as they are to stiff country in their mother-land, the English riders, one and all, agreed that the day's run was really severe. In the morning it was evident that the mileage to certain of the checks was inaccurately given in the programme, and this matter received the attention of the officials. Among those who lost marks may be mentioned Lambert (Viratelle) 24 marks, who made a good climb of the Weissenstein, and on being told he had lost marks, said the officials were inexact; Demont (244 New Imperial), 13 marks; Robmann (Frera), 51 marks; V. Pictet (248 Condor), 48 marks, and Hamer (736 Douglas), 31 marks.

Swiss Team Loses Marks.

Robert (Motosacoche), of the Swiss team, was caught napping at a secret control, while Svanbeck (Husqvarna) retired after damage to his gear box through striking a boulder. Thus the British team was leading at the end of the second day.

THIRD DAY.—ZURICH TO LUGANO—181 MILES.

A long day's run was before the competitors as they left the beautiful town of Zurich at 5.30 a.m. on Saturday. The morning was overcast and cool, but the day promised to be fine. Gibson pluckily started, though he could not put his foot to the ground. As to Clarke (Quadrant), who fell five times on the previous day, which was the most severe of the trial, his various troubles delayed him so much that he had to retire.

Thursday's run was the first to bring the competitors among the High Alps, entailing the climbing of very long ascents, and passing through the most beautiful scenery Europe can produce.

Leaving Zurich, the competitors were taken over a small pass into the country south of the lake.

Types of Control.

The first control of importance was at Pfäffikon. Here it must be mentioned that the trial teemed with controls, which are of four kinds: *contrôles de passage*, controls at which the competitors do not stop, but which are there to ensure the correct route being taken; *contrôle fixe*, a control where the competitors stop and sign; *contrôle fixe et ravitaillement*, where competitors sign and fill up; and *contrôles secrets*, the meaning of which is obvious. After the Pfäffikon control the competitors very gradually ascended along the Linth valley, between two chains of high mountains, on which there was far more snow than last year, and proceeded to Linthal village, which marks the beginning of the Klausen Pass.

Talking to the hotel keeper about the pass, he said: "Do you see that mountain?" pointing to a cone-shaped peak which dominated the village. "Well, you will have to climb as high as that." It did not seem possible; but he was right.

Mounting *en lacets*—by zig-zags—with a fairly loose surface at every corner, the climb went up and up, then suddenly, just as the trees grew thinner and the

F. Egger, a French Triumph rider, emerging from a leafy tunnel.

country assumed that grand air of desolation which exists just below the snow line, a smiling valley, at the end of which was Klausen village, dominated by beautiful snow mountains, was reached.

Far down in the valley could be heard the distant echo of the competitors' exhausts, doubtless disturbing the chamois in their lofty haunts, for these nimble and graceful beasts still dwell amid the high rocks. Despite the altitude attained—6,000 feet—the height of the summit is 6,344 feet—the gradients are not worse than 1 in 10, and the corners though loose, are quite flat.

The course of the Cassarate Brè Hill Climb—a rise of 1,649 feet in 5 miles—near Lugano, referred to on the next page.

Engines make Light of Passes.

All the machines came swinging round the zig-zags, and opening up thereafter sang up the pass as though their engines were as fresh as their drivers. Bennett (Sunbeam) soared up comfortably, while even Davison's little Levis did much on top gear and never needed a lower ratio than second; Clifford Wilson on the Quadrant, the Swiss-ridden New Imperials, the Swedish Husqvarnas, the little Condors, Dutchman Hamer's Douglas, the French Viratelle, the Motosacoche, and the Italian Frera all came up, making light of this lofty 14½-miles' long hill. Giles (A.J.S. sc.) and both Williams and Harris (349 A.J.S.) looked perfectly happy.

Nineteen miles an hour average in the Alps allowed little time for dawdling, and *à propos* of this limit, it must be mentioned that for the ordinary motorist the pass is controlled, and the legal average of 11 m.p.h. between the control posts must not be exceeded.

At the summit the competitors had to pass through two walls of snow, which had been cut to clear the road.

A magnificent descent, past gorgeous snow mountains, glaciers, and waterfalls, led to Altdorf, the end of the morning's run, and after lunch came the thirty miles' climb up the St. Gothard, reaching an altitude of 6,872 ft.

Storm on the St. Gothard.

Just as the competitors reached the summit a cloud suddenly formed on a mountain overlooking the Hospice and the two wild lakes near by. Others followed, and in a few minutes the sky was covered and rain fell.

L. Divorne (248 c.c. Condor) and L. Bonvin (994 c.c. Motosacoche) checking in at Vallorbe.

At Vallorbe—as at any English village—the competitors attracted the usual admiring crowd of juveniles.

Down, down went the riders, winding corkscrew fashion, down the sheer side of the mountain, slithering round the disgracefully loose corners, which rapidly became greasy with the torrential rain.

On the fourth "storey" down a Motosacoche rider fell in the loose surface and twisted his handlebars. Others passed looking miserable, and it seemed as if many marks would be lost before Lugano was reached, but it was not to be, as after Airolo, where the railway emerges 3,000 ft. below the summit, the rain ceased, and thereafter followed an easy run to Biasca, where a secret check was sprung upon the competitors. Here Eric Williams (A.J.S.), who had been riding with Sidney (Raleigh), who travelled slowly because of the grease, found himself well behind time and had to hurry to catch up.

After Bellinzona, one pretty little climb *en lacets* up the Monte Cenere was made, and the competitors then had an easy run to beautiful Lugano.

The Toll of the Third Day.

Few marks were lost on this, the third day, and none of the British team had any trouble. Führer (Motosacoche) had tyre trouble after Bianca; Lamberts-Hurrelbrinck, the Dutch rider of the Saroléa, lost much time owing to trying to trace a noise made by his chain cover, which he thought indicated something serious.

Other unfortunates were Egger (Triumph), 2 marks; Wilson (Quadrant), 1 mark; Bertsch (Triumph), 2 marks; and Führer (Motosacoche), 41. At the end of the third day the Swiss team had lost 2 marks, and the English 6, but a protest has been raised by riders of several nationalities who were said to have lost marks at the Hochwald secret control on Friday, since their speedometers show that the distances on the route laid were inaccurate.

A Day of Rest at Lugano.

Jour de repos (Day of Rest).—As such was August 6th described in the programme. It began well. Late on Saturday night it was announced that the Monte Bré hill-climb, organised by the Unione Sportiva Ceresio, would begin at 7 a.m., and all the Englishmen, keen as they are, vowed they would rest in their beds. Mr. Ebblewhite declared nothing would persuade him to be astir so early, but as he was official timekeeper he had to go. As to the others—well, at 4.30 a.m. motor cycles began to flit along the road by the lake, trams ground their wheels as they turned the corner by the hotel, at 5 a steamer whistled, and at 5.15 it seemed better to get up and dress than lie abed and listen to the noise.

Monte Bré is a wonderful hill; in fact, it is not a hill at all but one of those conical mountains rising sheer from the lake which stand as sentinels watching over the town of Lugano. The road which winds up its flank is in good order, is 5 miles in length, and rises to 1,649 feet above the level of the lake—not sea level, mark you! as that of the lake is already nearly 1,000 feet. It has ten hairpin corners and finishes just short of the mountain village of Bré. The following are the results of the climb:—

CLASS B. 350 c.c.—Rossi (Motosacoche), 9m. 18s. (32 m.p.h.); Gnesa (Garelli), 9m. 32⅕s.; Zaccheo (A.J.S.), 11m. 12s.

CLASS C. 500 c.c.—*Rossi (Motosacoche), 8m. 22⅗s. (35.5 m.p.h.); Bernasconi (Frera), 9m. 1s.; Dattaglia (Triumph), 9m. 6⅕s.

CLASS D. 750 c.c.—Ghezzi (Motosacoche), 9m. 36⅗s. (31 m.p.h.); Bernasconi (Triumph), 10m. 15s.; Urio (Indian), 10m. 34⅖s.

CLASS E. 1,000 c.c.—Visioli (Harley-Davidson), 8m. 47⅖s. (35 m.p.h.); Leoni (Indian), 9m. 27s.; Mattavelli (Indian), 9m. 39s.

CLASS G. 1,000 c.c. SIDECARS.—Widmer (Indian sc.), 10m. 38⅗s. (30.5 m.p.h.); Acerboni (Frera), 10m. 50s.; Perwangher (Sunbeam), 10m. 53⅗s.

*Rossi broke the record for the hill.

FOURTH DAY.—LUGANO TO BERNE—183 MILES.

An early start was made on Monday, the first man leaving at 6 a.m. in pouring rain.

It thundered and lightened as the competitors prepared for another arduous run, and before starting Giles (A.J.S. sc.) had to change a tube. Rain continued as far as Bellinzona and then ceased, but clouds obscured the mountain tops and the weather looked more than threatening. Actually from the bottom of Monte Cenera, the hill out of Lugano, to the top of the St. Gothard is 52 miles of steady up grade, with only one interruption, and there are as many hairpin turns as there are miles of hill. The motor cycles took the famous pass on its most difficult side with the greatest ease, notwithstanding the fact that the loose corners had been churned into greasy mud.

Hugh Gibson (349 c.c. Raleigh) going well on one of the long engine-trying climbs—the Vue des Alpes.

The International Six Days Trial.—

Near the summit the men were riding in the clouds and rain, which happily cleared off as they descended.

Despeux (292 New Imperial) was in trouble with his petrol tank, and at the control by the side of the lake started to mend it with soap. Dunand (499 Sunbeam) punctured on the St. Gothard. Down from the summit the weather became clearer and the temperature warmer.

On entering Altdorf the competitors had to turn sharply to the right to reach the control, and only those with a good memory reached their destination without trouble. Bossetti (Raleigh) wandered all over the town and protested in language (French) more forcible than polite. It was pointed out to him that it did not matter as he had arrived punctually, but even that did not pacify him.

Indifferent Route Marking.

The marking was very poor at times during the trial, and it is a wonder how the Englishmen found their way. This was especially noticeable in Lucerne.

After lunch at Altdorf the route lay along the famous Axenstrasse, which flanks the Lake of Lucerne, through the unique windowed tunnel hewn out of the solid rock through which wonderful views are obtained. The road was excellent but rather narrow, climbing gently at times; it led to Lucerne, after which place followed an easy, uneventful, but somewhat long run to Berne, the capital of Switzerland.

The principal features of the journey were the richness of the fertile country and the beauty of the numerous chalets with their windows and balconies decked with flowers. Rain fell towards the end of the run and became really heavy as the men arrived.

Determination.

Everyone, of all the nationalities, was filled with admiration at the pluck of Hugh Gibson (349 Raleigh). A day in bed at Lugano while the others enjoyed themselves had done him good, but the injury he had received on Friday would have caused the average individual to lie up for at least ten days. Nevertheless he started from Lugano on Monday morning and had no trouble until within about 20 miles of his destination, when an approaching car forced him on to a loose patch of road, causing him to fall, but fortunately without damaging his machine or bringing further injury to his ankle.

In Berne itself the excellently organised control was in the principal square, which was of great beauty and flanked by noble buildings. Police kept it clear of people, and only officials and competitors were allowed in its sacred precincts.

Thousands of inhabitants watched the final stage of the day's run, despite the heavy rain that was falling.

Bennett (Sunbeam) reported an excellent trip, but bewailed the fact that he had lost a spare cover and tube some miles back. He, like others of the English riders, had suffered punctures, and on Saturday had had three and saved another by pulling out a nail just in time.

Sutter (Harley-Davidson) pulled up suddenly to avoid a spectator, skidded and fell, while Harris (A.J.S.) gave a similar form of entertainment. He was approaching the control quite sedately when he suddenly saw fit to accelerate at the very moment when another competitor crossed his path. Result—an equally rapid tumble within a few yards of the checker. Fuhrer (994 Motosacoche), who was a member of the Berne Motor Cycle Club, received a bouquet of flowers on his arrival, and his fellow members were similarly honoured. Lamberts-Hurrelbrinck, the Dutch rider of a Saroléa which is five years old, reported a good run; but he has learned that riding among the High Alps is different to the plains of the Netherlands. Wilson (Quadrant) and Sidney (Raleigh) came in wet but happy, and Davison (Levis) arrived in as cheery a mood as ever.

So far as the day's results are concerned Bertschi (Triumph) retired, and marks were lost as follows: Hamer (736 Douglas), 41 marks. He was first penalised 26 for arriving late at a control, and then started to make up time, overdid it, and came in too early at the next, losing a further 15 marks. Dunand (499 Sunbeam) was mulcted 10 marks for arriving late.

FIFTH DAY'S RUN: BERNE TO CHATEAU D'OEX (192 MILES).

After the night's rain the roads were dustless as the competitors struck a southerly course from the Swiss capital towards Interlaken. As it was a market day, bicycles and farm carts thronged the route to Berne, but the road surface was good.

On the Klausen Pass—a long, gruelling ascent, which tests to the full the modern high-compression air-cooled engine.

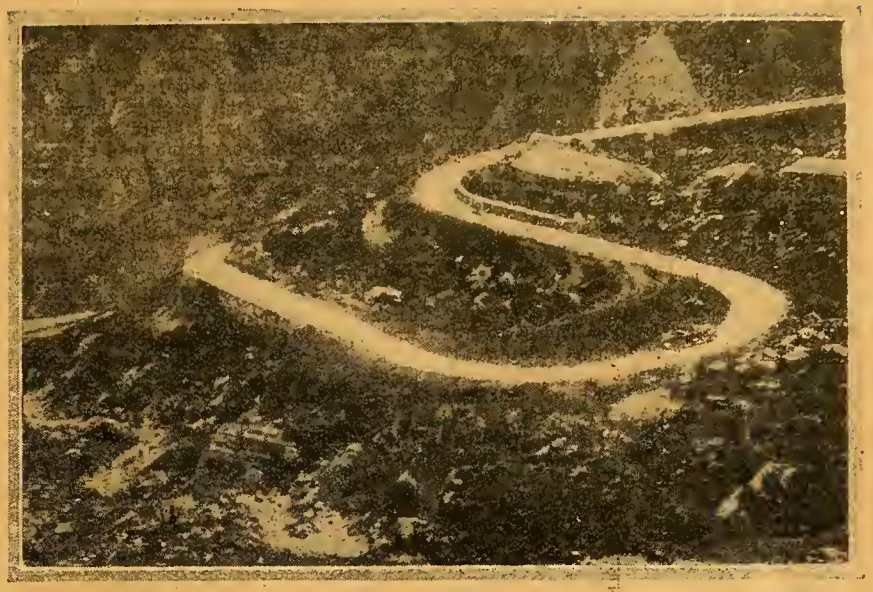
The International Six Days Trial.—

It was a journey of superb beauty. First the men skirted the beautiful lake of Thun, then passed through tourist-favoured Interlaken, with its famous view of the Jungfrau, then along the shores of the equally lovely lake of Brienz to the *pièce de résistance* of the long day's journey—the ascent of the Grimsel pass. This was through the grandest scenery, but though the day was fine clouds obscured the summits of the highest mountains, spoiling the distant view.

Checked at the Revolver's Point.

Only slightly inferior to the St. Gothard in altitude, the Grimsel, though it has a better surface, is quite as steep and was far more difficult to climb; on the St. Gothard the average speed was only 12 m.p.h., while that for the Grimsel was 19 m.p.h. and the sidecar machines had to work hard to maintain it. Motor vehicles are controlled on all the principal Swiss Alpine passes; a speed limit is set which must not be exceeded, and a toll is paid and a pass given at the foot which must be surrendered at the summit. Now the Swiss Motor Cycle Union had definitely arranged with the cantons concerned that these formalities should be waived during the trial. Notwithstanding a Swiss competitor, Souvairan (994 Motosacoche sc.), was held up at the inn near the summit by a gendarme who pointed a revolver at him. M. Delessert, clerk of the course, fortunately arrived in time, but could make no headway with the gendarme. He then saw the proprietor of the hotel, a former deputy, pointed out that this was not a courteous way to treat visitors of various nationalities, and persuaded him to telephone the cantonal government, with the result that humble apologies were offered. Souvairan lost 25 minutes, which was of course allowed him.

From the two pretty lakes adjacent to the hotel surrounded by grand snow-covered mountains the road ascended abruptly in zigzags to the summit, where the riders were very near the clouds. Then a fresh view of wonderful splendour was revealed, but was not so fine as last year owing to the weather conditions. To the left the Rhône glacier could be seen, from which trickled the tiny stream which feeds Geneva's great lake and becomes one of the proudest rivers in France. Steep zigzags, which had to be taken without loss of time, led the riders to the check at Gletsch at the bottom of the valley. The road, which was not so good as that over the Grimsel pass, and as narrow as an English lane, led down towards the Lake of Geneva, ending in abrupt and very sharp hairpins.



How the road turns and twists up the mountain side on the Klausen Pass.

Only one British Retirement.

All the men appeared to be travelling well, including Bennett (Sunbeam), Harris (A.J.S.), Giles (A.J.S. sc.), Wilson (Quadrant) and Davison (Levis). So far the English team were intact, but one English rider had retired. Gibson (Raleigh) was still pluckily continuing, but the failure of an unpuncturable tube and its refusal to retain a patch soon after the start added to his woes.

Infringement of Rules.

Brigue, the luncheon stop, is a picturesque and quaint place of some importance, as it marks the beginning of the Simplon pass and the entrance to the famous tunnel. An incident in the luncheon control led to the withdrawal of a competitor from the trial. Rohmann (Frera) was observed to change his jet, which of course was strictly against the rules. The matter was at once reported to the "jury," *i.e.* the Trials Committee, and he was immediately disqualified.

After Brigue a magnificent and very fast road lined with poplars and reminiscent of the great national roads of France was traversed for many miles. The weather was now intensely hot, and one of the features of the day's run was the extraordinary changes of temperature, first the chill of the early morning, the moderate temperature of the valleys, the cold on the summit of the pass, and then the tropical heat of the afternoon, followed later by a quite chilly climb over the Col des Mosses and an arrival at Château d'Oex, just as a thunderstorm heralded the approach of torrential rain. The ascent of the Col de Mosses was of no great severity, and the road surface was excellent. It was in no way inferior as to scenery to the others, and some glorious views of the Diablerets were obtained. Château d'Oex, where the night was spent, was the only mountain resort on the trial where the competitors stayed.

The Day's Toll.

Demont (244 New Imperial) retired owing to gear trouble, while Clerc (248 Condor) lost 51 minutes on the Grimsel Pass owing to a similar defect, the Hinstin cycle car was 4 minutes late, and Malmberg (494 Husqvarna) lost 2 minutes.

F. W. Giles (800 c.c. A.J.S. sidecar)—The passenger member of the British team—on the long ascent of the Klausen Pass.

The International Six Days Trial.—

SIXTH DAY: CHATEAU D'OEX TO GENEVA (176 MILES).

After the thunderstorm on the previous evening the clouds hung low on the mountains, and all the high peaks were blotted out as the competitors left Château d'Oex and dropped down the mountainside into the pretty Sarine Valley as far as Broc. Meyer (994 Motosacoche) had a nasty tumble at the start, and hurt his nose badly. After leaving the stopping place for the night the competitors climbed the Col du Brüch, the same observed hill as was used last year. First to arrive was Clerc (Condor), whose engine came to a standstill near the last bend, and he arrived pushing and much exhausted. Examination proved that a ball bearing had gone in his gear box, and he was compelled to retire. Borsetti (348 Raleigh) stopped owing to the carburetter drying up, and nearly baulked Pittet (Condor) as he did so. Eric Williams (348 A.J.S.) came up in splendid style, as did Gibson (348 Raleigh), while Giles and Bennett climbed in quick succession, the former making a comfortable ascent, while the latter travelled fast, riding beautifully and keeping as cool and collected as ever. Pélissier (Motosacoche) made a fast climb, and cut out at the corners. Hamer (736 Douglas) sat upright in the saddle and took the hill at touring speed. Sidney (Raleigh) and Wilson (Quadrant) both made good ascents. Robmann (Frera), whose disqualification was announced on the previous day, was allowed to start. He climbed the hill in excellent form. Gex (Motosacoche sc.), of the Swiss team, made a splendid ascent.

Many Lose Marks.

Meyer, whose accident is previously mentioned, arrived very late at the foot of the hill, and retired. The hill had to be taken as fast as possible, and any man who was more than 10 sec. behind the fastest in his class was penalised. Marks lost on the hill stand as follows:—Dinkel (248 Condor) and Morand (742 Condor) 0, Pittet (248 Condor) 15, Volzenlogel (346 Condor) 2, Lamberts-Hurrelbrinck (498 Saroléa) 12, Bennett (492 Sunbeam) 0, Robmann (999 Frera) 2, Davison (249 Levis) 0, Gex (994 Motosacoche) 2, Franconi (496 Motosacoche) 2, Souvairan (994 Motosacoche sc.) 4, Bouvin (994 Motosacoche) 1, Pélissier (994 Motosacoche) 0, Robert (496 Motosacoche) 6, Rothenbach (989 Harley-Davidson sc.) 0, Sutter (989 Harley-Davidson) 0, Leu (989 Harley-Davidson) 2, Malmberg (494 Husqvarna) 9, Goethe (494 Husqvarna), 10, Lambert (696 Viratelle) 3, Senning (999 Husqvarna) 1, Egger (499 Triumph) 4, Gibson (348 Raleigh) 4, Borsetti (348 Raleigh) 4, Sidney (348 Raleigh) 7, Desfeux (292 New Imperial) 17, Fuhrer (994 Motosacoche) 11, Clifford Wilson (653 Quadrant) 5, Giles (800 A.J.S. sc.) 4, Eric Williams (348 A.J.S.) 0, Harris (348 A.J.S.) 2, Hamer (736 Douglas) 15, and Dunand (499 Sunbeam) 4.

After riding the hill, the competitors descended a zigzag road to the Simme Valley, passing through gorgeous country, over which the weather was now attempting to clear, ascended the steep Col du Pillon, and returned to Aigh after having made a complete circle of mountain roads, reaching the Rhône Valley by the road ascended the day before. After Montreux, the luncheon stop, a detour was made into the high country dominating the Lake of Geneva. The riders then descended to the excellent road along the lake almost into Geneva, when a turn to the right was taken and a steep hill ascended.

Thereafter the road—excellently marked—wound in and out and round about after the manner of an A.C.U. one-day trials course, brought the competitors to the flat road over which the speed test was held in the reverse direction to last year, and on through more winding lanes to the Donzelle, the worst gradient in the trial.

Excellent Organisation.

The organisation of the first was excellent; the spectators were roped off from the course, and the surface was in fine condition. Only one incident marred the test, and that was the accident to Bouvin (994 Motosacoche), who fell and retired.

After the speed trial came the hill climb. West of Geneva lies a plain, but nevertheless it was possible to find there a really sporting little hill, quite short but with a gradient of about 1 in 4, and with a fair surface, for all the world like an English by-road. There were only two failures, Desfeux (New Imperial) and Jean (Condor). The latter, first stopped owing to his gear lever slipping out of engagement, made a second attempt, and ran to the top, arriving exhausted. All the English team climbed well, but Giles (A.J.S. sc.) swerved badly, as his back tyre was flat. There was a level-crossing at the bottom of the hill which could not be rushed, as it was approached after a right-hand bend, and naturally the level-crossing caused several delays. Crowds of people watched both the speed trial and the hill-climb. Six miles only separated the Donzelle from Geneva.

The Last Stage.

On arriving at Geneva last Thursday night the competitors' machines were stored in a school some little distance behind the Bâtiment Electoral, and there the officials toiled all day over the results, ably guided by MM. Delessert, Revilliod, Merle, Loughborough, and Ebblewhite. Then the machines were examined as to their condition, and finally the results were announced at a banquet held in the Kursaal.

M. Jules Neher, President of the Swiss Motor Cycle Union, occupied the chair. M. Neher had been the life and soul of the Trial, but had largely worked in the background. A delightful welcome was accorded to riders and officials by M. Guinand, who paid a handsome tribute to the former for their pluck and endurance, and the fact that certain had continued despite injury through accident. He was delighted to see two magistrates of the Canton and Town of Geneva at the Donzelle hill-climb; they were exceedingly pleased with the excellent arrangements there.

M. Neher made three excellent speeches, in English, French, and Swiss-German patois, and thanked both riders and officials. Other speeches were made by Col. Brereton, C.B.E., and M. Philippe, of the French Sporting Press. The prizes were then distributed by Mme. Neher, supported by MM. Delessert and Conchon.

OFFICIAL RESULTS.

Winners of International Trophy, presented by the British Motor Cycle Manufacturers' Union, by one mark.

II. THE BRITISH TEAM.

G. S. Davison (249 Levis)	...	1,000
F. W. Giles (800 A.J.S. sc.)	...	996
A. Bennett (492 Sunbeam)	...	993
		2,989

III. THE SWEDISH TEAM.

G. Goethe (494 Husqvarna)	...	990
B. Malmberg (494 Husqvarna)	...	983
P. Svanbeck (995 Husqvarna sc.)		—
		1,973

TRADE TEAM RESULTS.

(1) A.J.S. (Giles, Williams, Harris), 2,994, or 4 more than the winning international team.
(2) Harley-Davidson (Rothenbach, Sutter, Leu), 2,993.
(3) Motosacoche II. (Souvairan, Franconi, Pélissier), 2,975.

CLUB TEAM RESULTS.

(1) Zurich M.C.C.: Dinkel, Rothenbach, Leu, 2,995 (Touring Club Suisse Cup).

(2) Worcester and District M.C.C.: Williams, Giles, and Harris, 2,994 (Lumina Cup).

(3) Motosacoche Club: Souvairan, Franconi, Pélissier, 2,975 (Maxim Cup).

Prize for the best performance of a foreign machine, offered by the Federal Police:— G. S. Davison (Levis).

Prize for the best performance of a Swiss machine:—H Dinkel (248 Condor), J. Morand (742 Condor). As Dinkel's mount had the smaller engine he was awarded the prize presented by the Swiss Automobile Club.

SPECIAL GOLD MEDALS.—H. Dinkel (248 Condor), G. S. Davison (249 Levis), Eric Williams (348 A.J.S.), J. Morand (742 Condor), A. Rothenbach (987 Harley-Davidson sc.).

GOLD MEDALS.—V. Pittet (248 Condor), H. F. Harris (348 A.J.S.), H. Gibson (348 Raleigh), E. Borsetti (348 Raleigh), — Jean (346 Condor), E. Desfeux (292 New Imperial), E. Sidney (348 Raleigh), F. Franconi (496 Motosacoche), A. Bennett (492 Sunbeam), A. Robert (496 Motosacoche), F. Egger (499 Triumph), G. Goethe (494 Husqvarna), B. Malmberg (494 Husqvarna), A. Dunand (499 Sunbeam), E. O. Sutter (987 Harley-Davidson), A. Leu (987 Harley-Davidson), L. Pélissier (994 Motosacoche), C. Laeser (965 New Imperial), D. Senning (499 Husqvarna), E. Gex (994 Motosacoche sc.), A. Souvairan (994 Motosacoche sc.), F. W. Giles (800 A.J.S. sc.).

SILVER MEDALS.—P. Lamberts-Hurrelbrinck (498 Sarolea), G. L. Hamer (736 Douglas), G. Fuhrer (994 Motosacoche), J. Robmann (999 Frera).

FLYING KILOMETRE SPEED TRIAL RESULTS.

CLASS A.—G. S. Davison (249 Levis), 44.56 m.p.h.; V. Pittet (248 Condor), 41.57 m.p.h.; H. Dinkel (248 Condor), 39.10 m.p.h.

CLASS B.—Eric Williams (348 A.J.S.), 52.02 m.p.h.; E. Borsetti (348 Raleigh), 50.83 m.p.h.; H. F. Harris (348 A.J.S.), 50.15 m.p.h.

CLASS C.—F. Franconi (496 Motosacoche), 58.86 m.p.h.; A. Bennett (492 Sunbeam), 58.56 m.p.h.; A. Dunand (499 Sunbeam), 54.42 m.p.h.

CLASS D.—J. Morand (742 Condor), 55.37 m.p.h.; O. Lambert (696 Viratelle), 48.63 m.p.h.; C. Wilson (653 Quadrant), 47.59 m.p.h.

CLASS E.—O. Sutter (989 Harley-Davidson), 66.8 m.p.h.; L. Pélissier (994 Motosacoche), 65.79 m.p.h.; C. Laeser (965 New Imperial), 59.80 m.p.h.

CLASS G (SIDECARS).—A. Rothenbach (989 Harley-Davidson sc.), 54.03 m.p.h.; E. Gex (994 Motosacoche sc.), 53 m.p.h.; A. Souvairan (994 Motosacoche sc.), 49.05 m.p.h.

WELSH RAIN ON WELSH HILLS.

Alt-y-Bady and Conquering Hero twice Encountered in North Wales Centre Trial. Local Riders' Outstanding Performances.

SIXTY entries were received for the North Wales Centre A.C.U. Open Trial, which was held last Saturday, and of the sixty all but four were solo riders. This fact indicated to some extent the general expectation of what the day would hold for the competitors.

There were only one or two defaulters on the starting-line at Denbigh, although rain was falling in that direct and peculiarly steady, coming-down-all-day manner so familiar to those who dwell amidst the mountainous places. Unfortunately, amongst the non-starters were two of the three ladies who had entered the event.

Two Short Circuits.

Comparatively, the course was a short one, actually just under 56 miles, but it included miles of "colonial" going, as well as the famous (or infamous) Alt-y-Bady, and the hill known as Conquering Hero between Rhewl (Llangollen) and Bryn Eglwys; this course, which was excellently arrowed, was covered twice.

First man away was J. W. Wills (547 Powell), a rider who knows the district and who put his knowledge to advantage, riding fast and well and subsequently qualifying for two of the principal awards.

The route followed the main road to Ruthin, and then went on to Llanfair Dyffryn Clwyd—usually written Llanfair D.C. to help the non-linguistic English. Shortly after passing this hamlet, the competitors were switched off down a narrow lane, and after several bends were precipitated into a narrow, leafy path which formed also the bed of a shallow stream.

Probably because everyone was already soaked by the drenching rain, the watercourse was treated with great contempt, not a single failure being recorded.

At Pentrecelyn some more colonial going was encountered, then for a short distance the road towards Llangollen was followed, the sheer descent to that holiday-thronged town, *viâ* Pentredwr, being taken instead of the more gradual but scenically wonderful Horse Shoe Pass.

The "Bady" in Rain.

Immediately outside Llangollen Alt-y-Bady was attacked, and although the rain had washed the surface clear of slime the wet, rounded rocks were tricky.

The hill, in fact, claimed twenty-one failures on the first circuit, but before mentioning these special attention must be called to the showing of J. W. Wills (547 Powell), C. M. Jones (347 Diamond B. and S.), G. F. Burns (499 Sunbeam), and R. O. Hughes (349 Raleigh). The latter's performance was specially wonderful because of his physical handicap. Hughes has only one arm, and "holds" the left grip by rubber bands attached to a steel "book."

Of the other competitors, A. Colcombe (596 Indian) was baulked, but climbed well on being allowed a restart. H. F. S. Morgan (1098 Morgan) made a fine ascent.

On Conquering Hero—second in severity to Alt-y-Bady. H. T. Williams (633 c.c. Norton sidecar).

G. W. H. Goodall, on a similar machine, failed through the carburetter drying up. G. W. Shepherd (986 L.S.D.) broke a valve, and L. A. Clowes (688 Coventry Victor) twice skidded completely round. Miss Cottle (550 Triumph) climbed well. Bert Kershaw (249 New Imperial) most unusually, ran into the bank.

O. Wade (749 A.J.S.), having his T.T. machine with I.O.M. mudguards, gave up and joined the spectators, who, incidentally, also were soaked by the downpour.

In the watercourse, near Llanfair Dyffryn Clwyd, F. E. Marsden (499 c.c. Sunbeam), C. M. Jones (347 c.c. Diamond-B. & S.), and J. W. Jones (348 c.c. Ivy).

From Alt-y-Bady the next hill, Conquering Hero, was reached. This hill, after a long, winding lane approach (where many met a motor 'bus, to their no small consternation), commences with a right-hand hairpin, then a further easy bend and a long, stiff pitch, stony and very greasy in places. Then comes a long greasy track over the mountains to Bryn Eglwys.

Rumour had been busy anent Conquering Hero to such an extent that it is said a surreptitious visit had been made by an amateur road-mending party to scrape the surface. Be that as it may, the ascent was comparatively easy, providing a narrow path first at one side and then at the other, was followed. Indeed, only two failures occurred, R. James (557 B.S.A.), who had to assist his machine, and H. R. Milling (482 Scott), who skidded broadside on for no apparent reason.

On Conquering Hero.

Of the good climbs on Conquering Hero Miss Cottle's ascent was excellent. Her old Triumph pulled well, and as she has a grease gun arrangement and pipes to deliver "belt grip" on to the countershaft pulley, she experienced no belt slip. A steady ascent was made by F. H. Hawkins (349 Raleigh), P. L. Mayo (249 Coventry Eagle) was most certain, and G. Fairly (245 Calthorpe) was slow but very sure.

The only sidecar running was H. T. Williams' 633 c.c. Norton, which came up with the passenger on the carrier and "conking" heavily. Undoubtedly the star ascent of the day was H. F. S. Morgan's, his three wheeler hurtling up,

Once more Alt-y-Bady proved a severe test and only two or three made clean ascents during the pouring rain. J. Knowles (499 c.c. Triumph) ready to put down his feet in case of a skid.

sending a perfect shower of mud and stones from the chain-shod rear wheel.

Back to Denbigh.

By circuitous route through narrow lanes, generally parallel with the main road, Denbigh was again reached, and the second circuit commenced. At Ruthin, however, the lunch stop was held at The Wynnstay Arms Hotel, where an excellent meal was provided.

Approximately one-third of the entry retired before lunch, some due to sheer disgust with the weather.

In the afternoon the conditions were very little different, but the water splash was slightly deeper, and there was a welcome cessation of the rain as Alt-y-Bady was again reached.

As in the morning competitors were dispatched up the hill at half-minute intervals, and the star climb was undoubtedly made by G. F. Burns (499 Sunbeam), the premier award winner of the same event last year. C. M. Jones (347 Diamond-B. & S.) repeated his previous good ascent, and J. H. Fox (633 Norton), after a preliminary wobble, made a perfectly steady "touring" ascent up the middle of the road, regardless of boulders or grease. Hughes, the one-armed Raleigh rider, again made no mistake, and Wills and Price on their Powells were excellent, the former being amongst the very best. H. F. S. Morgan again provided a thrilling display. Even after seeing the astounding performance of his runabout one felt inclined to say, with the old farmer who saw the giraffe at the Zoo, "it may be very nice, but it can't be true."

Other good climbs were made by Miss Cottle (550 Triumph), A. R. Evans (499 Sunbeam), G. L. Falck (499 Rover), and F. E. Marsden (499 Sunbeam). Failures, of course, were legion, even P. L. Mayo (249 Coventry Eagle), B. Kershaw (249 New Imperial), J. A. Newman (496 Douglas), and A. Colcombe (596 Indian), being amongst the vanquished.

The rest of the circuit was merely a scramble against time to hold the 20 m.p.h. average, and it was enlivened by two secret checks. Fine weather finally arrived as the riders finished at Denbigh, and long after everyone had checked in and many had gone home, a competitor rolled in calling for the timekeeper. It was J. W. Moxon (349 Monopole), who deserves a special mention. Delayed with tyre trouble early in the day, he had pegged away round the course, lost all the time available for lunch, and finally checked in about half-an-hour late. His persistence puts to shame all those who retire as soon as the "gold" is out of sight.

Provisionally the principal awards are as follows:—

North Wales Challenge Cup for best performance:—
J. Westwood Wills (547 Powell).

North Wales M.C.C. Amateur Cup (open):—
G. F. Burns (499 Sunbeam).

Powell Challenge Cup for best performance by N.W.M.C.C. member:—
J. Westwood Wills (547 Powell).

N.W. Centre Championship prize:—
W. J. Kellett (499 Sunbeam).

Silver Vase for best passenger machine:—
H. F. S. Morgan (1098 Morgan).

Club Team Silver Cup:—
N. Wales M.C.C. (No. 2 team).
J. R. Davies (499 Sunbeam).
W. J. Kellett (499 Sunbeam).
R. R. Bromley (499 Sunbeam).

Trade Team Silver Cup:—
W. Edwards No. 2 team.
W. Edwards (547 Powell).
S. W. Smith (532 Scott).
A. E. Hughes (550 Triumph).

Gold Medals.—J. Westwood Wills (547 Powell), W. J. Kellett (499 Sunbeam), W. J. Williams (600 Raleigh), A. R. Evans (499 Sunbeam), G. F. Burns (499 Sunbeam), H. F. S. Morgan (1098 Morgan).

MOTOR CYCLE RAILWAY RATES UNDER REVISION.

Possibility of Reduced Charges for Transport of Lightweight Machines by Passenger Train.

PROPOSITIONS have been laid before the Rates Advisory Committee of the Ministry of Transport by the British Motor Cycle Manufacturers' Union urging a reduction in the charges for transporting lightweight machines by passenger train.

The suggestion is that machines under 200 lb. in weight be put in a separate classification, since, considered as bulk, the average lightweight only occupied two-thirds of the cubic space taken up by a typical big single.

Moreover, it was contended that there was considerable variation, taken on a value basis, in connection with the relationship of transport charges by rail. For instance, on the heavy machines the percentage of value in relation to delivery transport charges was 0.8%, whilst in relation to the low weight machines the outside figure was about 3.74%.

It was urged that a 40% reduction in charges should be made for the lightweight machines.

Railway's Objection Easily Dismissed.

The Railway Companies have entered several objections to the proposal, the chief of which was that they were unable to weigh the machines, a large number of stations not being provided with proper appliances to weigh motor cycles, and therefore, however far they might feel disposed to come into line with the application, they did not see how they could very well do so.

It was pointed out that the weights of machines in use was clearly shown by the licence cards they were required to carry by law, and the Chairman, after the Committee conferred, announced the decision "that it would be a good plan to have the two classes."

— —

IMPROVED OVERSEAS TRADE FOR JULY.

BOTH imports and exports of motor cycles for July show a decided increase on the corresponding figures for June. The total value of imports has grown from £8,308 to £12,066, and of exports from £51,114 to £77,901. Incidentally as the following tabular excerpts from the Trade and Navigation Accounts show, the export figure is very nearly as high as it was in July, 1921. But it is less than a third what it was in 1920; and imports have fallen even more heavily.

MOTOR CYCLE IMPORTS.

	1920.	1921.	1922.
Value of machines ...	£40,872	£5,828	£4,750
,, parts	£10,307	£14,879	£7,316
Total value	£51,179	£20,707	£12,066

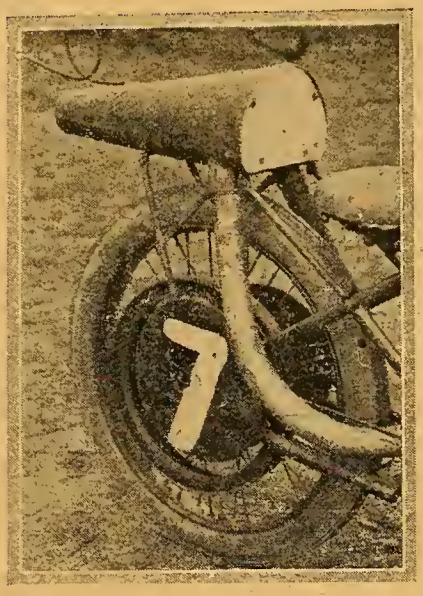
MOTOR CYCLE EXPORTS.

	1920.	1921.	1922.
Value of machines ...	£203,849	£54,834	£50,065
,, parts	£67,229	£23,904	£27,836
Total value	£271,078	£78,738	£77,901

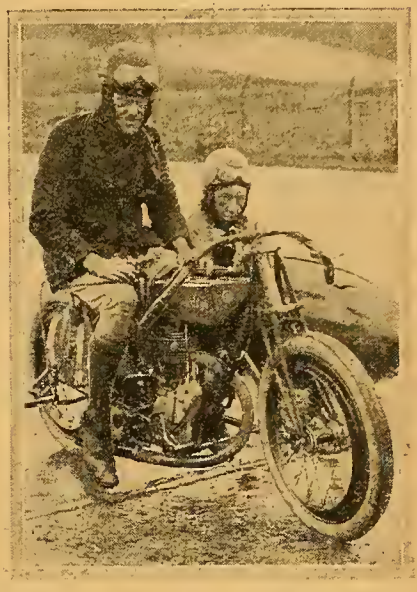
RAIN AGAIN STOPS BROOKLANDS MEET.

Four Races Only Decided at the Fifth B.M.C.R.C. Meeting on Saturday.

E. Remington (998 c.c Blackburne) who scored a win in the 1000 c.c. solo handicap.



Col. Stewart's silencing arrangements on his big twin Trump-Anzani.



R. E. Dicker (499 c.c. Rudge sidecar) winner of the only passenger event to be decided before the rain.

IN the short space of time between 2 p.m. and the opening of the heavens shortly after three, four heathily contested races were decided at last Saturday's B.M.C.R.C. Brooklands meeting.

It was a day out—or rather a half-day—for E. Remington and Blackburne engines; the combination scored notable wins in two events. A Zenith-Bradshaw and a 499 c.c. Rudge sidecar respectively surprised the handicappers by annexing the remaining first places. There were no scratch races on the programme, and several well-known riders were absentees because they failed to see eye to eye with the handicapping authorities.

In the first race Le Vack appeared on a new 250 c.c. New Imperial, instead of the 100 c.c. larger model which he had entered, and consequently he was moved from the scratch mark, being allowed 54s. This left R. Weatherell (345 Weatherell), E. Remington (348 Edmund-Blackburne), and G. H. Williams (348 Weatherell) on the back mark—quite a compliment to Blackburne engines generally. Remington rose to the occasion, although F. A. Longman (o.h.v. A.J.S.) made the very best use possible of 9s. start. The Curtis, ridden into third place from very nearly the limit mark, has a sleeve-valve Barr and Stroud engine.

350 C.C. SOLO HANDICAP.

1. E. Remington (348 Edmund-Blackburne), 21s. handicap.
2. F. A. Longman (349 A.J.S.), 30s.
3. G. L. Werts (350 Curtis-B. and S.), 2m. 3s.

Winner's speed=71.52 m.p.h.

Thirteen started in the 500 c.c. event, including two new-comers—G. Cowley, sen. (Sunbeam), who made an excellent get-away, to disappear for the rest of the afternoon, and P. Cunningham (P. and M.), who rode a good race into sixth position. The limit man, J. Carter, on an old single-cylinder Zenith, kept his lead for one lap, but R. A. Mallet, on the modern version of the same make, was ahead at lap two, with R. O. Lowe and P. G. Kennedy (Nortons) in pursuit. Mallet retained his place on the final lap, and R. E. Dicker squeezed some pre-war-like speeds from his Rudge, running it into a creditable second despite a 51s. penalty on the leader. Mallet, however, lost some time by employing a push-start at the commencement.

500 C.C. SOLO HANDICAP.

1. R. A. Mallet (496 Zenith-Bradshaw), 1m. 51s
2. R. E. Dicker (499 Rudge), 1m.
3. R. O. Lowe (490 Norton), 1m. 27s.

Winner's speed=67.10 m.p.h.

G. L. Werts, who introduced a new make at Brooklands—a 350 c.c. Barr and Stroud engined Curtis. He was third in the first race.

R. A. Mallet (496 c.c. Zenith-Bradshaw), who won the 500 c.c. event at 67·15 m.p.h.

Rain Again Stops Brooklands Meet.—

The 1,000 c.c. race was really exciting. Out of ten entries, nine started, 21 seconds separating them all except the two front men—G. Packman (Packman-Jap) and F. A. Longman (Ariel-M.A.G.)—who were both allowed 54 seconds. Col. Stewart, who had fitted a combined silencer and streamline tail to his Trump-Anzani, lost his chance by failing to start promptly; whereas Remington's big Blackburne accelerated in a positively astounding manner.

Although under-geared and misfiring, the Packman led the field for a lap, being followed by Longman. O. M. Baldwin (Matchless-M.A.G.), T. R. Allchin (Harley-Davidson), Remington and Col. Stewart, these five almost neck and neck. Remington obviously had gained most ground, and no one was surprised when he led next time round. C. F. Temple (Harley-D.) made a valiant effort to pass the Blackburne, but his luck seemed to have quite deserted him, and Remington hurtled home at over "ninety," unmolested.

1,000 C.C. SOLO HANDICAP.

1. E. Remington (998 Blackburne), 3s.
2. O. M. Baldwin (992 Matchless-M.A.G.), 9s.
3. T. R. Allchin (989 Harley-Davidson), 15s.

Winner's speed=89.10 m.p.h.

But for a burst tyre on his last lap, F. W. Jelpke (348 Weatherell sc.) would have enjoyed a runaway win in the 600 c.c. sidecar handicap. As it was, he ran from the aeroplane sheds to the finishing line on a flat rear tyre, and was only passed by two others, R. E. Dicker (499 Rudge sc.), who had allowed bim over a minute, and V. E. Horsman (596 Norton sc.), who started scratch and all but overhauled the field. Le Vack had fitted a sidecar to the wonderful 350 c.c. o.h.v. New Imperial-Jap, but a broken throttle wire prevented us from seeing how it behaved in double harness.

600 C.C. SIDECAR HANDICAP.

1. R. E. Dicker (499 Rudge sc.), 1m. 24s.
2. V. E. Horsman (596 Norton sc.), scratch.
3. J. L. Emerson (496 Douglas sc.), 6s.

Winner's speed=59.15 m.p.h.

SHEFFIELD HILL CLIMB IN THE RAIN.

Keen Rivalry and Great Enthusiasm Despite Downpour at Yorkshire Centre Speed Event.

THE Sheffield and Hallamshire M.C. and L.C.C. was very unfortunate on Saturday, for the Yorkshire A.C.U. Centre Hill-climb, organised by the club on the Ringinglow Road, was spoilt by incessant rain. But it was by no means an unsuccessful venture.

Despite the drenching rain an enthusiastic ardour pervaded the whole affair, and a good number of "mudlarks" made the journey out of the city, to be rewarded by some remarkably fine riding. Nortons were well to the fore, and registered many wins.

Good Organisation.

Every event was run off with clock-like precision, and not a single note of complaint could be registered against the organisation. The course was well marshalled by club officials and police, and additional precautions were taken by roping off either side of the road.

Mrs. Janson (Trump) was geared too high for the course, and F. W. Dixon (Harley) was troubled with misfiring, probably due to the heavy rains. Thrilling riding was exhibited in the premier event by R. T. Cawthorne and G. W. Walker (Nortons), and the local rider, E. Searle (Sheffield-Henderson). The course was a measured half-mile. Results:—

EXPERTS (SOLO UP TO 250 C.C.).

1, R. L. B. Taylor (Levis), 34⅕s.; 2, S. G. Gambles (Diamond), 36s.; 3, J. S. Jenkins (Velocette), 36⅖s.

EXPERTS BARRED (SOLO UP TO 250 C.C.).

1, H. J. Shuttleworth (Velocette), 41s.

EXPERTS SOLO (UP TO 350 C.C.).

1, E. Searle (Sheffield-Henderson), 30⅕s.; 2, J. Cooke (Edmund), 33⅖s.; 3, C. N. Sadler (Sheffield-Henderson), 35⅕s.

EXPERTS BARRED (SOLO UP TO 350 C.C.).

1, G. N. Sadler (Sheffield-Henderson), 32⅘s.; 2, J. Cooke (Edmund), 33⅕s.; 3, G. H. Craven-Phillips (Beaumont), 34⅕s.

EXPERTS SOLO (UP TO 500 C.C.).

1, R. T. Cawthorne (Norton), 26⅕s.; 2, G. W. Walker (Norton), 26⅘s.; 3, E. Searle (Sheffield-Henderson), 27⅕s.

A wet event. At the start of the Sheffield and Hallamshire club's hill climb last Saturday. E. Searle (Sheffield-Henderson) is the rider in the foreground.

EXPERTS BARRED (SOLO UP TO 500 C.C.).

1, F. Sisson (Norton), 27s.; 2, J. Cooke (Edmund), 29⅕s.; 3, J. H. Illingworth (Norton), 30⅕s.

EXPERTS SOLO (UP TO 600 C.C.).

1, G. W. Walker (Norton), 26⅕s.; 2, R. T. Cawthorne (Norton), 26⅖s.; 3, E. Searle (Sheffield-Henderson), 27⅖s.

EXPERTS BARRED (SOLO UP TO 600 C.C.).

1, J. Cooke (Edmund), 30⅖s.; 2, J. H. Illingworth (Norton), 30⅕s.; 3, W. H. Gillott (Norton), 32⅖s.

EXPERTS SOLO (UP TO 750 C.C.).

1, R. T. Cawthorne (Norton), 26⅘s.; 2, G. W. Walker (Norton), 27s.; 3, E. Searle (Sheffield-Henderson), 27⅕s.

EXPERTS BARRED (SOLO UP TO 750 C.C.).

1, J. Cooke (Edmund), 30⅕s.; 2, J. H. Illingworth (Norton), 30⅖s.; 3, W. H. Gillott (Norton), 32⅖s.

EXPERTS (SOLO UNLIMITED).

1, R. T. Cawthorne (Norton), 26 ⅗s.; 2, G. W. Walker (Norton), 26⅘s.; 3, E. Searle (Sheffield-Henderson), 27⅖s.

EXPERTS BARRED (SOLO UNLIMITED).

1, Frank Sisson (Norton), 26⅘s.; 2, G. E. Carnell (Harley-Davidson), 28⅗s.; 3, J. Cooke (Edmund), 30⅕s.

EXPERTS (SIDECARS UP TO 350 C.C.).

1, L. Padley (Sheffield-Henderson).

EXPERTS BARRED (SIDECARS UP TO 350 C.C.).

1, A. A. Fraser (Sheffield-Henderson).

EXPERTS (SIDECARS UP TO 500 C.C.).

1, R. T. Cawthorne (Norton), 31⅗s.; 2, G. W. Walker (Norton), 33⅗s.; 3, E. Searle (Sheffield-Henderson), 35s.

EXPERTS BARRED (SIDECARS UP TO 500 C.C.).

1, S. Ollerhead (Douglas), 41½s.; 2, J. H. Illingworth (Norton), 41⅘s.; 3, G. W. Horridge (Douglas), 42s.

EXPERTS (SIDECARS UP TO 600 C.C.).

1, R. T. Cawthorne (Norton), 32⅘s.; 2, E. Searle (Sheffield-Henderson), 32½s.; 3, G. W. Walker (Norton), 33s.

EXPERTS BARRED (SIDECARS UP TO 600 C.C.).

1, W. H. Gillott (Norton), 33s.; 2, J. H. Illingworth (Norton), 39s.; 3, G. W. Horridge (Douglas), 41⅗s.

EXPERTS (SIDECARS UP TO 750 C.C.).

1, R. T. Cawthorne Norton), 31s.; 2, G. W. Walker (Norton), 33s.; 3, E. Searle (Sheffield-Henderson), 33⅓s.

EXPERTS BARRED (SIDECARS UP TO 750 C.C.).

1, J. H. Illingworth (Norton), 38½s.; 2, S. Ollerhead (Douglas), 40⅘s.; 3, W. H. Gillott (Norton), 42s.

EXPERTS (SIDECARS UNLIMITED).

1, R. T. Cawthorne (Norton), 31⅗s.; 2, G. W. Walker (Norton), 33½s.; 3, E. Searle (Sheffield-Henderson), 33⅓s.

EXPERTS BARRED (SIDECARS UNLIMITED).

1, S. Ollerhead (Douglas), 39½s.; 2, W. H. Gillott (Norton), 41s.

FASTEST TIME OF THE DAY—SOLO.

G. W. Walker (Norton), 26⅓s.

FASTEST TIME OF THE DAY—PASSENGER VEHICLES.

R. T. Cawthorne (Norton), 31s.

Fastest time of the day by an amateur full member of the Sheffield and Hallamshire M.C. and L.C.C.: G. E. Carnell (Harley-D.), 28⅗s.

CURRENT CHAT (continued from p. 235).

Roadside Luncheons.

Perhaps it is the rapacity of mine host, a desire to save time, or pure love of the open air, but the practice of taking *al fresco* luncheons by the wayside is increasing in popularity.

Seaside Landladies.

Motor cycle camping is booming, more owners indulging in this kind of holiday than ever before—and no wonder, considering its cheapness. Seaside landladies are still seaside landladies in their charges.

The Late Sir Albert K. Rollit.

To the older readers of *The Motor Cycle* the name of Sir Albert K. Rollit, whose death, we regret to say, was announced last week, was chiefly known as president of the Stanley Show, an office which he held for many years.

A Fine Performance.

Whereas the Swiss team gained 2,990 marks during the International trial, the Worcester M.C.C. team—Giles, Williams, and Harris—all on A.J.S. machines, beat them as regards a total number of marks by 4. Bravo! Worcester.

What was it?

Returning from Denbigh to London with the report of the North Wales open trial last week-end, we saw at intervals throughout the country men apparently taking a census of the traffic on the roads. Were they disguised policemen, minions of the Transport Ministry, or Bolsheviks counting the motoring aristocracy?

Unsuitable Motor Coaches.

Much attention has been focussed in the Press on certain char-à-banc accidents during the holiday season. Some may think the occurrences have been accorded disproportionate prominence. With that point of view we are not so much concerned, says *Motor Transport*, but what does appear particularly disquieting is the fact that photographs of one of the accidents appear to show that the chassis of the vehicle concerned was of a make only intended for private car work, and an old model at that. True, the char-à-banc was but a small one, but even so, it is asking too much to expect brakes and other mechanism to deal with loads double those for which they were designed.

The late Viscount Northcliffe.

The motoring movement has lost another pioneer in the death, last Monday, of Alfred Charles William Harmsworth, Viscount Northcliffe. Lord Northcliffe, who was one of England's most successful journalists, commenced his newspaper career in Coventry with the proprietors of this journal. Long before the Emancipation Act permitted the use of motor cars in this country, Lord Northcliffe ran a car which he kept in France. A leading article in No. 1 of *The Daily Mail* predicted the revolution of transport which the motor car, then almost unknown, was to bring about. Aviation, too, owes something to the dead Peer, who encouraged its development by offering attractive money prizes for such pioneer efforts as the first Cross-Channel flight.

Better Road Construction Wanted.

A few months ago the fine road between Sunbury and Staines was remade with tarred macadam. Already it is developing unpleasant waves. When will the even-surfaced road on solid, unyielding foundations materialise?

Baiting the Speed Merchant.

In the Surbiton Motor Club's circular advising members of the forthcoming South-eastern Centre Brooklands meeting, it is said that "this is an excellent opportunity for you to prove that you have the fastest 'bus of its kind on the road, and that you have averaged over '60' between 'the Talbot' and Kingston after a club supper."

A Benevolent Fund Cruise.

An evening cruise arranged on behalf of the Cycle and Motor Cycle Trades Benevolent Fund took place last Friday evening, when a party of over 500 left Glasgow by special train to Gourock, and sailed on the "Duchess of Argyll" down the Clyde to the Kyles of Bute and back.

What he Owes to the Police.

Prior to the start of the International Trial G. S. Davison was fined for exceeding the limit. At the end of the event he won a handsome gold watch presented by the Swiss Federal police, so now his feelings towards them have changed for the better.

Noise about Silencers.

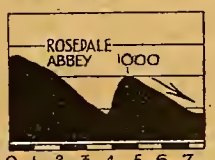
The activity of the police at Sunbury-on-Thames renders this district unhealthy for motor cyclists with second-grade silencing arrangements. A correspondent complains of a recent experience when, after riding his machine for nearly four years in the locality without any alterations to his silencer, he was suddenly pounced upon and fined.

F.I.C.M. Meeting at Geneva.

Following the conclusion of the International Six Days' Trial, the Summer Congress of the F.I.C.M. was held at the Swiss A.C. premises at Geneva. Delegates attended from Great Britain, Switzerland, Belgium, Holland, France, Denmark, Sweden, Italy and the United States, and several important decisions were made. Among these were, that motor cycle interests should be looked after at the International Traffic Congress by delegates from the F.I.C.M.; that racing helmets should be compulsory in all races held under the Federation rules; that in Class E (1,000 c.c.) records the minimum tyre size should be 65 mm.; that on the occasion of record attempts the only parts of a machine which might be changed were the plug, chain or belt, wheel and/or tyre; and that mile and kilometre records might be made from a standing start.

SEVEN OF THE MOST IMPORTANT HILLS IN THE SIX DAYS TRIALS.

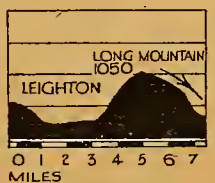
Monday morning. 24 miles from York.



Monday morning. 63 miles from York.

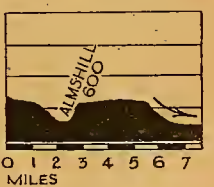
Tuesday morning. 35 miles from Buxton.

Tuesday afternoon. 61 miles from Rudyard.



Wednesday morning. 18 miles from Shrewsbury.

Wednesday morning. 65 miles from Shrewsbury.



Friday morning. 26 miles from Oxford.

CLUB NEWS (continued from p. 230)

South-Eastern Centre A.C.C.

Entries for the race meeting at Brooklands on September 2nd close by the last post on Saturday next. The event, which is being organised by the Surbiton M.C., is open to members and all clubs affiliated to the Centre, and entries will be received by Mr. W. B. Reeve, 25, Ditton Road, Surbiton.

Worksop M.C. and L.C.C. and Mansfield and District M.C. and L.C.C.

Joint speed trials at Clipstone Drive—the Mansfield course of 100 m.p.h. fame—will be held on Saturday, August 26th. Particulars are obtainable from Mr. A. E. Stafford, Campion Cycle Co., Worksop, or Mr. G. Mills, 16, Hall St., Mansfield.

Liverpool M.C.

Motor cycles, sidecars, and three-wheelers are eligible to compete in the non-stop "regularity and reliability" trial which is being held on the 27th inst. from Frodsham for the Colmore (Liverpool) Trophy. Entries, which close by the first post on Monday, the 21st inst., should be sent to Mr. V. E. Horsman, 7, Mount Pleasant, Liverpool.

Ross and District M.C. and L.C.C.

First place in the reliability trial held recently for the Triumph gold medal, for which there were 22 competitors, was won by W. A. Clark (596 Indian Scout). Silver medals were awarded to P. Little (293 Calthorpe), W. E. Smith (499 Sunbeam), A. Matthews (349 Coulson), and C. H. Wheildon (349 A.J.S.).

A hill-climb is being held at Sandford Pitch on the 22nd inst.

Ipswich and District M.C.C.

To be held under ordinary touring conditions, a joint reliability trial over a course approximately 200 miles is being arranged for September 10th, when the Beardmore Challenge Cup will be competed for. The following clubs are eligible: Bury and D. M.C.C., Colchester M.C.C., Ipswich and D. M.C.C., and Norfolk M.C. and L.C.C. Full particulars may be obtained from Mr. G. Bird, "Sandhurst," Friars Rd., Ipswich.

North Cheshire M.C. and L.C.C.

With the Blake Cup as premier award, the club held a reliability trial on July 30th, the course being laid in North Wales over a distance of 70 to 80 miles. The way was most exacting on account of rather dangerous descents, which caused most competitors to lose time. The observers were also kept pretty busy on Horsman Ladder. Results:—Blake Cup and Gold Medal: B. H. Davenport (G.N.). Medal for best Solo: L. K. Ward (490 Norton).

Week-End Club Events.

Aug. 19th.—Bulwell M.C.—Run.
Aug. 19th.—Coatbridge, Airdrie and District C.C.—Speed Trials.

Aug. 20th.—Rotherham and District M.C.—Reliability Trial.
Aug. 20th.—Leeds M.U.—Run to Aysgarth.
Aug. 20th.—Bridgnorth and District M.C.C.—Rally.
Aug. 20th.—Rochester, Chatham and District M.C. and L.C.C.—Run to Margate.
Aug. 23rd.—Leeds M.U. Impromptu Run.
Aug. 23rd.—Worcestershire M.C. and District M.C.C.—Evening Main Road Trial.

First inter-team trial for clubs in the North of Scotland, when, as will be seen, the going was more than a trifle rough. Elgin and District M.C. and L.C.C. organised the event.

Aberdeen and District M.C.

The gymkhana held at Potarch on the 5th inst. was a good success, all the competitions arranged receiving good entries.

South-Western Centre A.C.U.

Saturday, December 14th, has been allotted by the Centre to the Taunton M.C. and L.C.C. for a Centre trial. The trophies will include the local Traders' Bowl, the Autumn Bowl, and the Team Cup, in addition to other awards.

Doncaster and District M.C.C.

Seventeen members took part in the Danum Cup trial, a run to Saltburn through the downpour on Bank Holiday Monday. Competitors were timed up Sutton Bank. Results:—

Gold Medal: 1st, H. Christian (490 Norton), with 12 bonus marks; 2nd, H. Moate (550 Triumph sc.), 10 bonus marks; 3rd, H. Dodds (211 Enfield), 6 bonus marks; 4th, G. Higginbottom (998 Harley-Davidson sc.), 3 bonus marks.

The "Danum Bowl," H. Christian.

The "Clark Cup," H. Dodds.

The best sidecar performance, H. Maote.

York and District M.C.

Results of the York-Edinburgh-York trial have been issued as follows:—

SOLO CLASS.

Rudge-Whitworth Cup and Gold Medal.—Billy Hodgson (499 Sunbeam).

Gold Medals.—W. Atkinson (550 Triumph), G. A. Reed (532 Scott), W. Marriott (350 Coventry Eagle), Mrs. Janson (350 Coventry Eagle), J. A. Watson Bourne (976 Brough Superior), G. F. Lazenby (350 Coventry Eagle), Wm. Westwood (499 Triumph), A. Winter (550 Triumph), J. Ford (748 F.N.), W. Turnpenny (499 Rudge-Multi).

Silver Medal.—G. W. Fryatt (370 Connaught).

SIDECARS AND 3-WHEELERS.

Silver Vase and Gold Medal.—Geo. W. Shepherd (L.S.D. three-wheeler).

Gold Medal.—W. Holloway (770 B.S.A. sc.).

Dublin Ramblers M.C.C.

This recently formed amateur organisation held a hill-climbing competition on Saturday last at the De Selby Quarry Hill, the results of which were as follows:—

250 C.C. (TWO-STROKE) CLASS.

	Hcap. times.
1. J. A. H. Waters (Enfield), 5s.	47⅘s.
2. W. R. M. Hewitt (Enfield), 6s.	48⅖s.
3. L. A. W. Orr (Enfield), 6s.	61⅓s

350 C.C. CLASS.

1. W. R. M. Hewitt (Enfield), 17s. ...	36⅕s
2. S. Woods (Cotton), scratch	36⅖s
3. G. Kennedy (Enfield), 17s.	38s.

600 C.C. CLASS.

1. S. Woods (Cotton), 2s.	33⅘s.
2. H. G. Ellerker (A.J.S.), 12s.	34⅗s.
3. J. F. Cathcart (Humber), 4s.	36⅖s.

Bradford M.C. and L.C.C.

The results of the 24 hours Bradford to London and back reliability trial, which took place on the 29th and 30th of last month, are now available. The competing clubs were: Bradford M.C. and L.C.C. (70), Dewsbury and District (13), Wakefield and District (11), Hull Motor Club (9), and Leeds and District (5), giving a total of 108 entries.

Solo machines.—The "Mitchell" Cup won outright: G. R. Grundy (499 Sunbeam), 246 seconds error. Gold medals: R. Turner (494 Douglas), F. Bray (550 Triumph), G. A. Reed (532 Scott), J. A. Leyland (555 P. and M.), W. Atkinson (550 Triumph), N. F. Brooke (678 N.U.T.). Silver medals: J. R. Grandison (496 Zenith), H. Askham (550 Norton).

Sidecar machines and three-wheelers.—The "Hodgson" cup won outright: G. Allan (499 P. and M. sc.), 84 seconds error. Gold medals: G. M. Townsend (555 P. and M. sc.), A. D. Thornton (499 P. and M. sc.), S. Jepson (799 A.J.S. sc.), P. Shaw (550 P. and M. sc.), A. E. Sellers (976 Matchless sc.), S. M. Haigh (555 P. and M. sc.), H. Moore (499 P. and M. sc.), J. A. Smith (499 P. and M.), G. Scott (976 Matchless sc.), W. A. Dovener (532 Scott sc), W. E. Anderton (499 P. and M. sc.), F. Smith (925 Clyno sc.), R. Lewis (555 P. and M. sc.), J. C. Neilson (998 Harley-Davidson sc.), D. Rhodes (Scott Sociable), G. W. Chambers (490 Norton sc.), G. W. Shepherd (976 L.S.D.), Miss I. Pickles (534 Scott sc.), C. N. Robinson (550 Triumph sc.), H. Firth (770 P. and M. sc), D. Brigham (680 Omega sc.), H. Hainsworth (976 L.S.D.), J. Robinson (976 L.S.D.), C. F. Swaine (976 L.S.D.), H. Graham (490 Norton). Silver medals: G. Early (532 Scott sc.), W. Wood (532 Scott sc.), E. P. Dodd (499 Sunbeam sc).

Lady drivers only, any vehicle.—The "Ida Pickles" cup was won outright by Mrs. K. Appleton (499 P. and M. sc.), with an error of 366, and a gold medal was awarded to Miss P. Barker (499 P. and M. sc.).

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle, Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

DRIP FEED ON SCOTT.

As I have just had my Scott engine overhauled and do not care to run any unnecessary risks, will you inform me how many drops of oil per minute are necessary? The "blue haze" from the exhaust seems to me to be rather unreliable.—A.H.P.

About 30 drops per minute at each lubricator.

AERO DYNAMOS.

Are ex-W.D. aero dynamos suitable for lighting the three lamps of a sidecar outfit?—D.McC.

Aero dynamos are not usually suitable for motor cycle lighting, as they are designed to run at very high speeds, and require special cooling arrangements when they are used on machines running at ordinary road speeds. On an aeroplane, of course, they are cooled by the rush of air to which they are exposed.

MINIATURE ON OBSERVED TEST. Recently G. A. Cade rode a 164 c.c. Economic from London to Edinburgh under A.C.U. observation. The Great North Road was followed, deviating through Wooler, Greenlaw and Lauder, and including the ascent of Carfrae Hill. The journey was done in three days and the average speed was about 17·02 m.p.h. There were only four involuntary stops, all of a minor nature. An official certificate is being issued.

Important Dates.

Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.

Sat., Sept. 2nd.—Cheshire Centre A.C.U. Open Reliability Trial.

Fri., Sept. 15th, to Mon., Sept. 18th—Anglo-Dutch Trial in Holland.

Sat. Sept. 16th—The Scott Trial.

Sat., Sept. 23rd—500 Mile Race at Brooklands.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd.—Olympia Motor Cycle Show.

FITTING BIGGER TYRES.

The tyres on my Excelsior machine are 650×65 mm. on the front wheel and 26×3in. to fit 2½-in. rim on the back. Both tyres fit either wheel. I should like to fit oversize tyres. Will 700×80 mm. fit my rims, and are they advisable?—F.J.

Tyres of 700×80 mm. dimensions fit 650×65 mm. rims, on which they are perfectly satisfactory.

DEFECTIVE PLUG INSULATION.

The plug of my old-type Minerva appears at times to spark not at the points but some distance higher up. What is the fault, if any?—A.P.S.

The plug is apparently shorting across the insulation. A new one is advisable.

NEW PISTON RINGS.

(1) What method should I adopt for grinding in new piston rings? (2) What measurement does 0.008 represent? (3) Can I purchase a feeler of above gauge at an engineer's shop or motor cycle accessory store?—A.W.

(1) It is unnecessary to grind in new rings if they are supplied either by the makers or by piston ring specialists. (2) 0.008 stands for eight thousandths of an inch. (3) You can purchase a set of feeler gauges at a good ironmonger's or engineering sundries shop.

SCOTT CHAIN ADJUSTMENT.

I have a 1921 Scott, and at present am having considerable trouble with the gear chains. If I run the machine with the low gear chain properly adjusted, the high gear chain tends to mount on the sprockets of the gear wheel, which makes driving very uncomfortable. If a cranked link is inserted in the high gear chain so as to give the correct tension in that chain, the low gear chain rubs the tray (or undershield), and ultimately jumps off the sprockets. How can I cure this trouble? The chains can hardly be worn yet as the machine has hardly done more than 800 miles, and except for one occasion (and that for a short burst) has never done more than 25 m.p.h. I have measured the chains with a new length, and no difference in length is apparent, and several friends to whom I have shown the chains say that no wear is apparent.—F.P.M.

It is most unusual for the chains to come off the sprockets if the countershaft is in alignment with the engine-shaft, even if the chains are run very slack indeed. You should get the maker's instruction booklet and pay particular attention to the alignment of the countershaft. It is quite easy to test this by measuring from the centre of the countershaft to the crankcase door strap bolts.

POWER OF SMALL TWO-STROKE.

What horse-power should an engine (two-stroke) of 2¼ in. × 2½ in. bore and stroke develop normally, and at its highest possible speed?—C.D.F.

It is almost impossible to answer your question with accuracy, as two-stroke engines vary to a very large extent, often intentionally. The average low speed of a two-stroke engine of the size you mention would probably produce about 2 to 2½ b.h.p. under normal conditions, with a maximum of 3 to 4 b.h.p. It should, however, be possible to exceed this figure quite considerably in the case of a high-speed engine.

FROM NEUTRAL TO LOW.

There is great difficulty in engaging low gear on my 1921 Indian when starting off. I can obtain a silent engagement only by sacrificing the gripping power of the clutch. Then when I adjust the clutch I fail to obtain an easy gear engagement. I need hardly say I push the clutch out as far as it will go before attempting to move the gear lever (it is not of the inter-connected type). Once on the move, I can change up or down all right. It would appear to me that the inner portion of the clutch nearest the gear box revolves, although the outer portion remains stationary, and that, of course, means that the main shaft is revolving.—G.A.C.

It would appear that the difficulty you experience when engaging low gear is due to the clutch dragging slightly. If you cannot correct the adjustment of the clutch so that it is fully disengaged you might find it possible to engage the low gear easily from the neutral position by giving the exhaust valve lifter a momentary flick as you pull the gear lever over; of course, the exhaust valve must not be raised long enough to stop the engine, and the machine should be held by the brake.

ELUSIVE WHIRRING.

I have a 348 c.c. Douglas (1915) which is apparently in perfect condition, having recently been overhauled; but when the engine is running there is a noise just like a dynamo working, and the faster the engine goes the louder it hums. It makes the same hum when engine is free as it does when in gear, so it is evidently not in the gear box. The engine is well oiled, and I cannot find any stiff parts in bearings when turning flywheel round. The chain is not catching on anything, nor is the flywheel. I have a C.A.V. magneto fitted, but I understand these do not require oiling. Would it make a humming sound if it did? It does not appear to come from valves or the guides, and I have fitted new high tension wires, but I have been unable to locate the humming up to now. Would you tell me of any part which would make a humming sound if not perfect?—H.H.

It is probable that the noise is coming from the timing gears, which may be worn, or the magneto driving gear may not be correctly meshed. This is a most likely cause of the trouble. We should advise you to try varying the mesh of the magneto gear by placing a thin packing (paper, card, or sheet metal) below the magneto before making other adjustments. Next make certain that your driving chain is not too tight. It would be most unusual if the magneto itself caused the noise, but if it has been running since 1915 it would be advisable to have the end plates removed and the bearing repacked with vaseline.

OIL LEAKS FROM GEAR BOX.

Oil escapes from the belt pulley side of my Sturmey-Archer three-speed box. Oil splashes on the belt and on the cylinder, etc. The belt pulley has recently been adjusted for slackness. Oil escaped, however, before overhaul, though in less quantity. I understand all bearings are in good order. Price's Huile de Luxe mixed with Hub lubricant has been employed for lubricating the gears. (Mileage—5,000 solo.)—E.D.B.

Other than that the gear box is over-filled with oil we cannot trace any alternative cause for the trouble you describe. If it persists with a smaller quantity of oil in the gear box, we would recommend that you write to the makers.

MATERIAL FOR LEG SHIELDS.

On fitting leg shields to my machine I find that being made of metal they accentuate by resonance the noise made by the partially enclosed engine. I require a sheet-like non-metallic material having the following properties:—Lightness, toughness, durability, capability of being moulded into the shape of the shields and rigid enough to remain as moulded; it must be fairly cheap. Can you tell me if I can procure such a substance?—W.E.M.

A material to suit your requirements is ordinary sheet fibre which has been used in body construction. It might require some slight stiffening, but this should not be difficult to arrange. A light metal beading would improve the finish and probably be sufficient for your purpose.

OWNERSHIP OF STOLEN MACHINE.

I bought a second-hand sidecar outfit from a private individual, and obtained an authentic stamped receipt for the purchase money. But the outfit happens to be a stolen one. Some days later the person from whom it was stolen identified the machine while I was riding it, and claimed it as his property. How do I stand in the matter?—O.D.L.

In the event of your unwittingly purchasing a stolen machine, the law would compel you to hand it over to the rightful owner. You can only claim against the person from whom you purchased the machine.

STARTING DIFFICULTIES.

I am troubled by difficult starting from cold on my 557 c.c. B.S.A. Can you give me any useful suggestions? — J.H.B. Lagos.

We should have imagined that in your climate starting the engine even from cold would be fairly easy. We would suggest the following points in order to make the starting easier. Open the adjustable jet on the B.S.A. carburetter one complete turn, advance the ignition almost fully, and place the gear lever in the third speed, releasing the exhaust valve, when the foot starter pedal is almost at the bottom of its stroke.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

D.R. (Hull).—348 c.c. W.D. Douglas; 976 c.c. Royal Enfield, sidecar.

S.R.P. (London).—398 c.c. A.B.C.: hints on tuning, etc.

L.B. (Chesterfield).—225 c.c. Triumph.

READER'S REPLY.

HEAVY FUEL CONSUMPTION.

Perhaps, "G.B.," you would like to know my experience, and how I have cured the similar trouble that I had with my Douglas. The jet in the Amac carburetter was a 27. I changed it to a 24, and the misfiring at once ceased and has never returned, and the petrol consumption changed from about 55 m.p.g. to practically 80 to the gallon! I have made quite sure that what I assert is correct, for I have been testing it for two months. J. H. Y.

HARD LUCK! Alec Jackson, of Keighley, who privately entered the Belgian Grand Prix and won. He had trouble with a plug, however, and, because he exchanged it for one offered by a spectator, he was disqualified.

Desmond's Miracle Oil
A Revelation in Lubrication

USED BY THE WINNERS OF NINE T.T. RACES IN NINE WEEKS.

NO MOTOR CYCLIST SHOULD USE A DROP OF PETROL UNTIL TREATED WITH

MIRACLE OIL

LUBRICATES THE PISTON.

LUBRICATES THE VALVES.

Half an ounce to every gallon of fuel—petrol or benzol.
Lubricates combustion chamber walls, piston rings, valve stems and guides.
In fact, lubricates properly those parts of engine which the oil in base chamber cannot properly reach.
AND FURTHER—
Owing to its peculiar character, carbon deposit is considerably reduced.
The better lubrication MIRACLE OIL provides produces an engine condition which gives much smoother running with greater power output; improves compression and enables carburetter to be set for weaker mixture, thus giving more miles per gallon. The consumption of ordinary lubricating oil is also much reduced.
The better lubrication alone greatly increases life of engine and saves more than the oil costs.
Good things always have imitations, so beware, and only add MIRACLE OIL to your fuel.

The Best Road Guide for Motor Cyclists

THE MOTOR CYCLE ROUTE BOOK

With Road Maps of England & Wales, Scotland, and the London District

A WELCOME departure from the stereotyped form of road book is made in "THE MOTOR CYCLE" ROUTE BOOK. In addition to the usual routes from London, radiating main routes are given from other large and populous centres in England and Wales, and Scotland, as well as "linking-up" routes from all other cities and towns of fair size. The intersecting or linking-up routes are clearly shown by reference numbers. The items of interest on the main roads are described by the well-known authority on roads, Mr. Chas. G. Harper. A useful set of Maps of England, Wales, and Scotland, in Atlas form, and printed in red and black, is included.

List of Contents

Radiating Routes from large and Populous Towns, Traffic-avoiding Routes, and Routes into and out of London.
Linking-up Routes from and to smaller Towns.
List of Ferries in England, Wales, and Scotland, with their charges.
List of Speed Limits in Various Counties.
Lighting up Time Table.
Also 32-page MAP SECTION.

Price 2/6 net. By Post, 2/10.

Obtainable from ILIFFE & SONS LTD., DORSET HOUSE, TUDOR STREET, LONDON, E.C.4
And Leading Booksellers.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box ooo, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. ooo, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes: in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, ½%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

Coventry Eagle

NEW 1921 Coventry Eagle, 3½h.p., 3-speed; £70.—Snipe, 330, Euston Rd. [6907

De Luxe.

TWENTY-FIVE Pounds off current list prices has focussed public attention on the most remarkable motor cycle in the world—the De Luxe Barr and Stroud. There is none other that will stand comparison. One delighted customer writes: "I did 654 miles on one of your machines in two days, averaging 144 miles per gallon of petrol." Think of that for economy! Facts, not fiction. But here is something more startling still. We are prepared to take twenty stone and a hefty sidecar up a one-in-three gradient without touching bottom gear—an unparalleled performance, but doubly proved. It is folly contemplating the purchase of any other machine until you have seen our latest production, which embodies double expanding brakes on car lines, Brampton latest forks, Amac carburetter, M-L round magneto, Dunlop heavy tyres, De Luxe pan saddle and cush drive. We manufacture four models, from £56, and can supply a handsome combination from £80 nett. Send 4d. stamps for a handsome illustration, measuring 15× 10in. and an interesting 32-page catalogue, together with riders' opinions and a list of notable successes. Deferred payments arranged with our London agents. All orders should be accompanied with a deposit of £5. Don't delay a moment; send for lists at once and be convinced. 2d. stamp for illustration only. The super machine of 1922 is the unexcelled De Luxe Barr and Stroud.—De Luxe Motors, 174, Corporation St., Birmingham. [7027

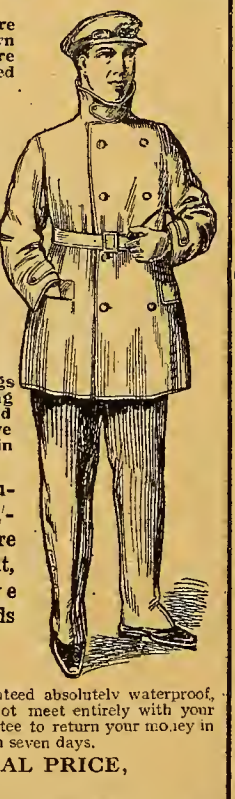
MANUFACTURERS' STOCK

MAKINKOT BRAND

TO BE CLEARED.

Fawn double texture, interlined rubber,

MOTOR SUITS



THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

THE "BABY" PHILIPSON

PATENT

AUTOMATIC GOVERNOR PULLEY AND GEAR COMBINED

for the

McKENZIE, etc.

By fitting the "BABY" PHILIPSON

to the McKENZIE or similar lightweight you obtain the lightest, speediest and simplest geared machine on the market, adding *only* 1¼ lbs. extra weight to your machine, and gives you a large variation of gears.

NUMEROUS GEAR VARIATIONS.

Watch the Pulley open as a gradient is reached and moreover watch it open exactly the correct amount.

Personal equation does not come in, *the Pulley thinks for you!*

No gear box friction. No grinding noises. No wheels or pinions to chew up. Increases life of engine.

More mileage per gallon of petrol.

Governor regulates the gear and belt grip automatically.

Maximum amount of driving energy is transmitted to road wheel.

Can be set at any desired top gear between the extreme limits of the pulley.

It simply takes the place of the ordinary pulley and flywheel and is fitted, without alteration, in a few minutes to the McKENZIE or similar lightweights.

Applications for "The Motor Cycle" and "The Autocar" policies are invited from South Wales Agents.

These should be addressed to the Cardiff Branch, the Manager of which will be pleased to give any information that may be desired.

Every assistance is rendered to agents in securing business, and the specialised organisation of the Company is placed at their disposal for the settlement of claims or difficulties.

N.B.—"The Motor Cycle" policy is authorised and approved by "The Motor Cycle," with which The Autocar Fire & Accident Insurance Company is closely associated. The conditions of the policy are complete and comprehensive, and the issuing Company enjoys a high reputation for generous and prompt settlement of claims, and for efficient service to policy-holders at all times.

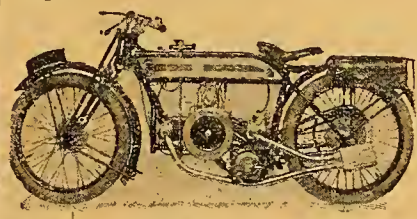
Of Interest to Speed Merchants.

One would naturally think that it is late in the season to think of getting a machine now for competition work, but that is where many make the mistake. **NOW IS THE TIME** to get the right machine for next year's events!

Have you ever considered that to get the very best out of any engine it is advantageous to run it a few thousand miles easily, so as to wear in each part thoroughly?

We are experts at tuning, and we are in a position to offer you the best and speediest, specially tuned.

The 3½ h.p. DOUGLAS Sports is the world's fastest 3½ h.p. twin and carries the distinction of being the first 3½ h.p. motor-cycle to exceed a speed of 100 m.p.h.



We are now booking orders for delivery in strict rotation of the 3½ h.p. Sports Douglas specially tuned and equipped under the personal supervision of our Mr. A. H. Alexander to the same specification as used by himself so successfully, with a guaranteed speed of 80 m.p.h.

Each machine supplied will be equipped as follows:—Special camshaft, special aluminium pistons, special valve springs and auxiliary rocker springs, 2 special Amac Carburettors with our own synchronised controls and special air box, complete engine specially assembled and lined up. Every machine specially tested on the road and supplied with a list of gears suitable for various purposes, with hints and tips, specially pertaining to this model.

List price of 3½ h.p. Sports Douglas - - -	£115 0
Extra for this special equipment and tuning - -	12 10
	£127 10

You will have a machine fit to compete with the best in any speed event. Our guarantee is 80 m.p.h., but that should easily be exceeded by any machine we supply, so equipped.

If you wish to shine in speed competitions get ahead of the other fellow and **Order your Douglas NOW—from ALEXANDER'S.** We may have to limit the number we can specially treat, and early booking is advisable.

ALEXANDER'S,
113-115, Lothian Road, EDINBURGH
(also at 272, Gt. Western Road, GLASGOW).

RIDE "AN ALEXANDER - TUNED" DOUGLAS AND SOAR TO SUCCESS.

The following is a copy of **unsolicited** letter dated July 29th, 1922, received from a user of the "BRAMPTON" Bi-Flex Spring Fork, resident in Derbyshire:—

"Dear Sirs,

"I have given your Forks which you sent me recently a very good test, and I can find nothing but praise for them, and we have some roads in Derbyshire, I can assure you. In fact, the whole machine could drop into some of the holes I have been over, and I took them at speed just to see how the Forks would act, and they were, as you say in your advertisement, First Class.

"Yours faithfully."

The advertisement referred to by the above user appeared in "The Motor Cycle" on July 6th, page v of the Supplement.

If your machine is not fitted with the "BRAMPTON" Bi-Flex Spring Fork, let us send you a measurement form and descriptive booklet illustrating models for Motor Cycles of 2¾ h.p. and upwards.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.

Yours faithfully,
JOHN O. GRIFFITS.

23, London Road,
Leicester.

Gentlemen,
I find the Budding you sent me very satisfactory, and consider it very good value for the money.

Yours faithfully,
J. CROSBY.

"Alma,"
Alexandra Road,
Cowes, I.O.W.

Dear Sirs,
I have received the Building in good condition and I consider it an excellent piece of workmanship and an exceptional bargain.

Yours faithfully,
L. G. CHINCHEN.

The A.C.U. Six Days' Trials.

GREAT public interest is being taken in the A.C.U. Six Days' Trials, which started on Monday and are now proceeding. As an event it is the biggest and most important of the year and is probably better supported in the matter of variety of makes and types if not in numbers than ever previously.

Compared with last year, of course, the trials are infinitely more interesting, not only because of the more representative entry, but because of the greater difficulties of the road portion of the test.

In 1920 the freak hill policy was carried to an excess; in 1921 there were few hills worth mentioning at all; this year a happy medium has been struck. Only a sound machine will survive the first five days of road testing without a loss of marks, but the route has been so chosen that mere luck plus highly-skilled driving will not give certain entrants any great advantage over others whose machines are actually quite as reliable. Then, on Saturday speed tests will be held at Brooklands, when also marks will be deducted for defective general condition and so forth. Silence is being tested aurally during the whole week.

Taken altogether, therefore, it will be seen that a very serious effort is being made to supply concentrated tests of all the features most desired by the ordinary motor cyclist. *En passant*, it may be mentioned that, although there are no really freak hills, one of last Monday's chief tests was ruled out of the 1920 trials as impossible. Thus has the motor cycle improved in the short space of two years. Could one ask for more conclusive proof of the value of trials generally?

As always, a certain number of new models and improvements destined to appear next year are in evidence among the competing machines. There is, however, a noticeable absence of what, for want of a better word, we must call "gadgets," fitted by the riders themselves. This is a good sign, for it means that nowadays a motor cycle is ready for a strenuous trip just as it is delivered. Insulating tape has been relegated to the tool-kit, where it properly belongs.

Again, the question of silence has received very close attention, and many are the new designs of exhaust arrangements in the trials. This, again, is all to the good of the man-in-the-street motor cyclist, who is becoming tired of being summoned for noise when riding a standard, unaltered motor cycle as turned out by the manufacturer. If the trials are any guide—and, usually, they are—this sort of thing will not be so common next year.

Few technical novelties are being tried out. It is noteworthy, however, that re-designed cylinders with deeper radiating fins are fitted to two well-known makes of the single-cylinder class. Another entirely new model also possesses a very excellently cooled cylinder head.

Generally speaking, there is, as we have said, little change in design—in many cases the competing machines are absolutely standard models—but straws that show how the wind blows are the increased popularity of the four-speed gear box and the decreased popularity of belt drive.

Every class of motor cycle is represented, but it would be futile to attempt to draw any definite conclusions from an analysis of types. At the same time, the fact that the big (600 c.c.-1,000 c.c.) sidecar heads the list numerically—thirty-seven against the twenty-eight 350 c.c. solo machines which come next—cannot be lightly passed over. That there are sixteen 750 c.c. solo mounts is also significant.

An index to the advertisements in this issue will be found on the page facing the back cover.

BY IXION

What It Costs to Tour.

I OFFER no direct contribution to this discussion, but throw a sidelight upon it. I have just returned from my annual holiday of 14 days, spent at the coast in one of the most expensive South Coast localities. Our party numbered 34—two adults and 32 boys. The total expenditure, inclusive of everything—food, firewood, rent of camping site, etc.—was about £50, a sum which covered several quite expensive sailing excursions, visits to the cinema during frightful weather, unlimited mosquito dope, and so forth. In other words, a fair-sized party can camp at a cost of 14s.-15s. per head per week. Transport cost us nothing, as we tramped to our venue, pulling our stuff in trek carts. The implication is that a party of motor cyclists—all members of the same club, for example—might do the Highlands or Cornwall on a trifling expenditure if they substituted camp kit for hotel bills. I lay a heavy emphasis on the word "*party*." A *couple* who go camping must occupy a good deal of the day with work—cooking, washing up, shopping, pitching and striking tents, digging refuse pits, and other jobs for which many people have no special stomach. But if a *party* of six or eight pals travel on these lines, the jobs are subdivided, and can be compressed by proper organisation into a very few minutes. To give an actual example, the above party arrived at a meadow about 4 p.m. on August 11th. At 4.40 p.m. the five carts were unloaded, nine tents erected and tidy pits dug, and tea (including four hot viands) had been served. By 5.30 p.m. all work for the evening was concluded, apart from the boiling of any hot drink required to wash down a cold supper. I wonder that some of our go-ahead clubs do not organise camping tours, and believe that the practice would grow by leaps and bounds if it were once started.

Windscreens and Legshields.

THE B.S.A. people were the first to test public opinion by demonstrating a motor cycle which offered its rider practically the same weather protection as an ordinary car; and prejudice was certainly excited by its somewhat bizarre appearance. Nevertheless, the idea is worth continued experiment and persevering propaganda. Now we get cold (as compared with car passengers) because we wear too much clothing in the bad months. Our bodies evaporate a good deal of moisture. If our clothing is sufficiently ventilated, this moisture condenses on our skins or in the clothes, and presently chills us to the bone. Given such wind screening as the special B.S.A. model furnishes, we could keep perfectly warm with clothes light enough to ventilate themselves properly. I, for one, intend to try my luck this autumn with a big windscreen and efficient legshields.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Sleeping Out.

CAMPING novices seldom understand how to keep themselves warm at night, and the early hours of a summer morning can be chilly to a degree. The three main points are as follow:—

(i.) Waterproof under you.

(ii.) No waterproof over the bed—rely on tent or bush for protection from rain; a mackintosh on the bed spells moisture by condensation inside the bed.

(iii.) More blankets under you than over you.

Not the Only Pebble.

THE other week I described how an amateur hotted up a sports single till his engine remonstrated by dissolving its piston into thin air. He is not the only pebble on the beach, for a Scot who supposes himself to be the anonymous hero of the tale describes a similar incident. He, too, bought a 6c m.p.h. single, and tuned it up to 80 m.p.h., chiefly by lightening the reciprocating parts, though he also ground off most of the base of his cylinder to raise the compression. He now wants to know what went. The mechanic who took the flange off the cylinder asserts roundly that the connecting rod stretched till the piston hit the top of the cylinder. But the earnest owner succeeded in finding the top of the cylinder several fields away, and it wasn't even dented. Next, please?

Occasional Comments.—

Not for Us?

I HAVE just vastly enjoyed a 600-mile scurry with a member of *The Autocar* staff on one of the new "Baby Fours," viz., a small car fitted with a water-cooled four-cylinder engine no larger than the big twins which figure on some motor cycles. It was a real revelation of the perfect engine. Car, occupants and luggage together weighed nearly three-quarters of a ton, yet that infantile power unit played cup and ball with its load just as our 1,000 c.c. twins toy with a small rider. Fifty-five m.p.h. on the flat was easily within its compass, and on the steepest hills the pace never sank below 20 m.p.h. The fuel consumption at high speed was always better than 40 m.p.g. There was no engine vibration, and the only noise was a level purr most pleasing to the ear. I fell to wondering why the four-cylinder motor bicycle engine lingers so sluggishly—there are a few on the market, but they hardly ever appear in competition, and are rare birds on the road compared to singles and twins.

Cost is no doubt a main deterrent. Presumably the 8h.p. Talbot car engine costs about as much as a mid-quality motor cycle complete. But I cannot help thinking that the four-cylinder only wants exploiting on motor cycles to achieve a vogue.

A Lot of Levises.

I SPENT part of last week hundreds of miles from London in a holiday resort. On my way back I met in the course of a single day along a single main road eight brand-new Levises, each obviously loaded up with full touring kit for the summer holiday. I also noted the facial expressions of the riders. Not so long ago the tourist who rode a baby two-stroke looked either apologetic or defiant when he met a 500 c.c. sports. Apologetic, as if to say "Sorry I can't run to a 'bus like yours!" Defiant, as one who would remark "It is you road-burners who do the sport so much harm!" But these 1922 Levisites were all cutting out a fast bat, and chucked me the genial grin of road comradeship; they knew that at the end of the day they would have covered just about as big a mileage as I should, and that their average pace would only be fractionally slower than my own. Yet some people fancy that the T.T. does no good.

THE RECENT INTERNATIONAL SIX DAYS TRIAL IN SWITZERLAND.

Regarded as the finest possible test for air-cooled engines, the long climbs to high altitudes form the chief reason why British manufacturers enter the International Trial. Valuable experience of a technical nature is obtained, but to the riders it is a holiday amid some of the finest scenery in the world. Competitors on the Klausen Pass.

Pictorial Echoes of the International Trial.

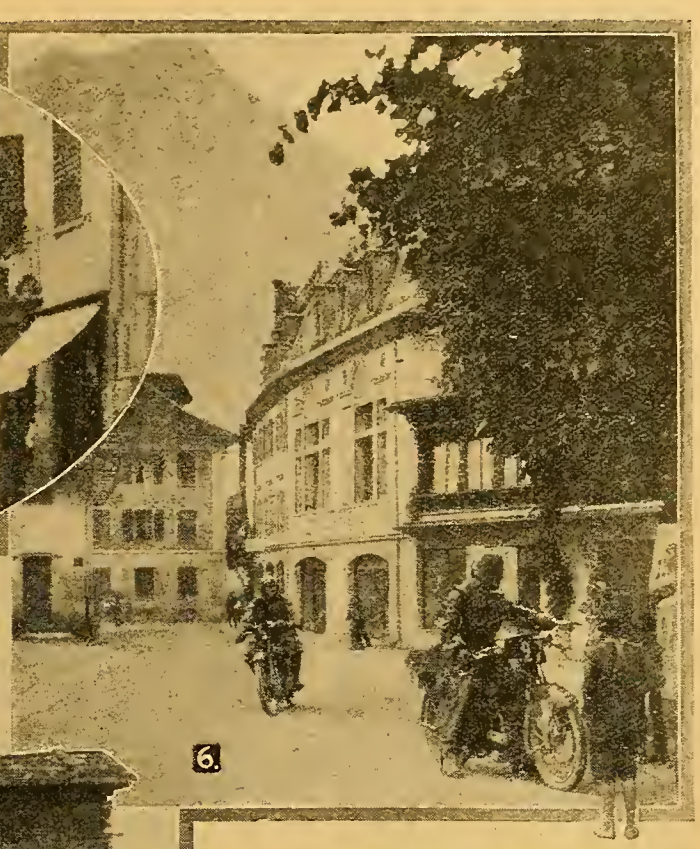
2.

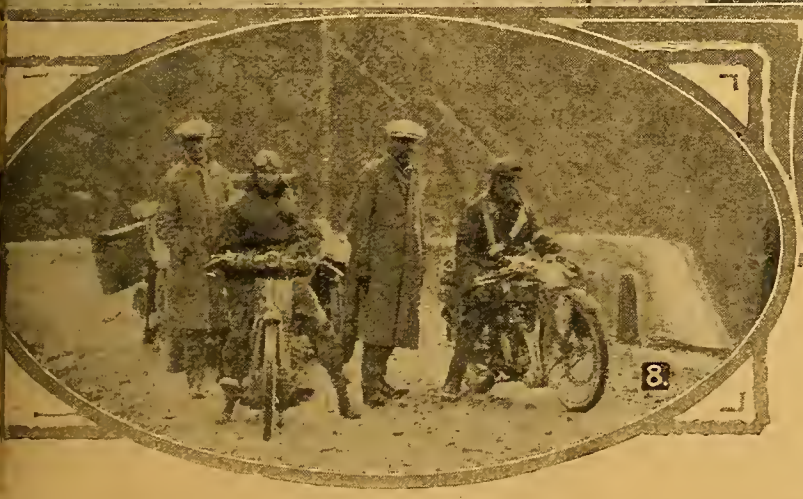
3.

4.

1 and 9. On the Col du Brüch. 2. Ascending the Grimsel Pass. 3. Windings of the St. Gothard road. This portion of the journey was made in pouring rain and the corners were extremely muddy and treacherous. 4. Eric Williams (A.J.S.) comfortably climbing the Côte de la Donzelle, which ascends abruptly (1 in 4) from the Rhône Valley. 5. A. Bennett (Sunbeam) in Brigue, which marks the beginning of the Simplon Pass. 6. Borzetti (348 Raleigh) in Altdorf. 7. Chalets in the lower portion of the Rhône Valley.



8. British motor cyclists near the summit of the St. Gothard. Standing behind them are Mr. T. W. Loughborough, General Secretary of the F.I.C.M., and Mr. W. H. Wells, who represented the U.S.A. at the F.I.C.M. Geneva conference.



Six Days among the Swiss Mountains

Robmann (Frera) taking a corner on the Klausen Pass.

Discussing the General Apathy of British Motor Cycle Manufacturers to Trials outside their own Country. Lessons that Might have been Learned.

LOOKING back on the 1922 International trial one's first thought is of regret—regret that British manufacturers, generally, have allowed a chance to slip by which may not occur again. It is not certain that Switzerland will run the event next year. And so an unrivalled opportunity of learning the lessons of motor cycling in high altitudes may well have been lost.

Great Britain has an undoubted supremacy in the motor cycle world, but she must not rest on her laurels, or she may find serious rivals on the Continent.

It has been suggested on more than one occasion that the trial, being so far away, scarcely justifies the expense, but there is a good answer to this. A well-known and popular English make, unknown in Switzerland previously, was entered last year and made a good performance; the result was that an order was given at the Olympic Show from a Swiss agent for 100 of these machines. Every motor cyclist is indirectly interested in overseas trade.

Where Delay Meant Disaster.

It was a trial in which delay meant disaster. In a country where the length of a hill may vary between five miles and practically ten times that amount, what chance has a rider to make up even for minutes lost in making an adjustment? Were it not for the corners, these long hills with gradients not worse than 1 in 10 could be climbed on top gear, but as it is, continuous use of second speed is demanded. Under these conditions *festina lente* must be the rider's motto; a generous throttle opening means trouble, as one of our riders, who suffered a partially seized engine through trying to make up time on a long hill, will agree. Lubrication becomes a real problem.

Efficient Swiss Brakes.

Brakes on British machines have improved, but they are still inferior to those used by the Swiss, which consist of enormous shoes applied to special rims.

One thing of importance has been definitely proved, and that is that on mountain roads motor cycles are vastly superior to cars. Very few British makes of cars would have survived this trial, and it is interesting to relate that the official cars, which were of French, Swiss and American manufacture, gave more trouble on the second day than all the motor cycles during the whole week.

Six Days among the Swiss Mountains.—

Ours was a splendid team, and technically it beat the Swiss people on their own ground. The three Britishers rode well, and if they could not command success they deserved it.

Mr. Loughborough, in his speech at the F.I.C.M. meeting following the trial, stated that he noticed a very marked improvement in the machines over those which took part last year, but evidently the Swiss had not expected to do quite so well as they had, and thought that the Donzelle hill "would just skim the cream off the milk"; but it was a failure. The performance of the British riders and, save for the accidents to the one sidecar, of the Swedes was as good as that of the Swiss.

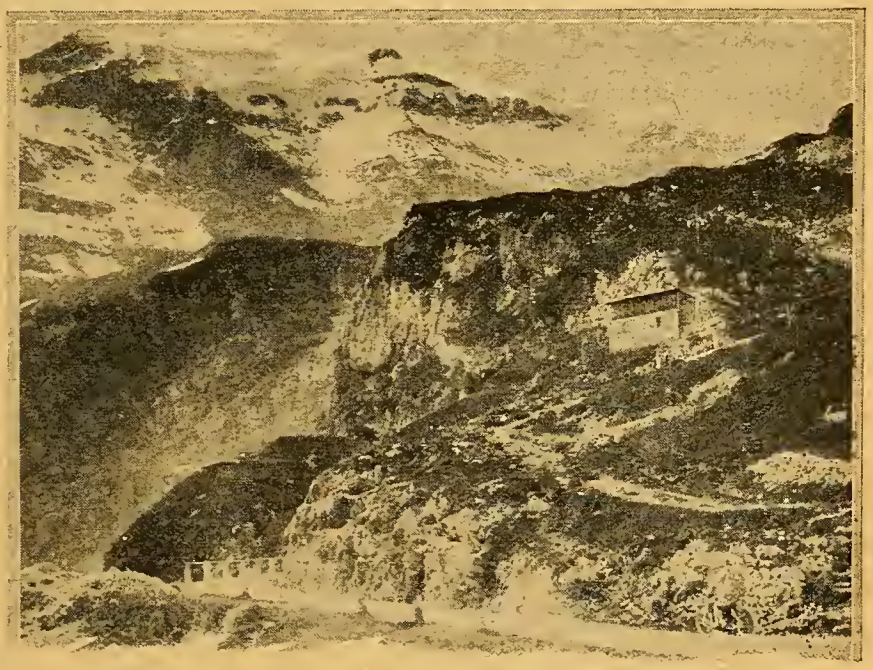
Next Year's Event.

He made the following two suggestions for the future event: the abolition of fixed controls outside which men waited and then arrived to time, and in their stead more secret controls with a larger margin both ways; the abolition of the examination of the machines at the end of the trial, which the A.C.U. had always found a source of trouble, and the substitution of a long high-speed test.

A word or two about conditions in Switzerland may not be out of place. There are plenty of motor cycles, and there would be more if traffic regulations were more reasonable. Certain cantons which forbid cars on certain roads allow motor cycles to use them, while others forbid all motor traffic. Motoring on Sunday is almost universally prohibited, and the result is that 40,000 francs is spent by Swiss motorists in France each week end; and at one Customs house 500 vehicles line up in a queue every Sabbath. This may be rather outside the scope of a review of the recent trial, but it is introduced with the idea of showing that, despite the Gilbertian traffic regulations of the country, motor cycling is in a fairly prosperous state. Also things are due to improve, for a new law placing motor traffic under Federal instead of Cantonal control is about to be passed. One of the results, incidentally, of the restriction of motor traffic is that the roads are mostly free of potholes and in excellent condition, and that the country is ripe for a motor cycling boom. When that occurs there will be a considerable demand for motor cycles of sturdy, efficient design such as Britain builds so well.

As a Touring Ground.

Even to-day, if the regulations are observed, a very pleasant holiday may be spent in the country, of which every section has its peculiar beauty, and, if discretion is exercised, at a really reasonable cost. Few people realise that Geneva is but 300 miles from Paris and very little farther from the French coast than London is from Edinburgh.



Wonderful snow mountains overshadow the road near the summit of the Klausen.

POSED PILLION PERILS.

UNINTENTIONALLY amusing photographs to show the alleged danger of pillion-riding were a feature of a recent issue of a Sunday illustrated newspaper.

Harmful Propaganda.

We might well pass them over with but a chuckle at their unnatural and absurd poses were it not that they will undoubtedly do harm to motor cycling generally.

The average reader of the newspaper in question probably knows nothing at all about motor cycles; further, he usually has a firm belief that the camera cannot lie. Subconsciously, therefore, he begins to believe that pillion-riding is as dangerous as it would be if everyone practised the gymnastics of the riders in the photographs.

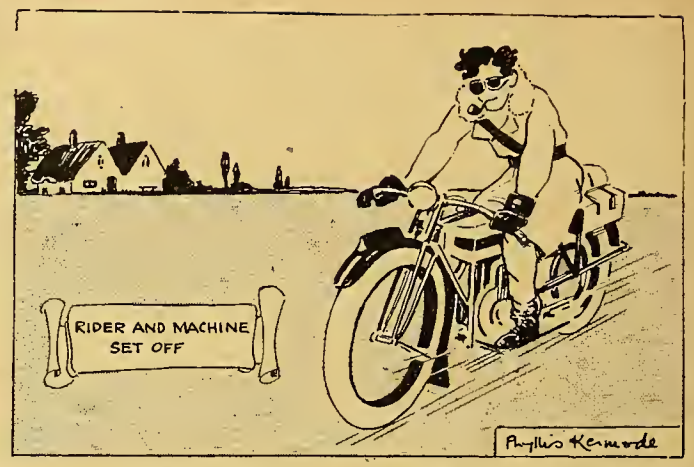
There is no reason for any of their movements. They ride up kerbstones; they drive into stationary motor cars; they steer between two stationary vehicles while the lady passenger leans over in an endeavour to give an impression of danger; they wobble horribly—all on a well-known touring big twin motor cycle which normally is hardly ever used without a sidecar!

To the informed reader the whole series provides an excellent contradiction of the view that pillion-riding is dangerous. *Every one of the "accidents" depicted would just as surely have been an accident had there been no pillion rider there at all.*

AN UNINTENTIONAL TOUR.

Holiday-making in England, Scotland and Wales, incidentally including 1,600 miles on the road.

Illustrated by Miss PHYLLIS KERMODE.



ON a recent Sunday, chance took me down to Brighton for the day. I had been before, but never until then had I realised how thoroughly unpleasant these crowded seaside resorts can be to the man who loves the countryside.

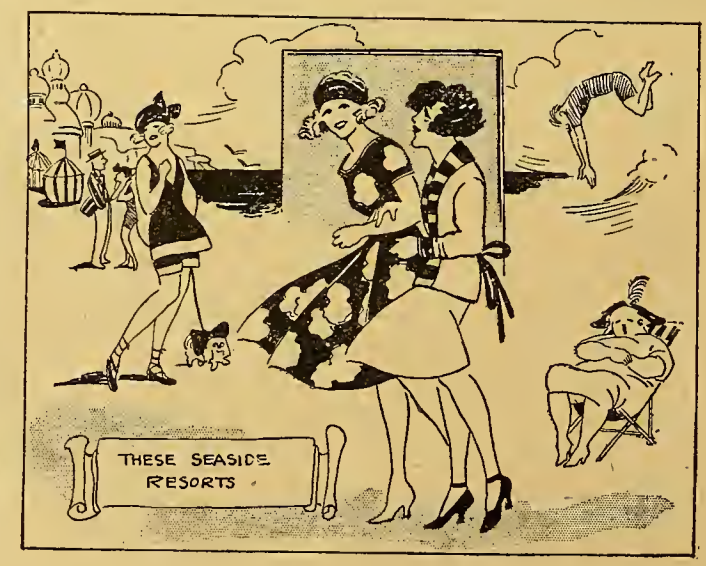
Thousands of holiday-makers aimlessly paraded the piers, the front, and the beach, looking hot, dusty, and, very often, unhappy. Some—wiser—occupied massed battalions of deck-chairs, but everywhere it was crowds, crowds, and more crowds. There seemed to be more people than pebbles on the beach, and even the sea—the sole justification for visiting the place—had a camouflaged air of artificiality.

Yet a holiday in Brighton, or Blackpool, or anywhere else of the kind, cannot be inexpensive. And one can obtain much better vacation value for money—if one is a motor cyclist.

Touring and Travelling.

As I write, my Bonniksen confesses to 1,600 miles, ticked off in England, Scotland, and Wales during the last fortnight, and every one of them enjoyable. Quite a small proportion, however, is touring mileage in the generally recognised sense of the adjective. As a matter of fact, my taste for touring has been spoilt by previous acquaintanceship with almost all the beauty haunts of Great Britain, and my original intention was to cram as much golf into each twenty-four hours as the long summer days would allow. This programme, too, despite the speedometer reading, was adhered to.

The initial journey from town to Coventry to take over my mount—a new one—was made by train. This fact is only interesting because it revealed that the luggage and clothing stowed and worn by the motor cyclist without trouble may be extremely bulky and awkward when lugged about by hand. The solo motor cycle is supposed to have very restricted facilities for luggage accommodation; let those who hold this view unstrap their holiday kit and clothing and become temporary pedestrians!



Clothing, by the way, may make or mar a long motor cycle journey. In my case I wore, with every satisfaction, an oilskin interlined trench coat underneath a long leather coat, and a pair of Hutchinson boots when necessary. This may sound more suitable for a London-Exeter run, but in my experience it is the ideal all-the-year-round garb for the hard rider. A pair of flannel trousers in the carrier bag was always ready to substitute riding breeches and stockings at times when the 'bus was not in use, and the vexed problem of headgear was solved by omitting it altogether, except for a pair of light, tinted Triplex goggles. One solitary strap, carefully located, efficiciently retained a loosely packed bag and the waders on the carriers, and maps, small kit—including toothpaste!—cash for roadside supplies of fuel, spare bulbs, cigarettes, tobacco, and a few other often required or fragile *etceteras*, were carried in an ex-W.D. haversack.

Northward Bound.

Thus equipped, rider and machine set off after lunch on Saturday for the Great North Road and Scotland. At first it was an irritating ride. Along that inviting speedway from Leicester to Newark, Doncaster, Wetherby, and Scotch Corner, it required considerable patience to keep the pace down to 25 m.p.h., but for the first 250 miles or so this was done. Never once did the needle reach "30," yet a late halt at Brough showed that the average for 200 miles had been 22 m.p.h. This may astonish those who talk of the difficulty of averaging 20 m.p.h. on a long run.

Next morning it was decided that the engine could stand much more throttle. Inverness was over 300 miles away,

and my ultimate destination 25 miles further on. Suffice to say, therefore, that I reached my objective at 8.30 p.m. after a glorious no-trouble run, apart from five or six fuel replenishments and a quick lunch and quicker tea, absolutely non-stop. Runaway Fodens would not drag from me the exact hour I started from Brough. Nothing distorted.

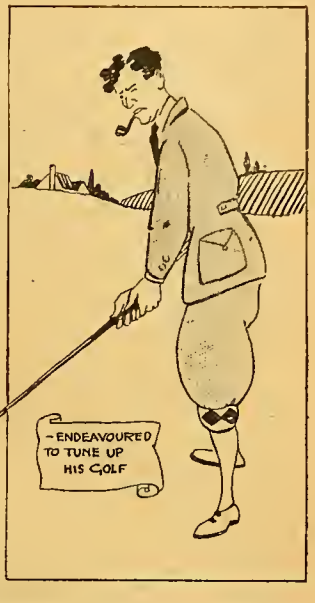
During the following week a pedometer would almost certainly have registered a greater mileage than the speedometer, the faithful 'bus being relegated to hack-work while its rider endeavoured to tune up his golf.

A Week-end in the saddle.

But from Saturday evening until Monday afternoon it came into its own again—in the North of Scotland the only really permissible Sabbath recreation is walking—and totalled up another 300 miles in a visit to friends near St. Andrews. By this time I was becoming quite bored with the road across the Grampians, which incidentally is as rough and out of condition as ever I have known it. For those to whom the Highlands are unknown, however, there are ample scenic compensations both on the spot and further on.

More golf ensued, and then, after eighteen holes on Tuesday morning in a minor gale, it was very suddenly decided to go and see the car T.T. races in the Isle of Man on the following Thursday. With a little rush work there would be, it was judged, just time to catch a night boat on Wednesday evening.

By a curious coincidence, I left Inverness at 3.50 p.m., which is also when the mail train for the South makes a start; this livened up the ride to Perth very considerably, for a Highland railway train makes no great speed for the first 50 miles, which is mostly hard climbing. There was quite an interesting train *versus* motor cycle duel. Of course, I lost on corners, but gained on the long hills, and all the way to Drumochter the train was kept in view wherever the road followed the iron trail. Not until a mile or two from the summit did I gain an appreciable lead, and, very soon after, the train came whizzing past once more at "55," a wave from the driver seeming to invite a continuation of the contest. The challenge was not accepted.



A Change of Plans.

That evening I went on only as long as I dared in a country where hotels are not eager to supply food after 9 o'clock or so. Kendal saw a stop for lunch on the following day. This halt is notable for two reasons: in the first place, the County Hotel there supplied, for the very modest sum of 3s. 6d., the most excellent meal it has ever been my lot to enjoy on the road; secondly, I decided—for a very adequate reason that need not be detailed here—not to visit the Isle of Man after all. (No! I am not a bad sailor.)

Turning northward once more for Windermere, Ambleside, and the Lakes, I discovered at least one beauty spot which I had not previously visited—Borrowdale and the road along the *west* side of Derwentwater. There one reaches a high altitude right alongside the lake, and the magnificent panorama will cause the most hardened road burner to halt for a moment. But vivid impressions of Scotland made the beauties of the Lake District seem tame; yet there was insufficient real contrast, such as Surrey or Warwickshire might have supplied, to make the change enjoyable.

A move was made to North Wales.

On Thursday, however, much rain caused a very prolonged lunch stop in Liverpool, and signs of more later in the day indicated a night's halt at Wrexham, after an aimless ramble totalling only some 150 miles. Truth to tell, my decision to re-visit the Welsh passes was backed by very little desire; the weather conditions, too, were discouraging.

The busy little Denbighshire town provided another pleasant surprise in the matter of hotel accommodation. Usually I rely on the A.A. or

An Unintentional Tour.—

R.A.C. signs when choosing where to stay, but in this case none were visible, and the next best—or perhaps the better—method of asking a policeman was employed. He pointed to a building of singularly unimposing exterior appearance, which was prominently labelled the "Wynnstay Arms." Doubting at first, I entered, I saw, I was conquered.

Inside were all the comforts of a London hotel—in the bedrooms, constant hot water, electric light with many switches, and labour-saving terra-cotta floors comfortably strewn with rugs; furthermore, there was excellent catering, service, and cleanliness at a moderate figure. Moral: Do not judge an hotel on its outside appearance.

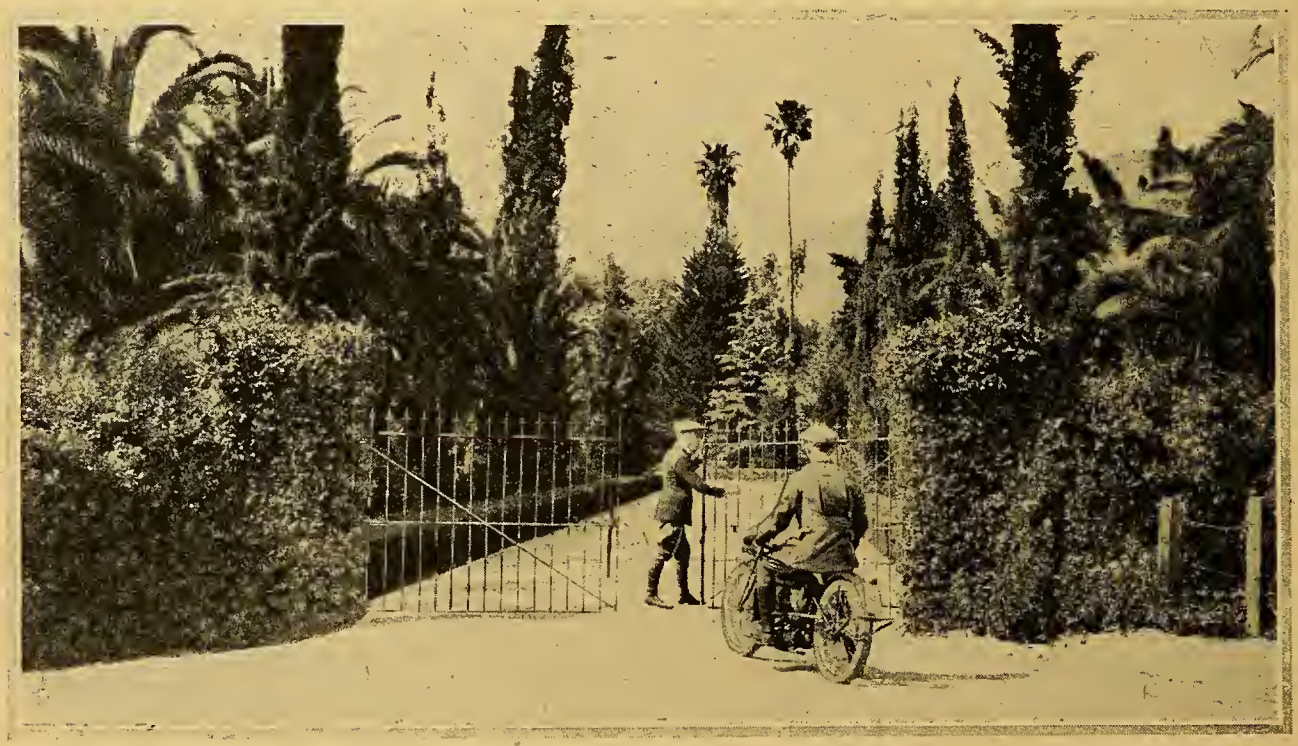
Friday—my last day on the road—contained another lazy run. Joining Watling Street at Shrewsbury, I experienced my usual difficulty in leaving it successfully for Coleshill and Coventry. The area enclosed by a circle having the Lichfield and Sutton Coldfield road as its diameter contains a more confusing maze of (apparently) main road junctions than anywhere else in the world!

Almost, I forgot my mount, which is a good sign, for too often, in the past, descriptions of holiday ramblings awheel tended to become purely narratives of mechanical repairs and adjustments.

The machine was an o.h.v. Triumph. It behaved in the way one expects a Triumph to behave—faultlessly. With the speedometer at 1,580 miles on Watling Street, it was let out to see how it had kept its tune for such a rapidly totalled mileage without decoking—"56 m.p.h." was the answer.

The plug was removed three times, and the valve push rods were adjusted on, I think, four occasions. Brake and rear chain received attention once each. That was all.

Fuel consumption for the whole trip averaged the extraordinary figure of 90-95 m.p.g. My record day's run, the first Sunday's 330 miles, failed to fatigue me. "Hands off steering" and 3in. tyres will be essentials on all my mounts of the future. A McL.

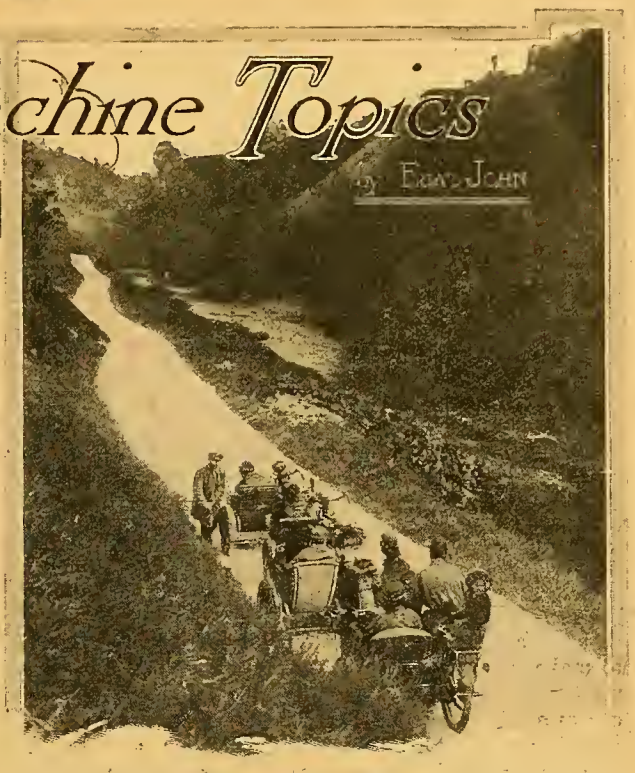


An ideal motor cycling country—California, the land of perpetual spring. These Los Angeles boys prefer a Cleveland two-stroke to their father's "twin-six" limousine.

MOTOR SPIRIT PRICES IN AMERICA.

IN the House of Commons recently, replying to Major Glyn, Sir P. Lloyd-Greame, Secretary to the Overseas Trade Dept., said that according to information he had obtained from trade and other sources, the price, at refineries in Philadelphia, U.S.A., of motor spirit, of a grade distinctly inferior to No. 3 motor spirit, was, on July 1st this year, 20 cents per gallon. The price to consumers in New York was 26 cents per gallon. In July, 1914, the corresponding prices were 11 cents and 15 cents. Those prices were for bulk supplies, and a standard gallon in the United States was five-sixths of a British imperial gallon. Most of the motor spirit imported into this country from the United States was carried in the oil companies' own tank steamers, and he was unable to supply information as to the cost of transport.

Passenger Machine Topics



A Perfect Day's Run. Riding in a Deluge. The Cost of Touring.

THE morning: a fine one in late August, calm, with just a touch of coolness in the air, and a golden glow in the misty east. We packed sandwiches in a porcelain-lined box—sandwiches from the middle of a Cumberland ham—lettuce and tomatoes. We also took a basket of greengage plums. Two fat Bakewell tarts were also accommodated, and two big flasks containing tea and coffee.

The tyres of all three wheels were perfect, and the spare was *not* a groggy cast off; chains were perfect, and there was no *hoping* we should not have trouble, for it was no perfunctory overhaul the machine had had the night before. Such was the start of a perfect day's sidecarring.

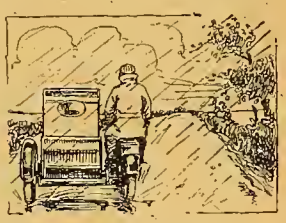
The journey: over roads without pot-holes and traffic, with an engine pulling with a clean exhaust note. Ten, twenty, thirty, forty miles, and then the sea-air was felt; the ozone, carried across the flats, met us as we rushed towards the shore. We inhaled big breaths of the tonic breeze, and glorified the sidecar.

The objective: seagulls skimmed over the desert of gleaming yellow sand before us; the gentle hiss of breakers reached us as we sat in the grey grass on the dunes and consumed ham and greengages. We bathed and decided in the future to shun the city and live "the simple life," then slowly packed up and prepared to depart. In the cool evening the engine sang sweetly, we met no disconsolates on the roadside with break-downs, no hare attempted to jump the sidecar, and we arrived home within a few minutes of our appointed time—a gorgeous, refreshing run on a rare day when the pleasures of the sidecar were enjoyed to the very limit. A tale lacking in incident, maybe, but such days I sorrily admit are only too rare.

IS it possible to keep perfectly dry whilst driving for five or six hours in a continuous downpour? I have my doubts. Up to the present everything I have tried allows wet to percolate either at the crook of the elbow or at the shoulder seams, and in spite of waders and a waterproof apron underneath the oilskin, rain will in some mysterious way find its way off the tank on to the saddle and also drive in between the buttons of the coat.

Some of my colleagues have been just as unfortunate as I have; others vouch that they keep perfectly dry in a deluge.

One rider, who has covered big mileage on powerful outfits wears ordinary waders and an oversized rubber coat, never complains. Another, who has covered the Scottish "Six Days" several times, wore last time a thin oilskin, a new and stout leather coat on top, and Hutchinson waders. Yet the Scottish "showers" penetrated the leather and seams of the oilskin.

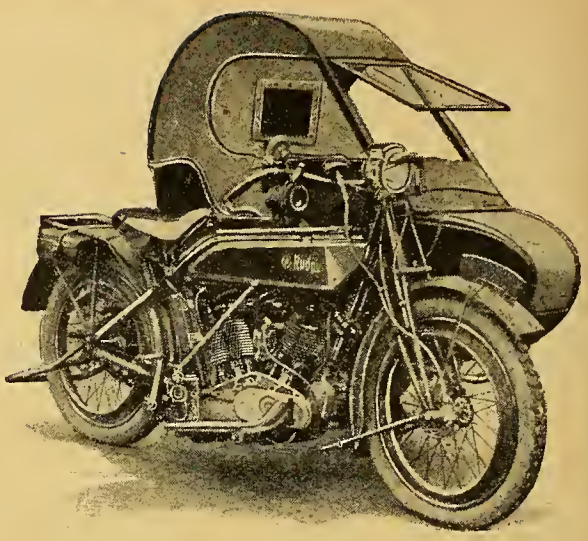


I am inclined to get specially made a pair of waders cut in a similar manner to what I believe are called American overalls, such as are used by mechanics. There are, of course, good overalls on the market made with seats, but they are not comparable with rubber waders—and were never meant to be—when it comes to riding in deluges. The special waders, together with a good rubber coat, with a light poncho on top, should enable one to keep dry and warm. Granted you might be suffocated, but those ominous and "goosey" shivers often experienced after a thorough soaking on the saddle would be avoided. Personally I would rather be suffocated than chilled to death.

Passenger Machine Topics.—

I DO not think quite sufficient attention is being displayed by makers in luggage accommodation. I know this is a statement that may be immediately refuted. The many lovely bulbous back sidecars capable of holding a can of petrol out of sight may be pointed out as exemplifying the attention that has been given to the subject. These bulbous backs are very nice; they add to the symmetrical appearance of a body, and are useful for oddments and also for carrying petrol when in Sutherland and Ross. But when it comes to carrying a couple of portmanteaux or a big package, one is often in a quandary.

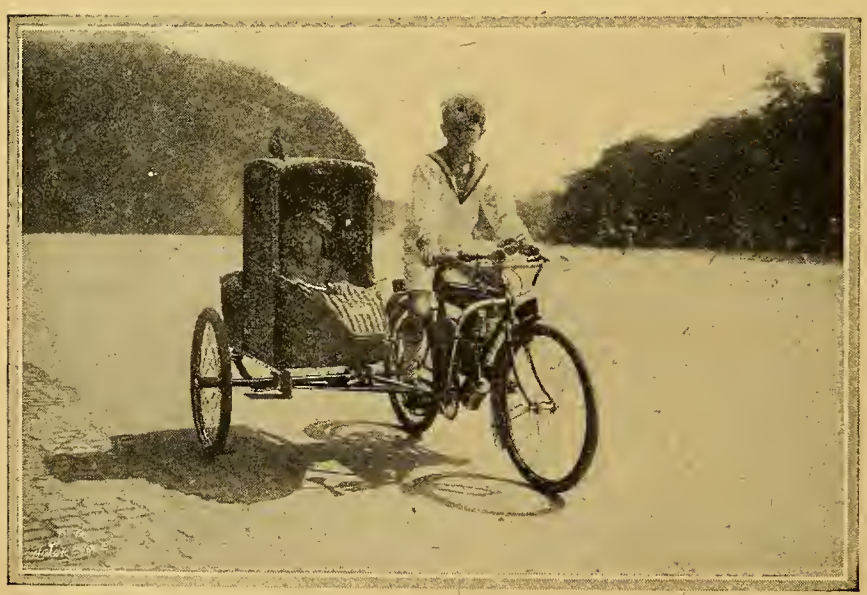
There is ample room for a display of ingenuity in arranging a grid that will take two cases of ample area without giving the outfit a clumsy appearance. These cases might fit quite independently into a permanent outer case of fibre fixed on to the special grid. Between the machine and the sidecar a similar idea might be adopted, for there is any amount of wasted space.



How a Coventry owner of a Rudge outfit, Mr. Biddle, solved the problem of weather protection for his passenger.

'WHAT it costs to tour!" A subject this; there are sufficient potentialities in those five words to make a book. Several of the many letters on this matter in recent issues are more than interesting; they are astonishing as showing what can be done on comparatively little expenditure. I say comparatively. "Experienced," for instance (lucky man with 30 days' respite from London), says he took a 30-days' holiday from London to Scotland, Lake District, Wales, and Bournemouth, for 30s. per day, which included accommodation for three persons and cost of petrol and amusement. "W. B.," on a 15-days' tour, averaged 13s. 2d. per day for bed and breakfast (for two persons). And then what can be said of "XF 3039," who, delving about Dorset, finds—"a delightful old-fashioned inn in gorgeous surroundings where we got plenty of wholesome country fare (home-cured bacon, new-laid eggs, home-made butter, etc.), and the bill for supper, bed, and breakfast was only 13s." The very name of the inn, "The Golden Heart," is intriguing. "XF3039" did not mention the honeysuckle and new-mown hay, the old beams and pretty waiting-maids, but then one can't expect everything for 13s.!

IT is obvious, then, that touring is not the expensive pastime some would have us believe. Discrimination has to be used; if one is too lazy to enquire for reasonably-priced accommodation, then the indifference has to be paid for. There certainly can be no more attractive holiday than a sidecar tour, putting up just where one desires, stopping as long as fancy dictates, and continuing the journey at one's own sweet time. Such a trip is blissful after existence under arbitrary time limits.

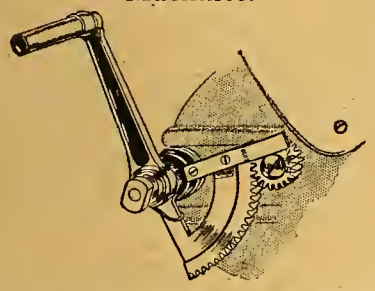


The limit in sidecar outfits—a 10 year old French enthusiast and his 9 year old passenger.

THE Paris correspondent of *The Motor Cycle* writes that in France no person is allowed to ride a motor cycle, or indeed to handle any kind of mechanically propelled vehicle, until he has passed a practical and theoretical Government examination. At present no age limit exists. Only 10 years of age. Paul Goujon, I am told, passed a very severe examination which gave him the right to travel over all the highways of France on a motor cycle. Paul's machine is built to his requirements, for it is a motor assisted bicycle to which is attached a closed basket-work sidecar.

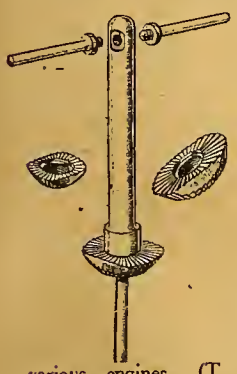
AMONG THE ACCESSORIES

Easier Starting on Ex-R.A.F. Machines.



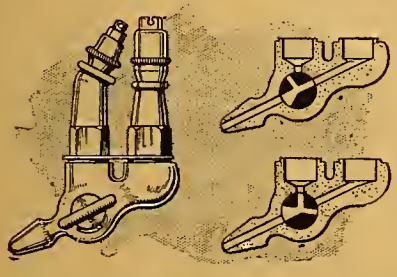
Ex-W.D. and other old P. & M. machines may be modernised by fitting the kick-starter made by the Motor Cycle Accessories Co., 43a, New Cross Road, London, S.E.

Valve Seat Cutters.



If the valve seating is badly pitted, this Midland device will prove useful. Although mainly for garage use, it should also attract the competition rider, for cutters are supplied to suit various engines. (T. H. Hodgson & Co., Ltd., Sentinel Steel Works, Neepsend, Sheffield.)

Dimming Acetylene Lamps.

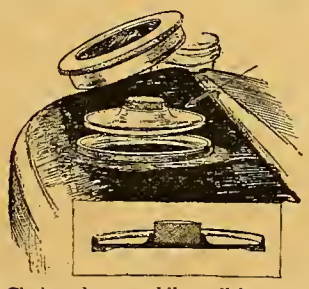


Intended to allow an acetylene lamp to be dimmed when the machine is stationary, the Cotton dimmer makes use of a three-way tap in conjunction with two burners. At present it fits P. and H. lamps only. (F. C. Cotton, 23, Wellington Street, Lincoln.)

Air Leak Detection Simplified.

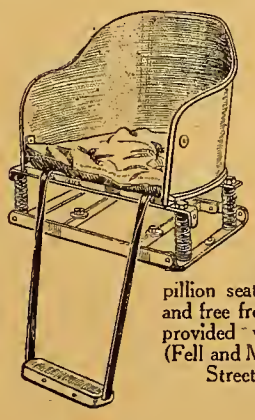
By means of cigarette smoke pumped into the cylinder by the Gordon patented device, air leaks, suspected or otherwise, may easily be located. It is particularly useful in detecting the cause of uneven firing on twin cylinder engines. (R. J. Gordon, 5, Landsdowne Square, Weymouth.)

Leak Proof Filler Cap.



Eli Clarke, the erstwhile well-known competition rider, has introduced a device to prevent petrol splashing out of over-full tanks; it consists of an aluminium disc, a felt washer and a felt pad by which the existing cap holds the new member in position. (E. Clarke, Cheltenham Road, Bristol.)

Simple Pillion Seat.



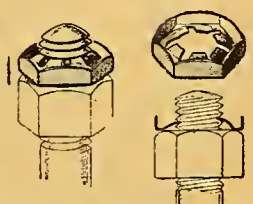
Suitable for either child or adult, the Fell and Mitchell pillion seat is light, simple and free from rattles and is provided with a footrest. (Fell and Mitchell, 24, Soho Street, Liverpool.)

Plug Cleaning Made Easy.

Screwed into the Westminster device, a sparking plug may be rapidly cleaned by a little vigorous shaking, loose steel wires and petrol combining to remove all carbon

deposit. If required, two plugs may be cleaned at once, one at either end. (The Westminster Trading Company, St. Stephen's House, Victoria Embankment, London, S.W.1.)

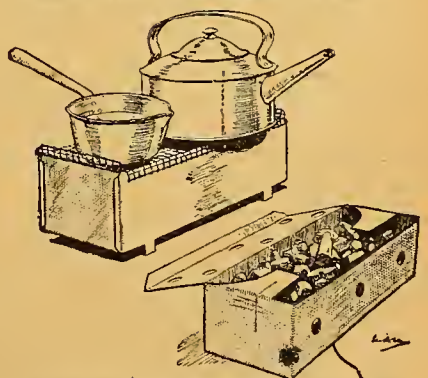
Ingenious Locking Washer.



Placed above the nut instead of underneath, the Palnut safety lock washer, which screws in the core of the thread, tends to flatten out and thereby grips more tightly as the main nut is unscrewed. 2s. 6d. per assorted box. (The Palnut Co., Ltd., 6, Great St. Helens, London, E.C.3.)

Slow Combustion Picnic Stove.

Wayside picnics, or even more elaborate meals, are simplified by the Hardy stove which burns a special charcoal slow combustion fuel, a card-board box-full, as



illustrated, lasting nearly two hours. With three fuel replenishments, the price is 13s., spare heating units being 9d. each. (The Pitt Commutator Co., Grenville House, Brunswick Square, London, W.C.2.)

The McKenzie Lightweight.

SPECIFICATION.

ENGINE: Hobart two-stroke; 60 × 60 mm., 170 c.c.
LUBRICATION: Petroil.
CARBURETTER: Vici, one lever.
TRANSMISSION: ⅝ in. rubber belt, fixed gear.
TYRES: 26 × 1¾ in.
BRAKES: Front, rim; rear, coaster hub.
MAGNETO: Fellows.
SPRINGING: Frame, rigid; front forks, Hobart spring.
PRICE: £27 6s. (at Coventry works).

THERE seems little doubt as to the rapidly increasing popularity of the ultra-lightweight motor cycle, and we therefore welcomed the opportunity of testing one of the most popular models in this class of machine—the 170 c.c. McKenzie.

Obviously this mount has been planned with considerable care and with an attention to detail which goes far to make it as satisfactory on the road as it proved to be.

In construction and driving it is simplicity itself, and anyone with even the most elementary knowledge of motor cycles need not be afraid of taking over the machine. The engine has a cubical capacity of 170 c.c. and is of the two-stroke type, giving very smooth running and all the speed that is required. Transmission is by a direct belt drive to a large drum on the near side of the back wheel from a pulley behind the outside flywheel on the engine shaft.

A pleasing feature of the little mount is the willingness and astonishing flexibility of the engine.

Petroil Lubrication.

The carburetter is a Vici of the single lever type, and lubrication is effected by the petroil system. The petrol filler cap is fitted with an oil measure, and spare oil is carried in the oil tank in front of the petrol container in the usual manner, but the underside of the oil tank possesses a release tap, thus enabling oil to be drained off as required. The mixture in this case should be five measures of oil to every half gallon of petrol. The tank capacities are about three-quarters of a gallon of petrol and one quart of oil.

To try it under the conditions which the average purchaser almost certainly will use it, we decided to subject it to a few tests in thick traffic, tests from which it emerged with flying colours. A few turns of the pedals were sufficient to start the engine, and after that, barring accidents in the way of traffic blocks and other inevitable stops, it was not found necessary to use the pedals for any purpose other than as footrests. With very little practice "traffic-dodging" may be reduced to a fine art with a McKenzie, as was soon discovered. The ease of manipulation and eagerness of the engine enable one to wriggle through openings which would be impossible to a less lively machine.

Speeds from 8 to 20 m.p.h.

Satisfied that the machine was capable of doing all that was required of it in traffic, we then tried the other extreme with equally satisfactory results.

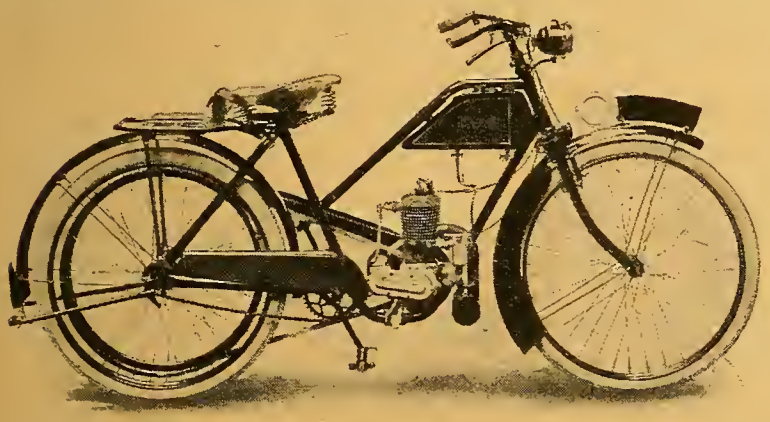
It stood up to reasonably fast work with apparent ease, and the engine appeared to be quite free from overheating. Of course it must not be imagined that great speeds can be obtained with a machine of this kind. The speed on the level is not much above 20 m.p.h., but as the machine is so light and convenient to handle, any speed greater than this would tend to have evil effects on what can only be described as an excellent little frame; the minimum speed with the engine firing properly is somewhere in the region of 8 m.p.h.

Road Tests of New Models.—

Braking is carried out by a hand-operated rim brake on the front wheel and a singularly efficient rear brake of the back-pedalling type. We took the opportunity of testing these brakes somewhat severely and were unable to find any fault with them. They do their work well.

A certain amount of vibration is noticeable when travelling at the higher speeds, but this is almost unavoidable in machines built on such very light and simple lines; the front forks absorb all average road shock quite satisfactorily, and the saddle is comfortably sprung.

We were unable to verify the efficiency of the mud-guarding arrangements owing to an unusual spell of fine weather during the tests, but as far as can be judged from appearances it should be quite good.



The latest McKenzie model—with a lower frame—an alternative to the now popular standard production.

The upper section of the driving belt is protected by a light metal shield which obviates any danger of one's clothes coming in contact with the belt and also protects it to a certain extent from the wet.

The frame is strongly built, the front down tube being continued in a loop under the crank case for extra security, and the engine itself is bolted to the frame in two places.

Suitable for Riders of both Sexes.

The advantage of the McKenzie is that the frame construction makes it suitable to be ridden with almost equal ease by either sex, whilst mechanical considerations need terrify nobody. It takes up no more room than an ordinary pedal bicycle and is really remarkably light.

Altogether we were very well pleased with the performance of this machine, whether used for slow and sometimes difficult work in London traffic or for the easier and more enjoyable pastime of open country riding, reliability rather than speed, of course, being the order of the day.

The large number of McKenzies now on the road, between 1,500 and 1,600, we are informed, testifies as to its all-round utility. Recently an alternative model with a slightly lower saddle position was introduced and is intended for those who find the original model a little too high. With this latest model it is possible even for short riders to sit on the saddle with both feet firmly on the ground, a point which gives the nervous rider increased confidence.

INSURANCE PROBLEMS.

A Feature in which Insurance Questions are Answered and Discussed.

The Bewildering Increase of Premiums.

Mr. L. Desoutter embodies a number of queries in the one letter: "In 1919 I took out a policy with a certain company for a 350 c.c. twin Enfield worth £75; it gave me complete cover, including pillion riding, and was insured whilst anybody drove it. I paid the first 50s. in the damages section. The premium was under £3. This year I wished to take out the same kind of policy, with the same people, offering the same cover for a 550 c.c. motor cycle worth £50; I was informed that the premium would be £13. I had no claim during the previous policy of 1919, but the company refused to give me a rebate of 15 per cent. because the insurance had not been continuous. To my disgust I find that all insurance companies require the same premium. Have they made a combine? For there seems to be no competition left. And why is it that premiums have gone up since 1919, when everything else—labour, cost of living, etc., has dropped considerably? My brother has got a two-seater light car worth £400; his comprehensive policy only costs him about £12. I have driven motor cycles for the last ten years, always with a pillion seat, and have never had an accident or put in a claim against any company, so you understand why I consider the above premiums exorbitant.

Can you tell me of a good insurance company that will give me the cover I require at a reasonable figure? Why should 50 per cent. extra be claimed for addition rider? The risk is not double, as the machine cannot be ridden by two persons at the same time.

The reason for the very wide difference between the premium you have previously paid and the present rate appears to be that for some time the insurance companies carried on motor cycle insurance business at a considerable loss. Insurance companies keep statistics with regard to the various classes of risk and have evidently found the increased premium necessary for pillion riding and risks where more than one person drives. Whilst there may be small variations in the premiums charged by various companies, we do not know of one that would be willing, at the present time, to issue policies at the figure you apparently require.

* * * *

Fire Caused by Collision.

Mr. F. Smurthwaite, Sales Manager of Messrs. C. Binks (1920), Ltd., Manchester, propounds an interesting question: "Assuming one has a machine insured against fire, theft, and third party risks, what would be the position if an accident, say a collision, damaged the petrol tank, thus causing a fire? Would the insurance company consider the damage due to 'accidental damage or fire'?"

In this case the damage caused by the fire would certainly be indemnified. The cause of the fire would not affect the case; but very possibly a reduction would be made for the damage to the machine in the collision.

INTERNATIONAL COMPETITION RULES.

F.I.C.M. Conference at Geneva makes Minor Alterations to Several Regulations. Touring Facilities Discussed.

NO less than nine countries were represented at the summer congress of the F.I.C.M., which was held immediately after the conclusion of the International Trial. Delegates were present from Great Britain, Italy, Switzerland, Belgium, Holland, France, Denmark, Sweden and the United States.

The Spanish Tangle.

Affairs in Spain appeared to be in a somewhat tangled condition. The Royal Spanish Motor Cycle Club (*Real Moto-Club d'España*) is really the governing body, but the Royal Moto-Club of Cataluña is the more active motor cycle body, and is fully qualified to take the lead. For some years the *Real Moto-Club d'España* has been promising to put its house in order, but it has done nothing. It is therefore proposed to give it one month to give a satisfactory reply to the F.I.C.M., and failing that to exclude it from the Federation and to appoint the Royal Moto-Club of Cataluña in its place. At the same time it was resolved to put the full facts of the case before the patron of the club, H.M. The King of Spain.

Touring Facilities.

The General Secretary reported that he had received communications concerning improved touring facilities from Belgium, Denmark and Holland, and he presented the Chairman with a reprint of an article in *The Motor Cycle* of February 16th, 1922, which showed the formalities to be gone through and the sums expended by a British motor cyclist who desired to tour on the Continent. It was also reported that the Dutch club had in one year dealt with 2,245 applications for facilities for foreign touring.

It was decided that the F.I.C.M. should take steps to be represented on the *Congrès Internationale de la Circulation Routière*, a body meeting annually in Paris, which attempts to smooth out all difficulties of international motoring. Motor cyclists hitherto have not been represented.

Insurance for Tourists and Competitors.

Next came a very interesting discussion on the question of insurance. In Denmark every motor cyclist must be insured against third-party risks, and a similar law is to be brought into effect in Switzerland. It was explained that the customs authorities of both countries would undoubtedly accept policies issued by recognised insurance companies. Mention was also made of the insurance of competitors in motor cycle races and competitions, and it was announced that riders in Switzerland could be insured up to 20,000 francs against death in a one-day race for 30 francs, and in a race not exceeding 10 kilometres in length for 10 francs. The British rate for similar policies is ten times this amount.

A proposition emanating from Belgium for the abolition of the 1,000 c.c. class for racing and other alterations in the general classification was not passed, as it was pointed out that these were purely internal matters and each country was free to follow its own desires.

A proposal from Great Britain to introduce a 750 c.c. class for sidecars was laid on the table, and another to the effect that in records the timekeeper's original sheets (if electrical timing, the original strip) should be submitted to the body passing the record was agreed: it was also decided that those parts of a motor bicycle taking part in a record which might be changed should be the sparking plug, chain or belt, wheel and/or tyre. A third proposal from Great Britain was also agreed—that mile or kilometre records might be made from a standing start with the engine running, as it was thought that this would give excellent information as regards acceleration.

Minimum Tyre Size Reduction.

From the point of view of safety it was agreed to adopt the proposal of the U.S.A. delegate that the minimum tyre size in Class E (1,000 c.c. machines) should be reduced to 65 mm., as it was found that the larger size tyre would not hold the rim at high speeds.

AN AMATEUR ROAD RACE NEXT YEAR?

Next Year's T.T. possibly in England. Proposal to Reduce Lightweight Capacity Limits.

SOME interesting recommendations regarding next year's T.T. Races are to be made by the Competitions Committee of the A.C.U. to the General Committee at its next meeting. It is suggested that in 1923 the three T.T. Races should be for motor cycles of 250 c.c., 350 c.c., and 500 c.c. respectively; a sidecar T.T. Race is also likely to be discussed. This will give great satisfaction to many makers of passenger machines.

Special consideration will be given to an amateur or private owner's event, following the T.T. Races proper. Alternatively, if amateurs can be satisfactorily defined, and the definition enforced, a reduced fee may be charged for them in the T.T. Races, and special prizes awarded.

The races may possibly be held in England about the middle of June; failing this, in the Isle of Man. It is also proposed that past T.T. winners should be made honorary life members of the A.C.U. and that special badges should be issued to them during the races week.

It is likely that efficient silencers will be made compulsory in the races.

WHOLESALE CAPTURE OF 600 c.c. SIDECAR RECORDS.

THERE has been considerable activity in the 600 c.c. sidecar record class at Brooklands lately. On Monday of last week J. Emerson (499 Douglas sc.) lowered the times for the mile, which, subject to confirmation, now stand at:

1 mile=68.82 m.p.h.
1 mile (mean speed record)=66.67 m.p.h.

On the following day he successfully attacked another two:

Flying 5 miles=70.50 m.p.h.
Standing 10 miles=68.48 m.p.h.

His equipment throughout was: Hutchinson tyres, Castrol oil, E.I.C. magneto, Shell petrol, Flexi carburetter, K.L.G. plugs, and a Beta streamline sidecar was fitted.

Also on Tuesday D. R. O'Donovan (588 Norton sc.) gained an important series of the longer distance records in the same class:

1 hr.	... ...	61m. 456yd.=61.26 m.p.h.
2 hrs.	... ...	118m. 1,030yd.=59.29 m.p.h.
3 hrs.	... ...	178m. 1,098yd.=59.54 m.p.h.
50 miles	... ...	49m. 2.04s.=61.17 m.p.h.
100 miles	... ...	1h. 38m. 42.3s. =60.78 m.p.h.
200 miles	... ...	3h. 24m. 29.41s.=58.68 m.p.h.

The equipment used included: Speedwell oil, Dunlop tyres, and a C.A.V. magneto.

SPORTSMANSHIP.

THERE are one or two little stories to tell in connection with the International Six Days Trials which go to show the sporting spirit of the Swiss.

Arriving in good time from their distant homes, the Swedish riders made a trial run through the country round Geneva, and returned in a very miserable state of mind, as they found that their brakes were wholly inadequate for the trial they were about to face. In Southern Sweden the roads are flat. Relating this trouble to a certain Swiss official, who prefers to be nameless, they were surprised and delighted to hear him offer to take their mounts into his works, which turn out a rival machine, and entirely reconstruct the brakes, and this was done to time after twenty-four hours' continuous work!

The Swiss officials were certain that England would win by a narrow margin, and were prepared to take their beating like sportsmen. Two dead-tired officials added up the figures. "Yes," said one, "we have won by one point." "Splendid," said the Swiss. "Hold hard!" said the first speaker, "it's *you*, not us." This remark, when translated, almost brought tears of joy to the Swiss sportsmen, so relieved were they at the end of this *lutte passionante* (passionate struggle), as they called it.

FAST TIMES AT CHATCOMBE PITCH.

Western Centre A.C.U. Mid-week Hill-climb Attended by Many Well-known Riders.

AFTER a heavy downpour in the forenoon brilliant sunshine favoured the Western Centre A.C.U. hill-climb last Thursday afternoon.

The event took place at Chatcombe Pitch Hill, about four miles south-east of Cheltenham, over a course all but half a mile in length. There were events for all classes of vehicles, and a large field turned out from the various clubs, both to take part in and to witness the sport.

The hero of the hour was George Dance, whose riding, as usual, was beyond all praise. He made the fastest time of the day on his 499 c.c. Sunbeam, covering the distance on more than one occasion in 23⅗s., thus again winning the "Williams" Challenge Cup; he also carried off the "John Bull" Challenge Cup, presented for the fastest time of the day with a sidecar or three-wheeled vehicle—28⅘s. W. L. Handley (348 O.K.-Blackburne) was also surprisingly fast.

The organisation was good; timing was carried out electrically; and a fairly strong wind blew in favour of the competitors, so that there was really nothing at which one could grumble.

There were thirty-two competitors, although considerably more entries.

The results were as follow:

250 c.c. Solo (Open).
1. F. Hallam (247 Levis), 31⅕s.
2. B. Kershaw (248 New Imperial), 31⅗s.

350 c.c. Solo (Open).
1. George Dance (349 Sunbeam), 24⅗s.
2. W. L. Handley (348 O.K. Junior), 25⅘s.
3. F. G. Morgan (348 Cotton-Blackburne), 27s.

350 c.c. Solo (General).
1. W. L. Handley (348 O.K. Junior), 25s.
2. J. Cook (348 Edmund), 28s.
3. F. G. Morgan (348 Cotton-Blackburne), 29⅗s.

500 c.c. Solo (Open).
1. George Dance (499 Sunbeam), 23⅗s.
2. H. Hassall (490 Norton), 24⅗s.
3. E. W. Spencer (494 Douglas), 24⅕s.

500 c.c. Solo (General).
1. E. W. Spencer (494 Douglas), 25⅕s.
2. W. L. Handley (347 O.K. Junior), 25⅖s.
3. F. J. Adam (490 Norton), 26⅗s.

750 c.c. Solo (Open).
1. George Dance (499 Sunbeam), 23⅗s.
2. H. Hassall (490 Norton), 24⅗s.
3. R. E. Eveson (490 Norton), 26s.

750 c.c. Solo (General).
1. W. L. Handley (348 O.K. Junior), 24⅕s.
2. E. W. Spencer (494 Douglas), 25s.
3. F. J. Adam (490 Norton), 26s.

Unlimited Solo (Open).
1. George Dance (499 Sunbeam), 23⅗s.
2. H. Hassall (490 Norton), 24⅖s.
3. L. Paynter (490 Norton), 26⅘s.

Unlimited Solo (General).
1. R. E. Eveson (490 Norton), 25⅗s.
2. F. J. Adam (490 Norton), 26⅖s.
3. W. H. W. Drew (490 Norton), 26⅔s.

600 c.c. Sidecars (Open).
1. George Dance (499 Sunbeam sc.), 30⅕s.
2. L. Paynter (490 Norton sc.), 31⅘s.
3. R. E. Eveson (490 Norton sc.), 32⅖s.

600 c.c Sidecars (General).
1. W. B. Gibb (494 Douglas sc.), 34⅖s.
2. J. C. Lovesy (490 Norton sc.), 36s.

750 c.c. Sidecars (Open).
1. George Dance (499 Sunbeam sc.), 28⅕s.
2. L. Paynter (490 Norton sc.), 32⅕s.

750 c.c. Sidecars (General).
1. R. Eveson (490 Norton sc.), 29⅗s.
2. W. B. Gibb (494 Douglas), 33⅔s.

Unlimited Passenger Machines (Open).
1. George Dance (499 Sunbeam sc.), 28⅘s.
2. R. E. Eveson (490 Norton sc.), 30⅕s.
3. L. Paynter (490 Norton sc.), 32s.

Unlimited Passenger Machines (General).
1. W. B. Gibb (494 Douglas sc.), 33⅕s.
2. H. V. Hughes (Morgan),36⅗s.

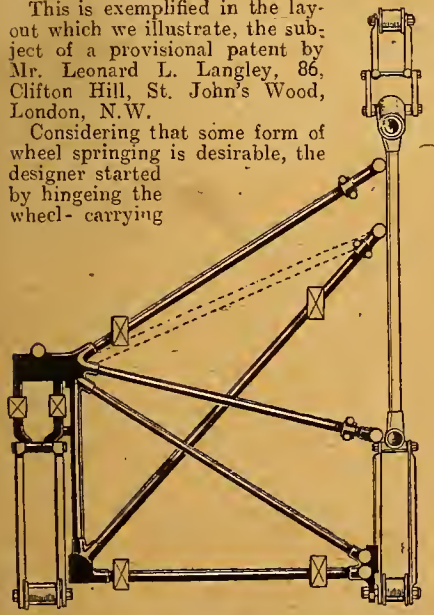
A number of minor thrills were witnessed at various times during the hill-climb, several competitors finding some difficulty in hugging the first bend sufficiently close, with the result that they found themselves dangerously near the grass bank on the opposite side of the road, and the thick dust here made a quick return to the middle of the road by no means an easy task.

TRIANGULATION AND THE SPRUNG WHEEL.

SIDECAR chassis design offers a wide field to the man of inventive genius, the tendency being more and more to ignore the conventional ideas of to-day and make a fresh start from first principles.

This is exemplified in the lay-out which we illustrate, the subject of a provisional patent by Mr. Leonard L. Langley, 86, Clifton Hill, St. John's Wood, London, N.W.

Considering that some form of wheel springing is desirable, the designer started by hingeing the wheel-carrying fork and providing a mounting for laminated springs for its suspension. From this main lug three straight tubes were carried to the cycle frame. Then an auxiliary portion was added to form some sort of rectangular mounting for the body. That, in brief, completed the task.



In the Langley sidecar chassis three straight tubes are led to the mounting for the sprung-wheel fork.

Although the sketch is more or less diagrammatic, it will readily be seen that the rigid points are where they are most needed, and that the cycle frame and the sidecar wheel are connected by a double triangle of straight tubes.

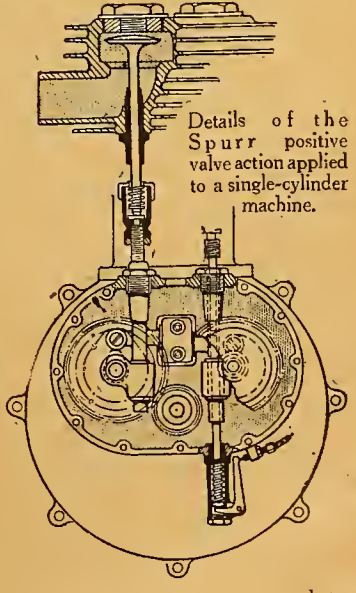
Alternative forms of wheel suspension, etc., are allowed for in the patent specification, and for heavyweight outfits an additional stay may be arranged as indicated by the dotted lines in the drawing.

POSITIVE VALVE ACTION.

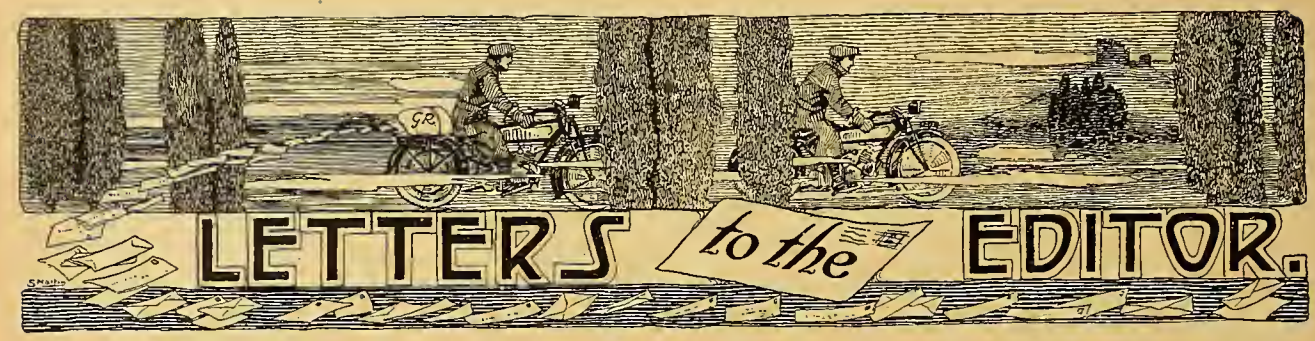
A SCHEME for the positive closing of side-by-side valves has been devised by Mr. H. F. Spurr, of 110, Newland Street West, Lincoln. The action is extremely simple, since instead of employing a plain cam a cam track is cut into the face of the 2 to 1 gear wheel; into this track is inserted a roller attached to the tappet stem, an additional guide being supplied to prevent side rock by twisting. The tappet is attached direct to the valve stem by means of a small screwed cup containing a very short length of spring sufficient only to take up the necessary tappet clearance. By this means the valves are both opened and closed positively. The scheme, though novel as regards motor cycles, has been in use on certain racing cars.

AN 18-MILE HILL.

EIGHTEEN miles up hill, even if the gradient is only moderate, represents a searching test of cooling. This unusual distance had to be covered in the Italian "Championship of the Mountain," up the St. Bernard Pass, starting from the village of d'Aoste. In the 500 c.c. motor cycle class a Triumph ridden by Opezzi was first in 35m. 14⅕s., followed by Rossi on a Motosacoche in 37m. 40s. Bisioli, who won in the recent Grand Prix Race at Strasbourg, was first in the 1,000 c.c. class.



Details of the Spurr positive valve action applied to a single-cylinder machine.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

650 SUPERFLUOUS C.C.?

Sir,—Mr. B. Pygsbotham wonders why people use machines over 350 c.c. for solo work. By the tone of his letter I take it he means fast solo work. True, the speeds attained in the T.T. races bring home the possibilities of the lightweight, but the buying public cannot, and never will be able to, buy standard machines as fast as those entered by the makers in the T.T. The Lightweight T.T. was won at nearly 50 m.p.h. average, but I certainly would not buy a two-stroke if I wanted a 50 m.p.h. machine (bar the Scott, of course). How many 350 c.c. four-stroke mounts are there able to keep up 50 m.p.h. for any length of time?

CHARLES F. STAGG.

Sir,—Mr. B. Pygsbotham seems fully convinced of the efficiency of the 350 c.c. machine, but he surely does not claim it to be the ideal sidecar mount. Some machines in this category, *e.g.*, the Douglas and the A.J.S., are fast, but even these do not make *ideal* mounts for serious sidecar work, and it cannot be expected of them.

Why is the "big twin" tolerated? Surely its more even balance and "silkiness" and its greater reserve of power give it a certain prominence over the good old "single."

London, S.W.19. "1,000 C.C."

Sir,—I do not own a machine at the moment, but my prospective purchase will be something pretty near a 1,000 c.c. 'bus unless I discover that either the new sports J.A.P. or o.h.v. Blackburne twin of approximately 750 c.c. possesses practically all the properties which less than a year ago belonged to the bigger engine only. This selection is the sole outcome of a careful and unprejudiced search for the machine which most nearly complies with the very clearly defined requirements necessary for me to experience and enjoy fully all that there is in the sport.

Does Mr. Pygsbotham really suggest that such an explanation is not a sane and reasonable one?

The outstanding feature of his letter is his rather arbitrary and uncomplimentary classification of the big twin solo rider—that is, the rider who seeks to get more than bare speed and acceleration from the stress and fury of a game little engine in extremis. Does he similarly stigmatise the individual who in the pursuit of any given hobby, recreation, or sphere of life, seeks more than just one bare attainment, or who would wish to explore other avenues? Is it a case of "big-car-itis" with the Rolls-Royce owner when a little machine of the G.N. type might be tuned to equal road speed and acceleration? Or a case of "big-house-itis" with the man who would reside in a "desirable residence, three reception rooms, billiard room, bath, h. & c., usual offices . . . " when any primitive water-tight two-roomed shack would efficiently provide mere simple shelter and warmth and a feeding and sleeping place?

On the other hand, it is certain that any man, observed to be continuously working and tuning away at his little 350 c.c. 'bus to keep it in 60 m.p.h.-under-slightly-adverse conditions fettle, would certainly evoke a new and unfavourable "medical" classification from quarters where the fascination of motor cycling was not sympathetically understood. In its unmedical form it might conceivably be "little-single-itis." Who knows?

No doubt it is within the point at issue to jot down a few of the conditions governing the writer's selection of a machine:

The wonderful little 350 c.c. engine was passed over because:

It is too fussy and insistent at speed.

It conveys too much sense of strain, effort, wear and tear at speed.

(T.T. conditions are not everyday road conditions.)

60 m.p.h. required to be available at any time without constantly looking to the tuning.

Requirements of writer a little too severe for retention of tune for a reasonable length of time.

Frame of bicycle too small (writer is somewhat above the average in height—or length of limb—and stature).

Machine too unsteady on battered roads and grease.

The 500 c.c. machine was passed over because he required:

A twin of at least 300 c.c. per cylinder;

Medium close ratio gear box;

Top speed of $4\frac{1}{2}/4\frac{1}{2}$ to 1.

All usual hills to be taken without effort, and bothering about speed gear when the hills are not "rushed."

Biggest top gear acceleration from comparatively slow speeds.

Big-twin-sports-outfit-speeds and acceleration in the event of it being wished to run a sidecar.

That indefinable pleasure of a well balanced big engine leisurely running well short of its capacity.

In addition there is the smoother and more "placid" running of a big twin at speed; the question of big tyres; the preference for a machine weighing approximately 270 lb., etc.

D. G. L.

London.

THE ROAD TO ST. DAVIDS.

Sir,—Pilgrims and travellers of many varieties from the days of William the Norman and Edward I. have visited St. Davids, that famous shrine and cathedral of South Wales. Its highway from Haverfordwest (of seventeen miles over sixteen hills) was in the Middle Ages well known to pilgrims. Pope Calixtus II. ordained that two pilgrimages to St. Davids counted as of equal merit to one to Rome.

To-day that road in some parts is in as bad condition and is as dangerous to travellers as when the pilgrims of ancient days passed over it.

The road is an epitome of many others in the country. For centuries it stood the ordinary traffic of coach, market cart, and farmer's shandry, and kept with little repair in fairly good condition.

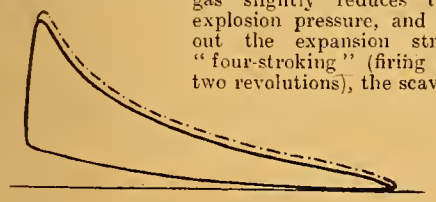
To be up to date (not having a railway line there) a railway company put on a motor-bus of 45 horse-power, and of immense weight, to deal with the local traffic. The result is a ruined road, torn up in places as if it had been ploughed. It is now being repaired at a cost of £90,000.

May a recent pilgrim to St. Davids make a suggestion to the local road authorities? Let them insist on the removal of the large 'buses, and require the substitution of lighter vehicles.

JAMES HOULT.

MUSICAL TWO-STROKES.

Sir,—With reference to the query raised on page 204 of August 10th issue of *The Motor Cycle*, the high-pitched "twanging" note of the exhaust of a two-stroke engine when "four-stroking" can be put down to the following: With the three-port type of engine firing once per revolution a certain amount of burnt gas is left in the cylinder after scavenge, and its presence in the next charge of incoming gas slightly reduces the maximum explosion pressure, and that throughout the expansion stroke. When "four-stroking" (firing only once per two revolutions), the scavenge obtained



in the "miss" stroke reduces the presence of any burnt gases that previously were present. The next incoming charge has, therefore, a slightly higher pressure on explosion and throughout its expansion. When the piston uncovers the exhaust port the effects of this are made noticeable to the ear by a sharper note. Indicator diagrams taken from a two-stroke engine when running normally and when "four-stroking" are appended. J. R. TOPHAM-HAYNES.

HAND-PUMP OILING PREFERRED.

Sir,—I see in the latest number of *The Motor Cycle* that I have received that "Ixion" rather spreads himself on mechanical oilers.

Considering my mount, I cannot agree with him at all, and wish I had a hand pump to give large dollops of oil to the engine when required.

My mount is a 595 c.c. Douglas which functioned very well in the cold weather.

Now I am stationed in the centre of India, where the "Great Ones" are building even another city (the eighth, I believe). Anyhow, they have started well, as the roads in the vicinity are good for the most part.

I have found that my machine dries up very quickly when riding over 30 m.p.h., which points to insufficient oil. I can never get it to smoke unless I fill up the drip feed cup and let it stand until the oil has gone down the pipe; then it only smokes for a minute or so.

I think the trouble is that the oil in the sump gets too hot. In the hot weather, with shade temperatures of 110° and over, it must be 150° in the sun on the road.

I got a partial seizure a few weeks ago, and took the machine into the local expert's to be dismantled, and found the connecting rod of the rear piston bent; otherwise the engine was in excellent order.

Can "Ixion" give any suggestions for gingering up the oil system. I also have difficulties with *all* oil connections after some miles on bumpy roads; they all leak, and oil oozes out freely.

Delhi. ULYSSES.

AVERAGE SPEEDS OF 350 c.c. MOUNTS.

Sir,—I have been a reader of your excellent weekly for some time, but did not become a "proud possessor" until six months ago, when I took delivery of a 1922 349 c.c. Sports A.J.S.

A few weeks ago I read of Mr. J. R. Jones' average speed performance of 35 m.p.h. on his 348 c.c. Douglas with a loaded sidecar.

A week or so ago I planned a "double twelve" hour trip from Deal to Plymouth and back over a long week-end. Going to Plymouth my wife accompanied me on the pillion. I was unfortunately advised by a very well known body to take the coast route through Hastings, Brighton, Southampton, Bournemouth, Dorchester, etc. I imagine it was thought I wanted a holiday instead of an endeavour to evade present railway fares.

In my inexperience I planned my schedule through that coast route for an average speed of 20 m.p.h.

Unfortunately, I could not leave early on the first day and could only do 80 miles, but was up to time. The remaining 220 miles were rattled off on the second day between 9 a.m. and 11 p.m. The average of 20 m.p.h. (running time) was maintained throughout, but at what a cost! We seemed to be tearing along at over forty nearly all the way. This seems queer arithmetic, but anyone who knows the coast towns will agree with me that this speed in the country is necessary to maintain the average.

On arrival in Plymouth my agent showed me the maker's sidecar suitable for my mount. My wife immediately insisted on the purchase or a return by rail. The strangeness of the new drive was overcome during the stay and the return journey set out upon (inland this time). I got away earlier on the first day and put up for the night at Salisbury. My average speed now with the loaded sidecar was 16 m.p.h. as far as Exeter, and then 20 m.p.h. on to Salisbury. I really think Devonshire should be considered separately, especially for such small outfits. The run from Salisbury to Deal was made the next day. On the whole the roads are very good, and I went at it hard on this last run, yet my average was only 24 m.p.h. I did a timed mile at 40 m.p.h., but to keep up 24 m.p.h. on such a long run meant hard going for the little 'bus for many miles of country. Happily, I had no involuntary stop either way, or even this average could not have been kept up.

Now I do not wish to compare the merits of the A.J.S. and Douglas junior mounts, but Mr. J. R. Jones' average of 35 m.p.h. puzzles me.

I have no speedometer, and my speed on such a run is calculated from milestones, route cards and a watch.

I am beginning to think a lot about this question of speed. In my opinion there are too many enthusiastic young motorists who talk casually of their 'buses "doing" 60 and 70 m.p.h. on the open highway. But perhaps after all it is the speedometer manufacturers who realise that a nice friendly make will be a "best seller."

Deal. B-ONE.

Sir,—

Some talk of Alexander, and some of H. Le Vack,
Of Dixon, and of Ixion, and many a racing crack;
Of racing cams and pistons, of new improved valve guides,
Of tyres, and wheels, and stronger steels, and many things besides.
But of all the sport's great heroes, there is no one to compare
With Mr. Jones, whose speed is as the speed of sound in air.
A bang! a blast! a whirlwind—he must be on the road;
Le Vack, and Pullin, Dixon, here's your chance of being towed.
I thought I read of records at Clipstone yesterday,
Ye gods! but what would they have been had he been there to pay?
A slight mistake in timing, a little slip in miles;
The story's good. Oh! keep it, excuse the reader's smiles.
Now, Mr. Jones, a long farewell, my hat is in my hand;
We all have bikes, we tell the tale, and so we understand.

Glasgow. JEHU.

Sir,—As a final contribution to the somewhat protracted correspondence on the above, may I state in reply to several letters that if their respective writers would kindly refer to my previous letter regarding the 100-mile run from Birkenhead to Birmingham they will at once notice that I clearly and emphatically stated that this was done on a solo mount, and absolutely no reference whatsoever was made to a loaded sidecar. I simply quoted the instance in question to convince one of your correspondents that a 348 c.c. Douglas can maintain a 35 m.p.h. average for fairly long distances—e.g., Birkenhead-Birmingham.

"Dougite" admits that he could do a "burst" of "40 easily" with a light sidecar attached to his 348 c.c.

Douglas. I have not only done a "burst," but I have kept up "40," and this simply goes to prove that on a tolerably good road a 30 m.p.h. average could easily be maintained.

To repeat myself again, on a long run I could not possibly hope to keep up such an average—only a fool would expect to—but as regards solo work it is an average that can be kept up with the minimum of cost and trouble.

In conclusion, my average speeds are no exception to the rule—every Douglas rider can do the same if he wishes to. I refer those interested to Mr. Hartley's letter; he averaged 40 m.p.h. over a distance of 50 miles, and 37 m.p.h. over a distance of 75 miles, and therefore it is quite evident that those who doubt these performances are not only ignorant of the subject which they are supposed to be discussing, but, in addition, have never been astride a Douglas machine. J. R. JONES.

WHERE CAN SIDECARS BE IMPROVED?

Sir,—"Friar John" asks where can sidecars be most improved? In my opinion the tubular system of construction is at fault, and ought to be omitted in the design of any chassis or frame intended to travel on the road. A few points may be gathered from my experience of old crocks.

I first took the road with an old 50 in. ordinary pedal cycle, with solid tyres, and covered some miles, doing all my own repairs. I then thought that the front wheel was fine, but the back wheel was too small, and the backbone too stiff; these two points shook my bones, especially on cobble pavé. My next mount was a "safety," with pneumatic tyres, which was much better, but the frame was too rigid. After this I got a 10 h.p. White steam car, with wood plated chassis, which did its work well, but the springs were too light. My little boy was often tossed off the seat, on quite a good road, if I opened out to over 20 m.p.h.

The next was a 10 h.p. Mors car (four-cylinder), with wood plated chassis, which was well designed, with large diameter wheels, and correctly sprung; it glided away beautifully, and the chassis lent itself to the uneven road, the tyres and springs doing their bit easily. Then came a "6 h.p." De Dion Jackson car, with tubular chassis. When going over pot holes, the steering wheel often jerked clean out of my hands. The frame was too rigid, and the springs too light. I then got a Premier motor cycle with wicker sidecar, tubular chassis; potholes meant pitch and toss with violence. Frame and chassis were too rigid. I now have an old Humber, with collapsible sidecar body, and spring steel chassis; the sidecar glides along very smoothly, and does not transmit the shocks to me when driving to half the extent that the tubular chassis did. Sidecar chassis should be made from the best spring steel, and if correctly designed they would prove ideal.

I am also in favour of spring steel frames for motor cycles, which I feel sure would damp out many jolts, which the tubular frame transmit to both machine and rider.

EDWARD BRACEWELL.

Sir,—Considering that comfort is first in demand, that the spring wheel of simple and perfect construction will eventually kill the rigid type is beyond all doubt. Since the cost is equal, the comparison for comfort is like light to darkness, or automatic to mechanical valves.

Coventry. A. S. M.

Sir,—The upholstery of many sidecars is lacking in resilience, and is made of very poor material.

The position and size of the screen relative to the passenger is sometimes wrong. The screen should be placed fairly near the passenger, as on the A.J.S., etc.

The facilities for carrying luggage and sundries are in many cases insufficient; there should always be a luggage grid, *à la* A.J.S. again.

The appearance and efficiency of the hood can be improved. Side curtains should always be supplied.

The mudguarding of the sidecar wheel is often poor, and the guard should be made larger, and with deep valances.

Even the chassis of some models are not up to their work, and a four-point connection is advisable.

Among details, it makes an appeal to the passenger, fair or otherwise, if suitable arm-rests are provided, and if a step is fitted. I have no interest in any firm.

London, S.W.19. FAMA CLAMOSA.

Sir,—I own a Triumph and a proprietary sidecar, and have had some very long runs on the outfit. The Triumph is a gem; only I wish the spokes in the two wheels would not break so often! This defect I partly attribute to the dead running of sidecar chassis.

Why is it that so much attention is paid to the springing of the sidecar body? The cycle rider requires as much pleasure and comfort as the passenger. All the road shocks from the sidecar wheel are passed by way of the chassis frame to the cycle, and materially add to the discomfort of the driver. In the ordinary course the rear wheel is not sprung, and the extra unsprung weight makes the rear very dead indeed.

I have had my chassis frame break three times; this, no doubt, would be obviated had the chassis a sprung wheel.

Swindon. F. H. P.

NOMENCLATURE.

Sir,—May I suggest "Siamese Twin" as an alternative to the term "split single" as applied to the Italian Garelli motor cycle described in a recent issue?

Kent. SLEEVE-VALVE.

SUSTAINED HIGH AVERAGE SPEEDS.

Sir,—Since "Water-cooled" is evidently a hard rider, it would be interesting to know what he considers the ideal gear ratios for the Scott-Squirrel for all-round work.

There are many prospective buyers of this machine, I am sure, who would welcome some advice on the choice of the ratios offered by the manufacturers.

E. HODGKINSON.

STANDARD BELT LENGTHS CONDEMNED.

Sir,—We read in your last issue a complaint from a rider that he was compelled to purchase a longer length of belting when on tour than he needed, consequent upon the garage proprietor stating that it was impossible to procure long lengths of belting from which lengths could be cut as required.

We do not know whether your correspondent was purchasing a "John Bull" belt, but there is no difficulty in any trader purchasing the "John Bull" belt in long lengths of about 64 feet, and we experience a regular demand for such lengths. In addition, these belts can be obtained in lengths suited to the standards of all machines, but as the standards are so varied the long lengths are particularly useful.

THE LEICESTER RUBBER CO., LTD.
(J. Cecil Burton, Director.)

GOGGLES AND HEARING.

Sir,—I should like to say that I fully endorse all that "Sutton Bank" has experienced in this matter, and would like to put forward the theory that the lack of air pressure on one's eyeballs gives one a false impression of lack of speed, and think that in some way there is a nerve in the eye which is connected to the ear-drums.

Westcliff-on-Sea. H.J. 915.

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook of the motor cycle.
Price net 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Eighth Edition. Price net, 2/-. By post, 2/3.

"MOTOR CYCLE REMINISCENCES."
By "Ixion," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

Club News

Woolwich, Plumstead and District M.C.

A gymkhana is being held on the 27th inst. at Knockholt, Kent, and members are invited to participate in an extremely varied and interesting programme.

Barrow and District M.C.

Results of the reliability trial for the Members' Challenge Cup are as follows:—

1st.—Capt. J. T. Noble (678 Martinsyde sc.).
2nd.—J. Morrison (498 P. and M.).
3rd.—D. Channing (499 Sunbeam).

Abergavenny and District M.C. and L.C.C.

H. Hassall (490 Norton), deputising for a local rider, made fastest time of the day at the recent hill-climb. Arthur Davies (Cotton), T. Nicklin (Sunbeam), J. Parker (Sunbeam), won the classes in which Hassall did not ride.

Clitheroe and District M.C.C.

Considerable interest was displayed in a petrol-consumption test held recently. The winner of the first prize, a carburetter presented by Messrs. C. Binks, Ltd., was S. Whiteside (A.V. cycle car), while second and third awards were taken by H. Sainsbury (Marseel light car) and G. Hunt (976 Sunbeam sc.).

Bolton and District M.C.

The President's Cup, competed for in the reliability trial which took place last month, was won by W. E. Smithie (490 Norton), second best performance being made by V. Rothwell (633 Norton sc). Motor cyclists wishing to join this club should communicate with Mr. W. Headley, at Raikes Hall, Bolton.

Ashford M.C. and L.C.C.

On September 3rd a hill climb has been arranged to take place at a hill which will not be made known until the day before the event. Competitors will be allowed to ride up the hill once only before actually competing. There will be classes for all types of vehicles, including a special event for "veteran" machines.

Darlington and District M.C.

On the occasion of their first annual long distance trial on Saturday the 12th inst., members were unfortunate as regards weather conditions, and although a good entry had been received only eleven competitors started on the run to Edinburgh *via* Appleby and Carlisle. Leaving Darlington at 8 p.m., the first man arrived home at 8.8 p.m. the next day, having covered a total distance of 304 miles. A large crowd of interested spectators assembled to witness the finish. Prize-winners: (1) J. Moffet (Mathis light car), (2) R. F. Stobbs (349 A.J.S.), (3) P. Bell (349 Massey Arran). The district was well represented in the trial, competitors from Northallerton, Barnard Castle, Wolsingham, and Bishop Auckland taking part.

The next important trial is to be held on the 27th inst., when a number of valuable prizes will be offered for competition.

Isle of Wight M.C. and L.C.C.

Results of the hill climb, which took place recently over a difficult course near Ventnor, are as follows:—

275 c.c. two-strokes, solo.—(1) A. J. Rust (269 O.K. Union), 44⅕s.; (2) C. Langford (269 Sparkbrook), 54s.

350 c.c., solo.—(1) J. R. Morris (348 Raleigh), 38⅖s.; (2) C. Langford (348 Douglas), 43⅕s.

500 c.c., solo.—(1) C. F. Stagg (494 Douglas), 34⅘s.; (2) E. G. H. Morris (490 Norton), 36⅖s.

750 c.c., solo.—(1) C. F. Stagg (494 Douglas), 34s.; (2) D. Oliver (498 Zenith), 35⅘s.

Unlimited, solo.—(1) W. H. S. Collins (989 Harley Davidson), 31⅘s.; (2) W. H. Linington (976 Royal Enfield), 32⅘s.

600 c.c., sidecars.—(1) J. H. D. Allen (557 B.S.A. sc.), 48⅗s.

Unlimited, sidecars.—(1) C. W. Brancon (976 Royal Enfield sc.), 39s.

Dulwich and District M.C. and L.C.C.

A reliability trial was recently organised which included some fairly stiff hills, and creditable performances were put up by many of the competitors. Silver medals were awarded to Robinson (596 Indian sc.) and D. Setter (550 Triumph sc.).

Burton M.C. and L.C.C.

On August 13th a reliability trial for the Robotham Cup was held over a difficult course of 88 miles, when the following were successful:—

P. B. Chester (490 Norton), 3½ marks lost, winner of Robotham Cup. H. L. Collins (490 Norton), 6½ marks lost, silver cup.

Week-End Club Events.

Aug. 24th and 26th.—Doncaster and District M.C.C.—Speed Trials.
Aug. 26th.—Worksop M.C. and L.C.C. and Mansfield and District M.C. and L.C.C.—Joint Speed Trials on Clipstone Drive.
Aug. 26th.—Mid Bucks M.C.C.—Second Trophy Run.
Aug. 26th.—Kelso and District M.C.C.—Hill Climb.
Aug. 26th.—Sheffield and Hallamshire M.C. and L.C.C.—24 Hours' Reliability Trial.
Aug. 26th.—Wallington and District M.C. and L.C.C.—Freak Hill Climb.
Aug. 26th.—Reigate, Redhill and District M.C.C.—"Old Crocks" Trial.
Aug. 26th.—Gloucester M.C. and L.C.C.—Secret Destination Trial.
Aug. 26th.—Aberdeen and District M.C.—Hill Climb.
Aug. 26th—Connaught M.C.C.—Gymkhana at North Harrow.
Aug. 26th—York and District M.C.—Garrowly Hill Climb.
Aug. 27th.—Darlington and District M.C.—Reliability Trial.
Aug. 27th.—Prestwich and District M.C.—Reliability Trial.
Aug. 27th.—Liverpool M.C.—Reliability Trial for Colmore Trophy.
Aug. 27th.—Ashford M.C. and L.C.C.—Run to Eastbourne.
Aug. 27th.—Exeter M.C. and J.C.C.—Run to Becka Falls and Hawtor.
Aug. 27th.—Eastbourne and District M.C.C.—Petrol Consumption Test.
Aug. 27th.—Epsom and District M.C.C.—Reliability Trial.
Aug. 27th.—Halifax and District M.C. and L.C.C.—Run to Fewston.
Aug. 27th.—North Wales M.C.C.—Picnic.
Aug. 27th.—Manchester M.C.C.—Social Run.
Aug. 27th.—Middlesbrough and District M.C.—Reliability Trial for McAdams Cup.
Aug. 27th.—Newcastle and Northern M.C.—Picnic Run to Alwinton.
Aug. 27th.—Coventry Triangle M.C.—Run to Droitwich.
Aug. 27th.—Atherton and District M.C.C.—Run to Castleton.
Aug. 27th.—Sheffield M.C.C.—Run to Newark Castle.
Aug. 27th.—Rotherham and District M.C.—Run to Harrogate.
Aug. 27th.—Rochester, Chatham and District M.C. and L.C.C.—Run to Hastings.
Aug. 27th.—York and District M.C.—Run.
Aug. 27th.—Leeds Motor Union.—Reliability Trial.
Aug. 27th.—Worcestershire M.C.—Symonds Yat Picnic.
Aug. 30th.—Leeds Motor Union.—Run from City Square.
Aug. 31st.—Gloucester M.C. and L.C.C.—Visit to Avon Tyre Co., Melksham.
Aug. 31st.—Bidwell M.C.—Run to Woodhouse Eaves.

Builth Wells and District M.C.C.

Enthusiasm ran high at the second annual carnival and gymkhana held by the club on Wednesday, the 9th inst.

Epsom and District M.C.C.

The progress of this newly-formed club has been entirely satisfactory. A reliability trial is being held on the 27th inst., consisting of two laps of 20 miles each, starting from Epsom grandstand at 3 o'clock p.m. Further information can be obtained from Mr. G. E. Himing, "The Laurels," Park Hill Road, Ewell.

Gipsy M.C.C.

The annual rally is to be held this year at Monsal Head, near Bakewell, on September 3rd. Secretaries of clubs which intend competing for the trophy should write for further particulars to Mr. C. Thornewill, Hampton Cottage, Eynsford, Kent.

Neath and District M.C.C.

Speed trials will take place in Margan Park on Saturday, Sept. 2nd, all classes being catered for, including a special championship event. The D. M. Evans Bevan Challenge Cup is open for competition, and the present holder, C. Sgonina, will defend his title. The entire proceeds will go to the Neath Nursing Association.

East Midland Centre A.C.U.

A hill-climb open to all members of clubs in the area will take place on Saturday, Sept. 16th, in the hope of encouraging the entry of new riders, it has been decided to run a special section in each class for those who have not been in the first three places at any speed event this year. Full particulars are obtainable from Mr. K. S. Topping, 64, Frederick St., Loughborough.

Macclesfield and District M.C.

Starting from Fence Avenue, Buxton Road, Macclesfield, at 1.30 p.m. on the 27th inst., a reliability trial will be run over a point-to-point course of approximately 752 miles. Special awards will include the Birchenough Cup and the Hopwood Shield. This event is open to members of the North Cheshire, Chester, Buxton, and Warrington Clubs; entries should be addressed to Mr. S. T. Holland, West Mount, Chester Road, Macclesfield.

Dunheved (Launceston) & District M.C.C.

Some good performances were witnessed at a recent hill-climb when H. Piper (499 Sunbeam) carried off first place in the solo class, closely followed by O. G. Whitlock (349 A.J.S.). The sidecar class was won by E. R. Wells (490 Norton sc.), with W. Weighell (799 A.J.S. sc.) second. A special prize for Morgan runabouts was secured by W. T. Horrell, and the novices prize by T. C. Williamson (349 A.J.S.), whilst the fastest turn of the day was made by H. Piper (499 Sunbeam). On the 30th inst. a reliability trial to Porlock and back will take place.

Yeovil and District M.C.C.

The trial held on Saturday, the 5th inst., for the President's challenge cup produced some excellent sport, and very close times were recorded. Competitors had to make the first circuit at an average speed of between 17 and 20 miles an hour, and the next two circuits in as near as possible the time taken on the first. The course totalled 76½ miles, and had to be covered non-stop. The best motor cycle performance was made by E. P. Saunders (350 Diamond), 18s.; and Arnold Wright (499 Sunbeam sc.) was 22 seconds out. Certificates for non-stop runs were also awarded to the following:—L. F. Clarke (532 Scott), 37s.; W. G. Churchill (349 Verus), 41s.; G. L. Morrish (499 Sunbeam), 50s.; T. V. B. Hook (595 Douglas sc.), 65s.; J. Shenton (Morgan), 76s.; Miss M. Chiswell (350 Diamond), 116s.; E. G. Lawrence (498 Ariel), 125s.; J. Stagg (494 Douglas), 165s.; H. G. Clarke (595 New Hudson sc.), 459s.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

REBORING CYLINDERS.

I am thinking of having the cylinders of my Douglas rebored and fitted with new pistons. Will you inform me what is the least amount of metal one can leave with safety? Surely the thinner the walls the better the cooling would be. Can you recommend reboring?—L.E.F.

If it is necessary to rebore the cylinders of your Douglas, we should suggest that you approach the makers, who would perform the work far more satisfactorily than most smaller firms. If the ovality of the cylinders necessitates removal of more than $\frac{5}{100}$ in., we should advise you to have them renewed.

A HEAVY LOAD.

Intending shortly to buy a sidecar outfit, I would like to know if my so far intended choice is impossible as I have been told it is. The passenger list includes myself, 12 stone; wife (pillion), 9 stone; and two children (sidecar), 5 stone the two; the type of machine selected is a 350 or 370 c.c. two-stroke, three-speed gear, all-chain drive. Is 21 stone on the bicycle too much?—J.W.P.

The load you suggest is far too heavy for a machine of under 500 c.c., and we would recommend you consider one of at least this size, and preferably a single cylinder. A weight of 21 stone on a lightweight motor bicycle itself, as a regular load, is excessive.

Important Dates.

Sat., Sept. 2nd. — Cheshire Centre A.C.U. Open Reliability Trial.

Fri., Sept. 15th, to Mon., Sept. 18th—Anglo-Dutch Trial in Holland.

Sat. Sept. 16th—The Scott Trial.

Sat., Sept. 23rd—500 Mile Race at Brooklands.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd.—Olympia Motor Cycle Show.

A halt by the way. G. S. Davison (247 Levis), B. Malmberg (494 Husqvarna), L. Pelissier (994 Motosacoche), and F. W. Giles (800 A.J.S. sc.) near Lugano during the International Six Days Trial in Switzerland.

UNSUITABLE MAGNETO.

I do not think the magneto is the right one for my twin N.S.U. The cylinders are set at 60°. If I set No. 1 exhaust to close top dead centre, will the other come right? Contact breaker cams are set at 180°; is this right? If not, can I alter them to suit the engine?—D.N.O.

(1.) If both valves are worked from one cam you need only time one valve, and if this is done properly the correct timing of the other will follow. (2.) If the magneto is one designed to suit an engine with cylinders set at 180°, it will be impossible to modify it to suit a 60° V twin engine; you would need another magneto suited to the latter angle. The cams should be set at 150°.

TIMING OLD PATTERN ENGINE.

(1.) Will you please give me the correct timing of the exhaust valve of my old type Fafnir motor cycle? (2.) If this were wrong, would it cause overheating?—E.H.E.S.

(1.) The timing of the exhaust valve of your engine, which is presumably one with an automatic inlet valve, is as follows:. Rotate the engine until the piston is at the top of the stroke, then insert the cam wheel so that the valve is just closing. (2.) If the exhaust valve timing is very much out it would cause poor running. Most probably the trouble is the result of late ignition timing, insufficient lift of the exhaust valve due to a worn cam or too much clearance between the tappet and the valve stem.

OVERTAKING A TRAMCAR.

Will you kindly tell me which is the correct side on which to pass a tramcar, both when running and stationary? I was told recently that it is correct to pass a stationary car on the near side, but as passengers are usually mounting or dismounting when the car stops it is more of a difficulty to pass on the near than the off side.—J.P.M.

In overtaking a tramcar a good deal of discretion has to be used, and there is no very definite legal ruling on the point. When a tramcar is in motion it is better, if at all possible, to overtake it in the ordinary way on the off side, but circumstances may compel you to keep on the near side. The same applies also when it is stationary.

LEAKAGE FROM GEAR BOX.

After running a few miles my belt becomes smothered with grease from the gear box of my single-cylinder Ariel. Last week I partly filled the gear box with grease before starting on a long journey, but on arriving at my destination the box was nearly empty. What is the best means of cleaning the belt? Is petrol injurious? What grease do you recommend?—W.C.J.

The only thing to do is to have the gear box taken down and find the cause of the leak. It might be that the bearings require rebushing, or that a felt washer is needed. All you can do is to wipe the belt with a rag soaked in petrol. Petrol naturally destroys rubber, but if it is wiped quickly and lightly no harm should ensue. Ambroleum or thick engine oil is generally used for the gear box.

REMOVING BELT DRUM.

Will you inform me how to remove the belt driving wheel, which is fixed to the hub of the 1915 single-cylinder B.S.A. motor cycle?—NOVICE.

The belt pulley on the rear wheel of the 1915 B.S.A. motor cycle is screwed on with a left-hand thread (the lock ring is right-hand thread). These pulleys are extremely difficult to remove, and unless you have special apparatus, they are easily damaged in the process. We would recommend you to return the wheel to the makers if it is necessary that the pulley should be taken off.

FLYWHEEL RING OR CHAIN SWISH.

On my 349 c.c. Blackburne engined two-speed machine the chain drive (not enclosed) between the engine and gear box makes considerable noise when travelling over 15 m.p.h., and I have tried tightening and loosening the chain, but all to no avail; it does not catch anywhere, and the sprockets are not worn; chain lubricant has no silencing effect. I am told that a silent chain and sprockets will cost about £7 or £8, which is altogether too much to spend on the machine. Also what is a suitable ratio for top gear; the present one is 6½ to 1? H.D.R.

You do not say if you are using your machine solo or with a sidecar, consequently it is rather difficult to advise you with regard to the gear ratio, but if you are riding solo a gear of 5½ or 6 to 1 should be low enough. If your chain sprockets or chain have worn badly there is no cure for the noise you mention other than replacement, but most outside flywheel machines are apt to accentuate the chain swish. Try the effect of painting the flywheel with a thick paint, which may deaden its ringing.

READERS' REPLIES.

A TWO-STROKE RATTLE.

My Villiers (old type) engine developed a bad rattle. On arriving home, I discovered that the fly-wheel keyway was enlarged to half the circumference of the bore. The remedy was obvious.—A. KELSALL.

A bad rattle occurred whenever I exceeded 25 m.p.h., but with my timing thus—handle-bar lever at full retard, points just breaking, and piston just *past* t.d.c., I can now exceed 35 m.p.h. without any trouble.

Also, instead of 8, 16, and 32-stroking when running slowly downhill (as it used to do), my Peco engine now two-strokes perfectly.—A. A. SMITH.

If "H. B." tries a thicker washer between cylinder and crank case he will probably cure the rattle. My own engine, 1916 Villiers, was thoroughly overhauled about a year ago, but when I received it again I found it would not exceed 25 m.p.h. without a terrific clanking from the engine. As far as could be ascertained, everything was in order. New plugs and a different timing were tried without success. Just as I was on the point of giving it up as a bad job I tried a thicker washer, with great success. Speed, hill-climbing and slow running all improved, without a trace of rattle. Why a thick washer is required now, when formerly I used a paper joint, is a mystery, unless the new con-rod was a shade longer than the old one and so raised the compression or altered the port timing. It always takes about 200 miles after decarbonisation to get the former power back.—SHEFFIELD-VILLIERS.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

H.L. (Hove).—799 c.c. A.J.S. sidecar fitted Lucas Magdyno: suitable speedometer and hood.

"M. J. T." (Arnhem).—Mills carburetter for slow running and economy on American big twin to replace Schebler type.

"C. J. S." (Stoke-on-Trent).—225 c.c. Royal Enfield "sports" model: speed; fuel consumption; reliability.

"H. W." (Stonehouse).—Rudge-Multi and Zenith-Gradua: belt slip in wet weather; life of belts.

"H. D. R." (Tadworth).—398 c.c. A.B.C.: reliability; carburation.

"R. F. N." (London).—398 c.c. A.B.C. and sidecar: reliability.

"J. S. B." (Waterloo).—989 c.c. Harley-Davidson sidecar with Binks carburetter.

"A. E. S." (Newark).—142 c.c. Atlas lightweight.

"F. W. T." (West Norwood).—349 c.c. Royal Ruby "sports": with Amac carburetter.

"W. W." (Widnes).—584 c.c. Harley-Davidson: suitable sidecar, m.p.g., steering and speed.

"C. V. H." (Newquay).—976 Brough Superior (side valve J.A.P.) and 986 c.c. o.h.v. model: speed, reliability, and m.p.g. with sidecar.

"H. L. G." (Tunbridge Wells).—349 c.c. A.J.S.: speed, climbing, and "all-weather" finish. Also 398 c.c. A.B.C. and 499 c.c. Triumph.

Cycle Car Records.

A 700 c.c. Blackburne engine was used in the A.V. monocar which recently created flying kilometre and mile records at Brooklands.

Auto-Wheel Price Reduction.

The price of the Auto-Wheel attachment has been reduced from £30 to £25 by Auto-Wheels, Ltd., Russell Road, Kensington, London, W.14.

The Belgian Grand Prix Winner.

Antoine, who has been adjudged winner of the Belgian Grand Prix, after Jackson's disqualification, used a Lodge plug in his o.h.v. Triumph.

Magneto Repairs in London.

London users of the Coventry made M.L. magneto will find a complete service department at S. Smith & Sons (M.A.) Ltd., 179, Great Portland Street, London, W.1.

Midland Foundrymen's Success.

At the recent Foundry Exhibition in Birmingham five employees (not three as previously stated) of the Midland Motor Cylinder Co., Ltd., gained prizes out of a total entry of 400.

Price of the McKechnie.

The price of the McKechnie spring frame sidecar outfit is now £155. The address of the makers is McKechnie Motors, King's Head Chambers, Coventry.

Hand Cleanser.

Rejoicing in the name Yomf, a hand-cleanser is being marketed by the Quick Service Motor Co., 123, Church Street, Croydon. A sample has passed its test at the editorial hands.

Better Late than Never.

A. Attwood, who protested successfully against being disqualified on a 600 c.c. Hawker sidecar during this year's London to Edinburgh run, has since been awarded a gold medal by the M.C.C. for his performance.

Change of Address.

Owing to the increasing demand for the Henley motor cycle, the manufacturers have found it necessary to remove to larger premises, the address of which is now: Messrs. Henley Engineering Co., Ltd., Steward Works, Doe Street, Birmingham.

The Chameleon Exhaust Pipe.

The colour-changing propensities of the nickel-plated exhaust pipe of a certain sports model are being watched with growing interest. At first the plating turned a pale straw colour, and then took on the appearance of polished brass. It next reverted to its original clear nickel, and now a wondrous purple hue is spreading downwards from the exhaust port.

Times to Light Lamps.

August	24th	8.34 p.m.
„	26th	8.30 „
„	28th	8.26 „
„	30th	8.22 „

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Tyresome Tips.

"Soak them in paraffin, and then give them liberal treatment with lubricant"—a Yorkshire paper's advice on the care of motor cycle tyres.

Taxation Prophecies.

Included in extracts from a Northampton newspaper two hundred years ago is the following news item: "Municipal authorities have been invited to suggest alternative schemes for the taxation of motor vehicles." A correspondent suggests that perhaps, when the subject *has* been considered for 200 years, some system approaching the reasonable may be hoped for!

The Continental Way.

On one of the hairpin bends on the Jura road, where a glorious view over the Lake of Geneva and the High Alps is unfolded, is displayed a notice "Ralentissez—Admirez" (Slow up—Admire).

A Feathered Phantasy.

Extract from a daily newspaper:—"Muffled noises from underneath a char-à-banc alarmed the passengers during a 10-mile ride from St. Brides to Newport (Mon.). At the end of the journey four hens flew out of the vehicle's gear box." No wonder the passengers were alarmed!

The Silence Gamble.

Different localities have different ideas upon silence, and the fact that the Reading magistrates recently decided, after a demonstration, that a sports model with a straight through exhaust pipe was not unduly noisy is no guarantee of future immunity from prosecution elsewhere—or, for that matter, in Reading.

Extra "c.c." Not Superfluous.

A detective recently received information that a motor cycle had been stolen (a 348 c.c. Douglas as it happened). He went home, got out his 976 c.c. New Imperial sidecar, and although the thieves had fifteen minutes start, was successful in overhauling them 14½ miles from where the theft had taken place. The idea of justice overtaking them with such alarming rapidity astride a big twin of modern design had apparently not occurred to the culprits, for they abandoned the stolen Douglas and fled.

Coupé Sidecars.

Will the coupé type of sidecar eventually become a standard pattern and be included in catalogues of the majority of manufacturers?

Waste Space on Sidecars.

It is to be hoped that sidecar manufacturers will pay more attention to the utilising of the waste space between the machine and sidecar. Special grids holding specially shaped cases would be useful when touring.

Sign Posting.

More attention should be paid by local authorities to signposting in towns and villages. The most difficult districts to traverse are those in the South, both Surrey and Sussex being as bad as any county. Rarely is the same amount of difficulty experienced in the West, Midlands, or North.

4s. Worth of Bliss.

At the Bishops Lydeard (Somerset) Police Court Ralph Alexander Coleman, a boy aged 12, was summoned for having ridden a motor cycle without a licence. The boy had ridden the machine from Taunton, a distance of five miles, and when quite near his home met the local police sergeant. The bench admired the boy's pluck and discharged him on payment of the costs, 4s.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Indispensable.

New high-powered sidecars are as much in evidence as ever they were. There appears not the slightest likelihood of any waning in their popularity, and once again may be asked, Where is the vehicle that can replace them?

Heard on the Halls.

Sitting in a dazed condition on the road with his right arm clutching what remained of a front wheel, a motor cyclist, who, at 40 m.p.h., had forgotten how the throttle closed, was requested by a short-sighted old lady to mend her umbrella as well!

Motor Cycle Club Recommends Silence

Darlington and District M.C. and L.C.C. has passed the following commendable resolution: "That all members of this club are advised by the committee to comply carefully with the law regarding the silencing of their machines, thus assisting to preserve our good relations with the police and avoiding any annoyance to the public."

Once upon a Time.

Blowing the horn of his Enfield sidecar outfit when passing three horse brakes on the High Beach-Woodford road, a reader was stopped by a policeman and told that he was making a noise. The officer then produced a piece of wire, looked over the machine, and pronounced that the tappets wanted packing! (N.B.—This is neither a dream nor a fairy tale.)

Special Tracks for Cyclists Opposed.

Propositions that special cycling tracks should be laid alongside new and existing main roads are strongly opposed by organised cyclists' interests, which take the view that such provision may possibly become only a preliminary towards excluding the cyclist from full rights on the road. In consequence of this the Roads Improvement Association has dropped its sponsorship of the suggestion.

Rust.

A movement, of interest to motorists, is on foot to form an association of manufacturers of non-corrodible and anti-corrosive products to foster the scientific and commercial development of materials and processes that tend to defeat the ravages of rust and corrosion. Any of our readers who are interested in the project are invited to communicate with Mr. W. R. Douglas Shaw, at the Royal Society of Arts, 18, John Street, Adelphi, London, W.C.2.

CLUB NEWS (continued from p. 275)

Essex M.C.

Starting at 6.30 p.m. on Friday, September 8th, from the Castle Hotel, Woodford, the twenty-four hours reliability trial through London to Bala and finishing at Luton will take place, covering a total distance of 420 miles. All awards will be won outright; further particulars are available from Mr. E. J. Bass, 40, Chancery Lane, W.C.2.

Midland C. and A.C.

Arrangements are now complete for the inter-club team trial on the 9th of next month, when teams representing competing clubs will consist of three solo and three passenger machines, all riders to count. Clubs intending to enter for this event, which is by invitation, no entry fee being required, should communicate with Mr. J. L. Stocks, at the Ariel Works, Bournbrook, Birmingham, as soon as possible.

Kidderminster M.C.C.

Motor cycles, sidecars, and cycle cars may enter for the half-day reliability trial which is being held on Saturday the 26th inst., starting from the Red Lion Hotel at 2.15 p.m., over a route approximately 80 miles in length. The classes run will be as follows:—Solo machines up to 350 c.c., and unlimited; passenger machines up to 600 c.c., and unlimited. Entries should be addressed to Mr. A. K. Bell at 33, St. George's Terrace, Kidderminster.

Annfield Plain and District M.C.

A course of 170 miles over somewhat difficult country in parts was chosen for the President's reliability trial which was held recently. The results of the run are now to hand, and are as follows:—

(1) R. Wilson (490 Norton), *President's Cup and Gold Medal.*
(2) H. Adam (M.A.G. Morgan), *Gold Medal.*
(3) J. Dix (557 B.S.A.), *Silver Medal.*
(4) H. Hunter (550 James), *Bronze Medal.*

Okehampton M.C.C.

Twenty-two competitors started on the annual reliability trial to Land's End and back on the 16th inst., when the following awards were made:—

Heavy Solo Machines:—
(1) W. Backway (550 Triumph); (2) E. J. Hosking (976 Zenith); (3) T. Woods (550 Triumph).
Lightweights:—
(1) H. Brooking (349 Verus); (2) A. Terber (211 Levis); (3) P. Cawling (348 Douglas).
Passenger Machines:—
(1) J. G. Durrant (633 Norton sc.); (2) W. H. Newman (976 Royal Enfield sc.).

Mill Hill M.C.C.

Preparations are at present in hand for the formation of a club in this district, and motor cyclists desirous of encouraging the scheme should communicate with Mr. J. H. Woods, of Woods Garage, Daws Lane, Mill Hill, N.W.

North-Western Centre A.C.U.

The open hill-climb which was postponed on July 29th is to take place on September 9th. The entry list has been re-opened and entries can be received by Mr. J. H. Place, "Girsee," 258, Manchester Rd., Burnley, up to September 2nd.

Surrey M.C. and L.C.C.

A team trial was held on the 12th inst. in indifferent weather over a circular course of 27 miles, starting at Wotton Hatch Hotel, near Dorking, the course being covered twice in opposite directions. No team succeeded in finishing complete. Results, subject to confirmation:—1st, Dorking Centre, Team 2 (silver medals), F. P. Venney (500 N.U.T.), F. P. Verney, jnr. (225 Triumph), 7 marks; 2nd, Dorking Centre, Team 1, C. J. Feeny (346 Francis-Barnett), J. B. Phelps (269 A.E.L.), 24 marks; 3rd, Farnborough Centre, P. J. Broadhurst (499 Sunbeam), S. W. Mansell (499 Rover), 51 marks.

Petersfield and District M.C. and L.C.C.

The first hill-climb, which took place on the 6th inst. at Hyden Hill, Eastmeon, over a measured mile, was quite successful. Five hundred spectators attended. Thirty members participated in the event, there being sixty entries in the eight classes. The winners of the various classes were as follows:—

250 c.c. Solo:—
(1) McArdell (247 Levis), 1m. 52s.
(2) B. Mould (239 James), 2m. 39s.

350 c.c. Solo:—
(1) R. Blagg (293 New Imperial), 1m. 36⅕s.
(2) D. Fairbairn (348 Raleigh), 1m. 49⅘s.

500 c.c. Solo:—
(1) A. Moss (494 Douglas), 1m. 21⅗s.
(2) W. S. Luker (490 Norton), 1m. 24s.

750 c.c. Solo:—
(1) W. S. Luker (490 Norton), 1m. 20⅖s.
(2) Bannister (481 Scott Squirrel), 1m. 26⅖s.

1,000 c.c. Solo:—
(1) W. S. Luker (490 Norton), 1m. 19s.
(2) Bannister (481 Scott Squirrel), 1m. 24⅖s.

750 c.c. Sidecar:—
(1) R. Chitty (678 Martinsyde sc.), 1m. 52⅖s.
(2) D. Fairbairn (665 Ariel sc.), 1m. 54⅕s.

1,000 c.c. Sidecar:—
(1) R. Chitty (678 Martinsyde sc.), 1m. 52s.
(2) D. Fairbairn (665 Ariel sc.), 1m. 54⅕s.

Bradford M.C. and L.C.C.

In the recent International trials the following represented the club as a team:—
Hugh Gibson (349 Raleigh), Clifford Wilson (654 Quadrant), and Charles Sidney (349 Raleigh).

Bath and West of England M.C.

The club held a successful hill-climb at Bannerdown Hill on Saturday, Augnst 12th. Fastest time of the day was made by V. Anstice (733 Douglas), who covered the 686 yards course in 17⅖s. The winners of three premier awards were: Solo Class (Fuller cup), E. W. Spencer (494 Douglas), time 18s. Sidecar Class (Colmer cup), V. Anstice (595 Douglas sc.), time 22½s. Amateur Class (5 guinea prize), G. McWatters (490 Norton), time 20s. The results for the remaining classes are as follows:

CLASS 1.—S. Gill (249 New Imperial), 25⅘s. (bronze medal).
C5377 2.—S. Gill (349 Weatherell), 25⅖s. (bronze medal).
CLASS 3.—G. McWatters (490 Norton), 20s. (silver medal).

SIDECAR CLASSES.

CLASS 15.—G. H. Tucker (490 Norton sc.) tied with V. Anstice (595 Douglas) for first place, time 26⅗s., and Tucker was awarded a bronze medal on formula.
CLASS 16.—V. Anstice (595 Douglas sc.), 22½s.
CLASS 18.—G. H. Tucker (490 Norton sc.), 26⅘s. (bronze medal).
CLASS 19.—V. Anstice (595 Douglas sc.), 21⅘s. (silver medal); G. H. Tucker (490 Norton sc.), 26s. (bronze medal).
CLASS 22.—G. McWatters (490 Norton sc.), 29⅖s. (bronze medal).
E. W. Spencer (494 Douglas), 21s. (silver medal).
CLASS 4.—V. Anstice (595 Douglas), 17⅗s. (silver medal); E. W. Spencer (494 Douglas), 18⅗s. (bronze medal).
CLASS 5.—S. Gill (249 New Imperial), 26s. (bronze medal).
CLASS 6.—L. Bird (348 Douglas) tied with S. Gill (349 Weatherell), 29s. S. Gill won bronze medal on formula.
CLASS 7.—G. McWatters (490 Norton), 20⅘s. (gold medal); E. C. Collins (490 Norton), 22⅖s. (silver medal). R. Houghton (492 Sunbeam) tied with F. W. May (500 James) for third place with 24s. May won bronze medal on formula.
CLASS 8.—E. W. Spencer (494 Douglas), 18s. (silver medal); V. Anstice (494 Douglas), 18⅕s. (bronze medal).
CLASS 11.—G. McWatters (490 Norton), 20⅗s. (silver medal); R. Houghton (492 Sunbeam), 22⅘s. (bronze medal).
CLASS 12.—G. McWatters (490 Norton) 20⅘s. (silver medal); R. Houghton (492 Sunbeam), 22⅘s. (bronze medal).

RACING AT PORTMARNOCK.

A VERY successful meeting was run off by the Leinster Motor Cycle at the Velvet Strand, at Portmarnock, on Saturday last, when a programme of five races was decided. The feature of the meeting was the consistent riding of J. G. Burney (225 Royal Enfield), who was placed in the four solo classes, winning two of them. The back-markers were asked to give away rather too much, and none of them got placed. T. E. Greene (494 Douglas) was the fastest of the cracks, but he was never nearer than fifth in the final placings.

Results:—

SIX MILES (TWO-STROKE UP TO 300 C.C.).
1. R. Humphreys (220 Velocette), 55s.
2. T. F. Slavin (220 Velocette), scr.
3. J. G. Burney (225 Royal Enfield), 75s.
Time, 9m. 35s. (actual).

SIX MILES (ALL TYPES UP TO 350 C.C.).
1. J. G. Burney (225 Royal Enfield), 2m.
2. S. Woods (348 Cotton), owes 90s.
3. T. F. Broderick (211 Levis), 2m. 10s.
Won by 250 yds. Time, 10m. 30s.

TEN MILES (UP TO 600 C.C.).
1. C. Briggs (550 Triumph), 4½m.
2. J. G. Burney (225 Royal Enfield), 7½m.
3. S. Woods (348 Cotton), 55s.
Won by 30 yds. Time, 15m. 25s.

TWENTY MILES (UNLIMITED).
1. J. G. Burney (225 Royal Enfield), 15m.
2. C. Briggs (550 Triumph), 9m.
3. S. Gill (348 Douglas), 16m.
Time, 34m. 30s.

SIX MILES (SIDECARS, UNLIMITED).
1. C. D. Maguire (976 Matchless sc.), 20s.
2. E. F. Ashton (998 Indian sc.), scr.
3. P. Smith (998 Indian sc.), 25s.
Won easily. Time, 8m. 37s.

RESULTS OF NORTH WALES OPEN TRIAL.

MORE detailed results of the North Wales Centre A.C.U. Open Trial than were available when our report was prepared for last week's issue are now to hand.

It will be observed that J. Westwood Wills (547 Powell), who gained the premier and other awards, has now also been awarded the centre championship prize. This award was first made to another rider—Wills Welsh residence qualification being under discussion.

The full provisional results are as follows:—

Open Challenge Cup.—J. Westwood Wills (547 Powell).

Open Amateur Cup.—G. F. Burns (499 Sunbeam).

Powell Challenge Cup.—J. W. Wills (547 Powell).

Centre Championship.—J. W. Wills (547 Powell).

Cup for N.W.M.C.C. Amateur.—G. F. Burnes (499 Sunbeam).

Cup for 250 c.c. solo machine.—Bert Kershaw (249 New Imperial).

Cup for 350 c.c. solo machine.—C. M. Jones (349 Diamond, B. and S.).

Cup for 500 c.c. solo machine.—W. J. Kellet (499 Sunbeam).

Novice prize.—C. M. Jones (349 Diamond, B. and S.).

Passenger machine prize.—H. F. S. Morgan (980 Morgan).

Trade Team.—W. Edwards No. 2 Team: W. Edwards (547 Powell), S. W. Smith (532 Scott), A. E. Hughes (550 Triumph).

Club Team.—N.W.M.C.C. No. 2 Team: W. J. Kellet (499 Sunbeam), J. W. Davies (499 Sunbeam), R. R. Bromley (499 Sunbeam).

Gold Medals.—J. W. Wills (547 Powell), W. J. Kellet (499 Sunbeam), W. J. Williams (700 Raleigh), A. R. Evans (499 Sunbeam), G. F. Burns (499 Sunbeam), H. S. F. Morgan (980 Morgan).

Silver Medals.—R. Edwards (598 Beardmore-Precision), J. Knowles (499 Triumph).

Bronze Medals.—J. O. Jones (499 Triumph), A. S. Jones (482 Scott-Squirrel), W. Edwards (547 Powell), S. W. Smith (532 Scott), D. E. Hughes (550 Triumph), J. H. Davies (499 Sunbeam), G. B. Richards (499 Triumph), Miss Cottle (550 Triumph), G. L. Falck (499 Rover), A. Colcombe (596 Indian), C. M. Jones (349 Diamond-B. and S.), B. Kershaw (249 New Imperial), W. J. Astley (499 Triumph), R. O. Hughes (349 Raleigh), R. R. Bromley (499 Sunbeam), H. J. Greathead (348 Ivy), H. Price (547 Powell), H. Pennington (547 Powell).

The A.C.U. Six Days Reliability Trials 1922

YORKSHIRE -- WALES BROOKLANDS

Early Stages of this Week's Big Endurance Test. Over 140 Competitors.

JUST as the T.T. is the biggest motor cycle speed event of the year, so the A.C.U. Six Days Trials form the most important reliability event.

Nominally they started on Monday last, but actually most of the competitors felt that they, anyhow, had "gone over the bags" just as soon as they handed over their machines to the care of the A.C.U. on the previous day.

Sunday in York (the starting point) was a busy day, but before going on to describe what happened and what it brought forth, it may be well to recapitulate the story of the trials generally. Briefly, there are five days of road work at, mostly, a 20 m.p.h. schedule, finishing on Friday; then, to see how the competing machines have retained their tune, high speed tests will be held at Brooklands on Saturday; and, finally, an examination of general condition will be undertaken. The road portion, without being freakish, is sufficiently stiff to be a very severe trial in itself; the speed and condition tests are expected to prove the last straw on the camel's back in quite a number of cases.

142 Competitors.

To return to the preliminaries, 142 of the 144 entrants presented themselves for the long drawn-out business of having their machines weighed, examined, and sealed. Most of the riders took things very seriously, and a considerable amount of apprehension was felt about the following day's run.

Although the trials provide manufacturers with every opportunity of trying out new designs under conditions of great publicity, they are not so freely used for this purpose as they might be.

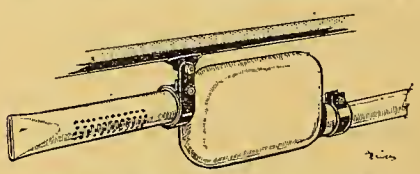
This is to be regretted, because the lessons learned during the week's strenuous testing are sufficiently in advance of the Olympia Show to enable any modifications found necessary to be incorporated in the next year's models.

New "350 c.c." Single.

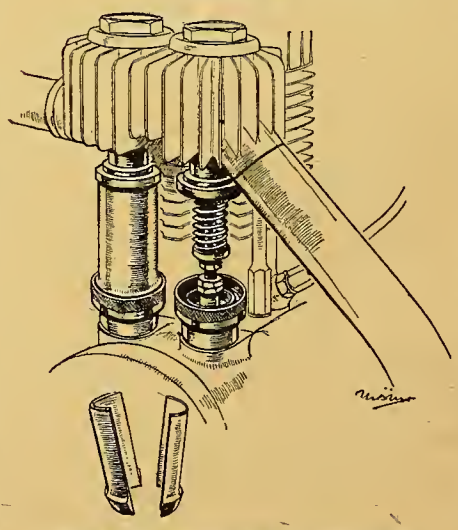
The James Cycle Company has evidently appreciated the Six Days in the light of an instructive test of this description and its entry includes a departure from its usual range of models in a 349 c.c. single-cylinder four-stroke, on examples of which J. Lidstone and G. Kimberley are mounted.

In appearance the new James lightweight singles are as distinctive as the other products of the same factory. The engine is of the inside flywheel variety, with side-by-side valves, the springs of which are enclosed in plated cases, as on the big-twin engine. The drive is by chain throughout, a James three-speed gear box with hand and foot clutch control and kick-starter. The finish is the usual black, with brown tank lined in red and gold.

In the same class is the Raleigh, a new chain-driven model of which made its first appearance. Undoubtedly the popularity which the chain-cum-belt Raleighs have attained will be enhanced by the adoption of a chain-driven specimen, especially for harder work or sidecar pulling.



An aluminium silencer, fitted with drilled fish tail, is bolted to the chain stay of the Francis-Barnett.



Split detachable valve spring covers on the new single-cylinder James lightweight.

Increased Popularity of Chain Transmission. 1923 Models under Test.

Much attention was focussed on the smaller mounts, which are becoming more and more popular. It is to be regretted, however, that two-strokes were not more fully represented amongst the starters. Nevertheless the two oldest two-stroke names, Levis and Connaught, were well upheld, the former by three chain-driven 247 c.c. models of standard design (two looking rather "naked" with their exposed magneto chains), and the latter by a team of three solos and a sidecar outfit. Two of the solo Connaughts and the sidecar are more or less new models. The engine dimensions of 76 × 77 mm. (348 c.c.) are new to this make, and the tank has been modified in shape and finish. Chain drive and three-speed Burman gears are fitted, and altogether the appearance is workmanlike and substantial.

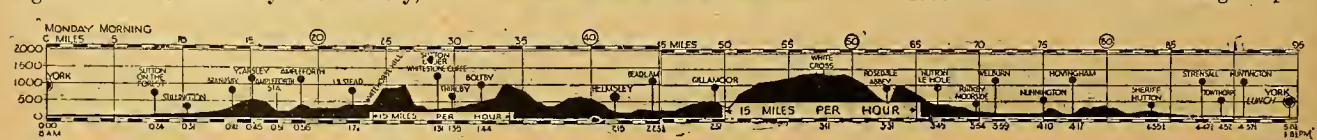
Other two-strokes in the trials are the rotary-valved Sun-Vitesse, the Allon, the Radco, the O.K.-Juniors, and the 500 c.c. Dunelt, but the latter are represented by a sidecar outfit this year. Moss three-speed gears with chain drive are being used on the Sun-Vitesse and O.K. Junior machines, while the Allon is now fitted with a Sturmey-Archer three-speed box and chain-cum-belt drive. Specially commendable is the fact that the Allons are absolutely standard models, even to the footboards and leg-shields.

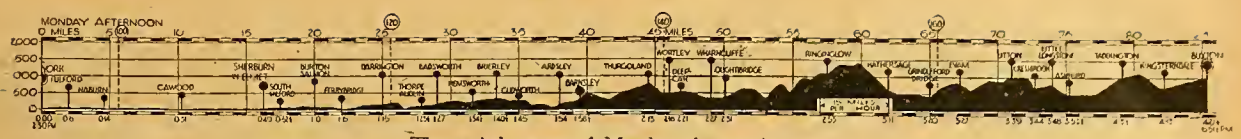
A Super Solo Mount.

Probably no machine attracted greater crowds of admirers at the weighing-in than George Brough's new 80 m.p.h. (guaranteed!) 976 c.c. special sports model Brough-Superior. It is a glistening mass of plating and polished aluminium. The exhaust pipes are connected to the ports by large finned castings, and the expansion chambers at the extreme ends are of stream-line bulbous formation. The saddle position is only 27 inches from the ground.

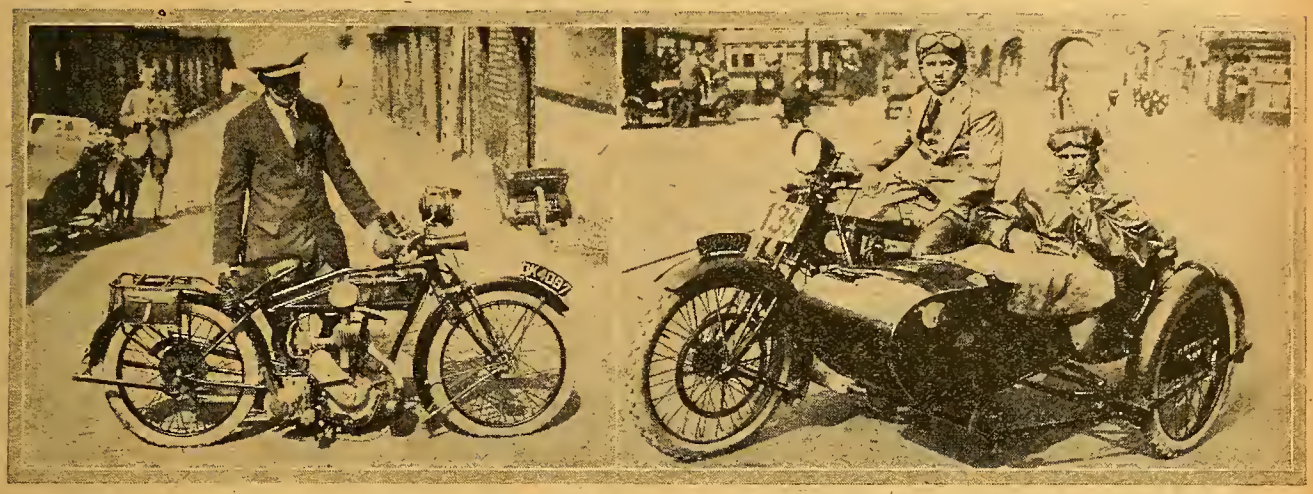
Brettell's Connaught sidecar has been mentioned, and is the only competitor in the same class as M. C. Breese, who is driving a 349 c.c. Blackburne-engined Weatherall.

Re-designed cylinders with deeper fins are being used on the Ariel and Rudge singles, but the remaining machines in this class show little change or modification. The P. and M. machine, it was noticed, had been fitted with additional foot control for the change speed





The varied nature of Monday afternoon's route.



J. Lidstone and the new and attractively designed 349 c.c. James.

F. Smith, who is piloting the 925 c.c. Clyno sidecar.

mechanism, and an innovation on the twin B.S.A. is a foot-operated front brake. On this machine, also, the growing tendency to mount the handle-bar rigidly on the head lug is followed. In-

J. Westwood Wills and the 547 c.c. chain-driven Powell.

cidentally, this practice is, among others, adopted on the Connaught, Sunbeam, the new Grindley, the Brough Superior, and the Coventry Eagle.

A True Lightweight.

Easily the smallest machine entered, the 169 c.c. J.E.S. two-stroke is a real lightweight of diminutive size. Its rider, R. P. Purnell, felt somewhat handicapped by the absence of a clutch, but the little mount is equipped with a four-speed constant mesh gear box giving a lowest ratio of 18 to 1; the transmission is by chain throughout. If this machine survives the week a few failures on the worst hills would be no discredit to it.

Silencing Systems.

There was every evidence, as the machines were presented for examination, that few people were anxious to lose marks for inefficient silencing.

Raleigh lightweights had a very complete system, using a transverse silencer under the magneto, a long pipe, a further expansion chamber, and finally a fish-tail. Westwood Wills' Powell carried an Argus silencer at the end of a huge "drain pipe" exhaust, and G. E. Austin had another Argus silencer adapted to take the twin exhaust pipes of his Coventry Victor. Carbjector silencers were the equipment on the Allon two-strokes, while Harry Reed's big Dot sidecar had an enormous expansion chamber secured to the carrier stays. Unusual and somewhat diverse exhaust systems were to be seen on the Beardmore-Precisions, J. M. Philpotts' machine having a long pipe which branched into two at its farther end, the outlets being restricted by the insertion of smaller tubes. Neat aluminium expansion boxes were fitted to the Francis-Barnett sporting models.

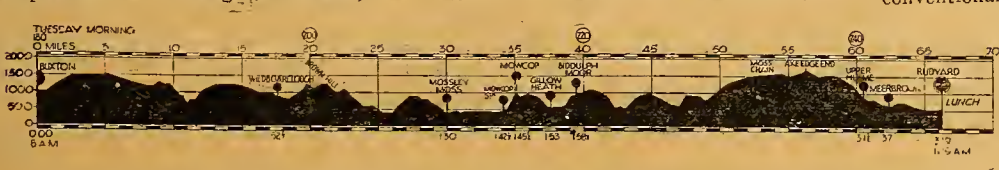
New "Assembled" Mount.

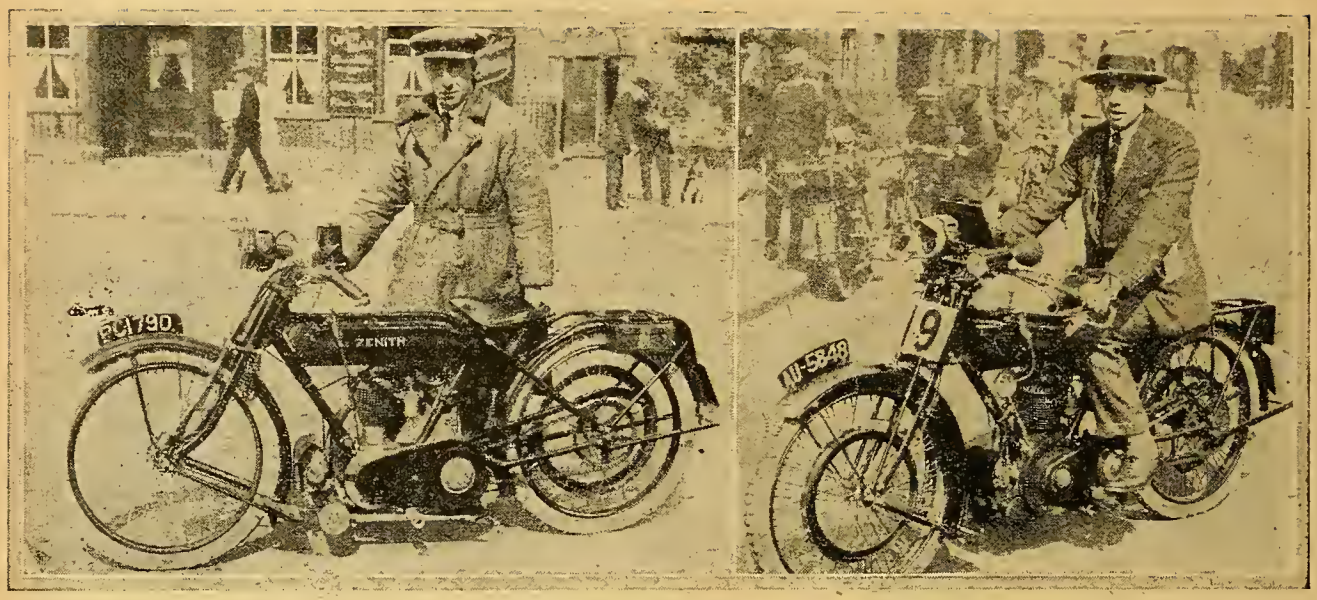
A late-comer at the weighing-in was the Grindley sporting machine, equipped with

One of the new chain-driven Allons, three of which are entered.

a 249 c.c. J.A.P. engine. Nothing unconventional distinguishes this mount, which embodies well-tried components, but its graceful lines and the unusually large tyres (28×3 in.) give it an attractive appearance. It is made by the Grindley Motor Co., of Prees, Salop.

Few innovations in trans-





ADVANCE 1923 MODELS.

One of the two 349 c.c. single cylinder chain driven Zeniths.

W. H. Hadfield, who is riding the 348 c.c. all-chain driven Raleigh.

mission or brakework were to be seen, but most of the machines in the Trials have three-speed gears and all-chain drive. Four speeds, however, were to be found on the J.E.S., Clayton Russell's, 633 c.c. Norton sidecar (Dureff four-speed chain gear box), the P. and M.'s, the Dot, and the Morgan runabouts. Examination of the sidecars did not bring to light any startlingly new or unusual features; indeed the general tendency to make the actual connections rigid in the plane of the greatest stress almost indicated a lack of any real inspiration in sidecar chassis design; whether the end of the week will bring a tale of frame and chassis fractures remains to be seen, but in one or two instances it might be predicted.

Most of the "big" sidecars—Ariel, Matchless, Harley-Davidson, Brough Superior, A.J.S., Bradbury, Martinsyde, Zenith, Chater-Lea, Clyno, James, Excelsior, and Indian—are standard models, and it is noteworthy that they mostly carry one or more spare wheels, one of which is equipped with chains.

Runabouts Well Represented.

Contesting with the sidecars are a Scott Sociable and Morgan, L.S.D. and T.B. runabouts. At the conclusion of the Trials much comparative material as to the rival merits of these types will be available.

The only known non-starters were G. Packman (349 P. and M.) and G. E. Cuffe (698 Metro-Tyler).

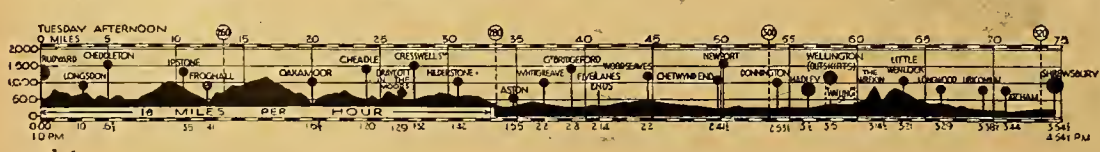
Apart from one or two alterations in gear ratio—usually denied by the riders concerned, who argue that their erring lower gears are counteracted by larger tyres—the only changes on the list of competitors published last week are:—R. Evans is riding in place of Hugh Gibson (Raleigh); C. W. Hough in place of Eric Williams (A.J.S.); B. E. Browning in place of P. N. Hills (Royal Ruby); and C. Bourlet in place of C. Dickenson (Ariel).

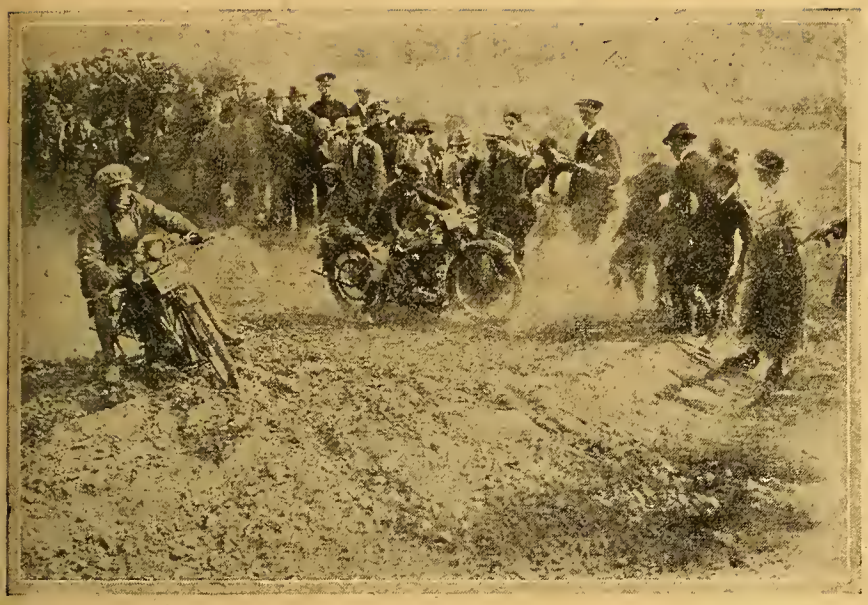
Only one machine was changed: J. H. Davies, the North Wales representative in the premiership competition, decided to ride a 492 c.c. T.T. Sunbeam in place of a 599 c.c. model.

Drivers with their machines and passengers reporting to the chief marshal last Sunday afternoon at York.

Many and varied were the magneto protections against water-splashes, from a handful of grease on some, a sponge bag to a complete wrapping of old inner tube on another.

The Martinsyde sidecars are reputed to have 21.8 to 1 bottom gears.





Two 350 c.c. soloists in the "rough" on Rosedale Abbey Bank, H. F. Harris (A.J.S.) and Mrs. Janson (Coventry Eagle).

MONDAY'S RUN, 179¾ MILES.

York, Stillington, Ampleforth, Thirlby, Helmsley, Gillamoor, Kirkby Moorside, Hovingham, Strensall, York (lunch), Naburn, Cawood, Brierley, Barnsley, Ringinglow, Ashford, Buxton.

Really gorgeous summer sunshine graced the start of Monday's run, the first of the Six Days' Trials.

For the first twelve miles level going in a northerly direction was encountered, but the Hambleton Hills loomed in the distance.

The White Horse.

Five or six miles of undulating lanes with a surprising frequency of blind corners next ensued. All the time the riders could see ahead of them the "white horse" which gives its name to the first test hill of the day. Cut out of the heather so that the white shingle shows through, the tremendous representation of a horse dominates that flank of the hills on which Sutton Bank lies on the more northward side.

Near the foot of the hill a rather severe hairpin had to be negotiated, but the hill itself was scarcely worth observation. Most modern solos, and some of the sidecar models should have taken it in their stride on middle gear. Nevertheless, there were many failures, almost all due to indifferent driving.

Stage Fright.

Of course, the first hill in a trial always finds the riders in a state of stage fright, and it is this must account for the poor performances of many, yet it is unbelievable that old and seasoned competition riders should commit such blunders as to "cut" unknown hairpins and to commence prodding with their feet when there is no earthly need to loose balance on merely mildly stony surfaces.

White Horse Hill belied the rumours of the Sunday evening; its texture alternated between sandy path and quite inconsiderable sandstone boulders, much more pleasant to ride over than, say, certain portions of the Finchley Road out of London! The hill is perhaps about a mile in length.

On the upper part H. F. Harris and C. W. Hough made the ascents which gained most applause from the spectators; they were fast and neat. Mrs. Knowles, on a similar machine, made a remarkably good steady climb.

Bert Kershaw, whose luck surely is out this last few weeks, ran his New Imperial up the bank. Dance and Bennett (Sunbeams) treated the gradient contemptuously, and "T.T.'ed" up, but Bennett got into a bad cleft in the rocks and wobbled a little.

A Wonderful Miniature.

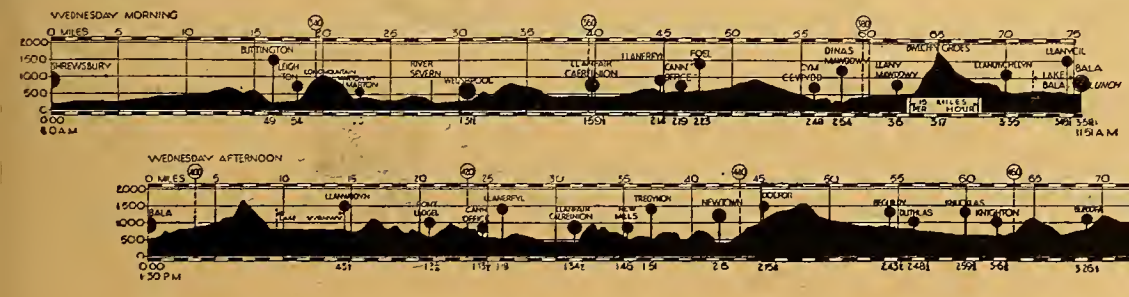
R. P. Purnell made a wonderfully good ascent on his 169 c.c. J.E.S., and the Levis and Sun-Vitesse machines generally did well. Of the Allons, R. Cooper was noticeably the fastest of the three, but W. Johnson hung on to middle gear right up to the worst part.

Two Scott riders, W. Moore and W. Scott, did not trouble to take the hairpin wide; knowing what they could do they simply "cut" it at speed, going over the worst gradient. T. Peck, one of the solo Ariel riders, attempting the same feat, ran into the bank.

Lightweights attacking White Horse Hill at speed. J. Johnson (247 Sun-Vitesse) and R. Evans (348 Raleigh), followed by F. W. Applebee (247 Levis).

Particularly nice ascents were made by F. W. Becker (688 McKechnie), G. Brough (976 Brough Superior), L. Horton (249 New Imperial), P. L. Mayo (249 Coventry-Eagle), and C. L. Sprosen (348 Connaught).

The first sidecar up was the 349 c.c.



Yesterday's routes. The morning included Bwlch-y-Groes

Solo machines after tackling the worst portion of the Rosedale climb. The riders are: J. Lidstone on the new 350 c.c. James, P. N. Hills (349 Royal Ruby), H. M. Beedon (499 Sunbeam), and E. Searle (349 Sheffield.-Henderson).

Weatherall, driven by M. C. Breese, and it climbed quite well.

Most of the single cylinder sidecars did well, and they were not depending on non-skid chains; with the big twins, however, quite another story must be told, for all of the following stopped: R. Swanton (998 Indian sc.), baulking V. F. Long (976 Excelsior sc.), H. H. S. Harris (799 A.J.S. sc.), G. E. Minnett (750 Bradbury sc.), P. Platt (750 Bradbury sc.), F. Cottom (749 James sc.), and T. J. Ross (993 Matchless sc.).

Three-wheelers Score.

The most impressive sidecar ascents were those of the Martinsyde team, but undoubtedly the three Morgans, the T.B., and the L.S.D., outclassed all the other passenger machines. H. F. S. Morgan, indeed, made a wonderful show in avoiding stopped or failing sidecars, as also did W. E. Grange (750 Bradbury sc.).

A diversion was provided by the Scott Sociable, which speeded up the hill with the spare wheel bouncing behind, trailed by a few yards of strap; it was ultimately hauled in like a lifebelt by the crew.

From White Horse, Sutton Bank was descended (with caution); and after some Colonial going Boltby Bank was ascended. The latter hill is a second-gear climb in point of gradient, but has a very vile surface, dry but exceedingly rough. So also was the moorland track which followed, it seemed, for miles and miles. 15 m.p.h. was the schedule speed for this section, and it was none too low.

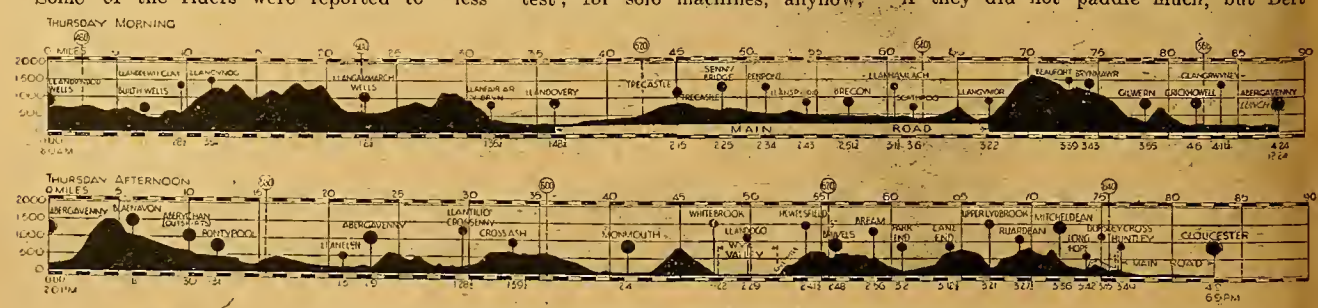
Some of the riders were reported to have visited Rosedale Abbey Bank on the previous day and to have compiled charts of its safe passages and dangerous shoals. It is that sort of hill, but curiously enough the people who conquered it recompensed controllability and an ample reserve of power, almost every time.

Hundreds of spectators had foregathered to watch the fun, when A. R. Edwards (247 Levis) appeared and regis-

F. C. North piloting his 292 c.c. O.K. up Rosedale Abbey Bank. He did not stop to light his pipe.

tered a very creditable temporary failure not very far from the summit. J. Wilkins (249 New Imperial) and G. S. Davison (247 Levis) both waved their legs if they did not paddle much, but Bert its dry but treacherous surface and banked cross-gulleys were as often or not those who had never seen it before.

One cannot say that it was a "useless" test; for solo machines, anyhow,



Six Days' Trials.—Kershaw (249 New Imperial) made a clean climb in the full sense of the phrase. Until he fell, P. L. Mayo (249 Coventry Eagle) was very steady, and L. Horton (249 New Imperial) only stopped his road wheels when he grounded.

Mrs. Knowles (349 A.J.S.) came to a stop at the same spot, but soon got going again. Non-stop, but more or less erratic, journeys—sometimes hampered by other outright failures—were made by G. Lovegrove (247 Radco), L. E. Clulee (292 Allon), W. Johnson (297 Allon), R. M. Knowles (490 Norton), S. M. Greening (346 Francis-Barnett), E. A. Barnett (346 Francis-Barnett) and F. C. North (292 O.K. Junior).

Loud cheers greeted R. P. Purnell's J.E.S., which did well until it stopped for a little while. Bridcutt's and Cathrick's Dunelts got mixed up in a heap, while Parkes' and Bishop's Sun-Vitesses wormed past very cleverly. The Grindley romped up to lie down, and R. Cooper broke the belt of his Allon. Hall and Handley on the remaining O.K.'s made very excellent climbs, without touching with their feet.

Eric Williams' substitute on the A.J.S.—C. W. Hough—got cheers in mistake, but eventually earned them, passing Mrs. Janson (Coventry Eagle), who had to be assisted after a fall on the first corner. A new chain-driven Raleigh in the hands of W. H. Hadfield, who only footed once, was very fast, as was H. F. Harris (A.J.S.), who wobbled somewhat, however.

A Star Ascent.

The Sunbeam solo team was led by Dance, who made a magnificent climb; Bennett tried to provide an *encore*, but skidded right round on the fatal gulley; and their third man, C. Greenwood, footed.

One of the new lightweight James—G. Kimberley's—made an unblemished ascent, and Lidstone on the other was quite fair. The 349 c.c. Zeniths were less fortunate, but neither actually stopped. E. H. Gifford (496 Martinsyde) did not do nearly so well as he usually does, nor did H. Greaves (349 Beardmore-B. and S.).

Three Scotts came next—ridden by W. Scott, G. Hill, and W. Moore—and all made imposing climbs; one unfortunately stopped higher up in a sporting attempt to avoid a baulk.

A. Rollason (Ariel), E. Foster (698 Raleigh), and E. S. Burnett (698 Raleigh) all reached the upper gulley before footing; and about the same time Westwood Wills (Powell) recorded another of the rare, non-footing journeys. R. P. Ranson (Lea-Francis) fell spectacularly, and his *confrère*, A. Lea, somehow also got mixed up with a bunch of failures. For a few minutes all was chaos. G. E. Austin (Coventry Victor) joined the melee, and Cross (499 Triumph) was fortunate in being able to worm past. Bainbridge (Martinsyde) failed to emulate Cross, but T. Buckle (748 F.N.) glided through the throng in an extraordinary manner to stop higher up.

Things cleared a little for J. A. Newman (Douglas), and he kept his feet on the rests all the way up. In an endeavour to hug the left side of the road, J. H. Davis (492 Sunbeam) edged a party of spectators down the hill-side, and J. M. Philpot (598 Beardmore) followed, erratically but quite well, the path that Davis had so effectively cleared. D. H. Davidson (596 Indian Scout) and W. D. Pugh (989 Harley-D.) were probably the last solo riders to make anything approximating a really good showing, although the bigger twins of George Brough (Brough-Superior) and E. J. Kehoe

Sidecars on Rosedale Abbey Bank. The A.C.U. included this hill in the 1920 trial, but at the last moment decided against its inclusion.

Cooling the tyres after Rosedale Abbey Bank. A. W. Hadley (499 Rudge sidecar) negotiating the watersplash at Hutton-le-Hole.

(Rudge) were at least as effective as the majority of the lightweights—but they were not nearly so suitable for the task in front of them.

To attempt to describe the sidecar performances in detail would prove nothing.

Passenger Machines on Rosedale.

The three P. and M.'s were as good as any; the Harley-Davidsons and one of the Indians—despite, in each case, a fairly high low gear—were excellent. F. W. Giles's A.J.S. was wonderful, and Freeley's and Mundey's New Hudson outfits also stood out from the ruck. None of the Sunbeams appeared to have enough weight on their front wheels, and the Matchlesses, except G. D. Hardee's, were not up to their usual pitch. W. H. Bashall's Martinsyde did not require assistance, nor did J. H. Walker's B.S.A. until the sidecar apron became mixed up with the wheel. A 494 c.c. Douglas outfit, driven by J. W. Wildblood, just scraped to the summit, where to the general disappointment it, too, stopped. Wade's A.J.S. was almost as good as Giles's; and L. Newey (Ariel) was easily best of his team.

The Scott Sociable shed its passenger; but the three-wheelers with central rear drive were, without exception, in faultless fettle. These were: H. F. S. Morgan (Morgan), W. Carr (Morgan-Anzani), S. Hall (Morgan-M.A.G.), F. S. Spouse (T.B.), and G. W. Shepherd (L.S.D.).

After passing the Chimney at Rosedale Summit, a mile or two of moderately "colonial" surface brought the competitors to Hutton-le-Hole, which has two watersplashes in its street; these did not cause any trouble, however. Thence from Kirkby Moorside, through Hovingham and Strensall, to York was plain sailing.

Straightforward Afternoon's Run.

In the afternoon, apart from the number of corners, the route, until the outskirts of Sheffield were reached, was entirely over top gear roads, a small observed hill, Stainboro' Low, near Barnsley, being of no account.

Between Oughtibridge and Hathersage there was a considerable amount of climbing, with corresponding deep descents, but the much-rumoured teaser near Ringinglow proved to be dead easy.

Descending from the moors to Hathersage a rough-surfaced patch nearly unseated many as it was encountered with a comparatively easy moorland road on which fair speed could be attained. Before reaching Buxton, Litton Slack was seen, over a wall, and the gateway at the foot of Cowdale was passed. It seemed strange to go so near those famous test hills without actually scaling them.

Despite the easy nature of the afternoon's run, memories of the morning made the banner, "Buxton Welcomes the A.C.U.," a truly thankful sight.

A new gate change, mounted in a bracket incorporated in the gear box frame clamp, is being tested on Clayton-Russell's Dureff four-speed box.

* * * *

W. H. Hardman's old Wilkin has a 550 c.c. Blackburne cylinder head on its 499 c.c. engine.

At the start Wills' Powell, with its white-painted tyres, looked like a London taxi.

* * * *

W. A. Carr's Morgan has an o.h.v. Anzani engine which is remarkably silenced.

* * * *

Glorious sunshine made the leather coat brigade look unfashionable—but, he laughs best who . . .

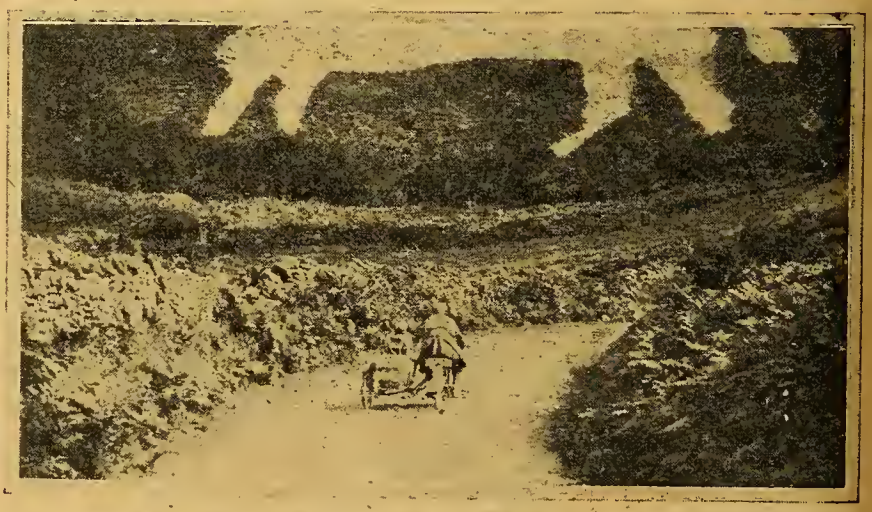
Searle's Sheffield-Henderson, although a side-valve model, has a foot-operated oil-pump.

TUESDAY'S RUN, 140¾ MILES.

Buxton, Mossley Moss, Mowcop, Biddulph Moor, Axe Edge End, Rudyard (lunch), Ipstone, Cheadle, Hilderstone, Aston, Gt. Bridgeford, Newport, Wellington, Longwood, Uriconium, Shrewsbury.

Again there were prospects of fine weather, and only a very small minority were unable to take the road for the long run westwards to Shrewsbury.

The route for the day was planned largely by Dr. C. H. Hopwood, who rode a Levis in the T.T. He assures us that in the afternoon there were 297 corners (including 100 hairpins). Certainly bends were the predominant feature, their number and surprising variety making the twenty-mile average difficult in the extreme.



J. Harrison-Watson, 550 c.c. Triumph with Toronda sidecar, on White Horse Hill. The landmark from which the hill is named is seen in the background.

ANGLO-DUTCH TRIAL ARRANGEMENTS.

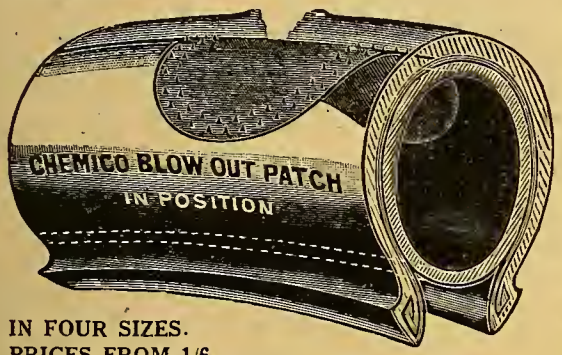
IT would appear from the present state of affairs that the Anglo-Dutch Trial is likely to fizzle out, as the Eastern Centre, which the A.C.U. requested to organise the trial so far as this country is concerned, look upon the event as one which should be a matter for the A.C.U., and even at this date no definite details are available. Pending a further arrangement, entries should be sent to Mr. D. Stuart, hon. sec., Eastern Centre, A.C.U., Holme Villa, Algers Road, Loughton, Essex, before September 1st.

MEND A BURST

SIMPLY, QUICKLY, AND EFFECTIVELY WITH A

"CHEMICO" BLOW-OUT PATCH.

A thoroughly reliable emergency patch which should be included in every motor cyclist's and motorist's equipment. Instantly attached—perfect grip which strengthens under pressure—no solution—no mess—no waiting.



IN FOUR SIZES.
PRICES FROM 1/6

The picture tells the story——

No instructions to follow.

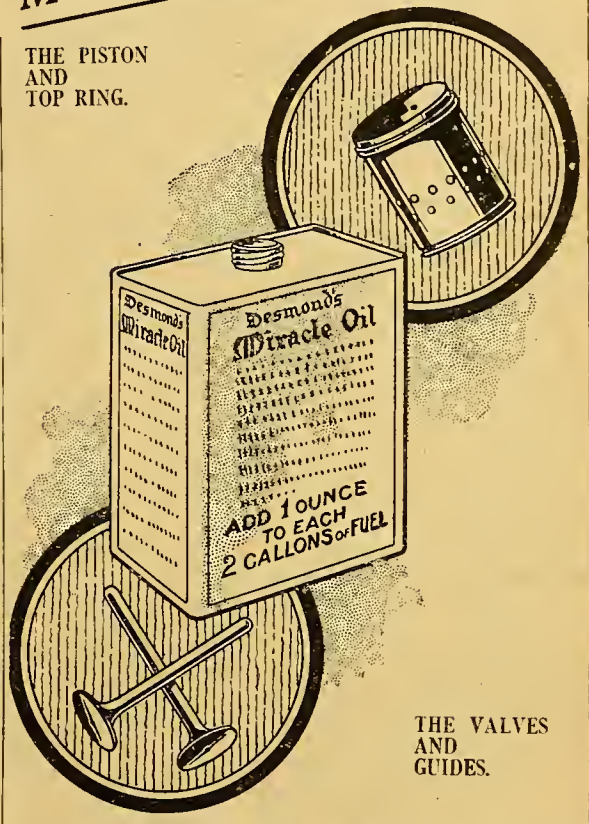
Desmond's
Miracle Oil
A Revelation in Lubrication

Miracle Oil Lubricates!

THE PISTON AND TOP RING.



THE VALVES AND GUIDES.

Upper Cylinder Lubrication Gives Astounding Engine Efficiency.

Half ounce MIRACLE OIL added to every gallon of fuel you put in your tank, conditions the engine in a most remarkable manner.

Its super-lubricant qualities perfectly lubricate upper end of cylinder, piston rings, valve stems and guides, producing a most wonderful surface on both cylinder and rings, thereby improving compression and preventing wear, eliminating sticking or squeaking valves.

For sleeve valve engines the effect of its regular use is wonderful.

An engine conditioned by the use of "MIRACLE OIL" develops more power, runs much smoother, uses less ordinary oil (about one-half), will require less fuel, and consequently travel more miles per gallon; will cost less for overhaul as MIRACLE OIL arrests wear and tear, and limits carbon deposit.

MIRACLE OIL is not a fuel dope; it is a super-lubricant, which conditions an engine, thereby effecting savings greatly in excess of its cost.

Something to think about!

BEHIND this famous House is a big reputation for fair dealing and good service. The Birmingham House for Motorists was created by its founder the late Mr. P. J. Evans on these principles.

* * * * *

To-day this House exists to maintain those principles and reputation which made its founder famous from Land's End to John o' Groats. Service and Value—always.

* * * * *

The fine array of motor cycles awaiting your inspection includes every leading make. Expert impartial advice is yours for the asking. Call, write, or 'phone to-day.

* * * * *

A.J.S., ENFIELD, TRIUMPH, NORTON, INDIAN, HUMBER, JAMES, B.S.A., ROVER, NEW IMPERIAL, EDMUND, MASSEY, ARIEL, DOUGLAS.

WHY WORRY ABOUT WET WEATHER ?

Here is your Safeguard—

MOTOR CYCLE SUIT
With Plaited Leather Belt.

GUARANTEED WATERPROOF

SPECIFICATION

MADE from hard-wearing double texture material with an interlining of Rubber. Double Breasted Jacket, with all-round Belt and Leather Buckle, large Patch Pockets, and converted collar to button right up to neck, to fasten with Throat Tab. Wind Cuffs in sleeves. All seams of the Suit are rubber cemented and taped with extra material, making the garment absolutely waterproof. Overall Trousers with spat - shaped leg; wind gussets to keep the wind from the leg and boots; fastened with patent clasp fasteners, enabling the trousers to be pulled off in a moment. The suits are newly manufactured, and every care is taken with details so that the garment will meet the severest test. We give full guarantee that this suit is thoroughly waterproof, and impervious to the most drenching & continuous downpour.

THESE SUITS ARE NEWLY MADE FROM FRESHLY PROOFED MATERIAL BY EXPERIENCED WORKMEN, AND NOT HALF PERISHED CLEARANCE LINES OR W.D. SURPLUS.

PRICE **35/-**

NO EXTRA CHARGE FOR CARRIAGE.

State chest measurement and height when ordering.

SUIT WITH SEATLESS TROUSERS (as above)	42/-
JACKET ONLY	25/-
SEATLESS TROUSERS ONLY	18/-

Reflections Upon the Six Days Trials.

NO more interesting or instructive six days trials have been held than last week's Auto Cycle Union event, embracing Yorkshire, the Peak district, Wales, and Brooklands. It was the sixteenth of the A.C.U. series. As if the varied road test of 830 miles were not sufficient to bring out the weak spots of any machine, a final twenty-five laps of Brooklands at minimum set speeds served to test the engines and lubrication systems to the uttermost. That so many machines survived the ordeal (no less than 80 qualified for gold medals) is the more significant to those acquainted with the various test hills introduced, for few trials have presented so many compressed difficulties in the space of six days. There was no relief from start to finish. The first two days, for instance, were each the equal of the most severe one-day trial, and on Wednesday the ascents of Bwlch-y-Groes and the Hirnant Pass were not to be despised. Generally speaking, the most outstanding achievements could be claimed by the smaller machines, for the 250 c.c. and 350 c.c. mounts were throughout conspicuously good performers, no hill being too much for them, whilst their track speeds on the last day were an eye-opener to many. Next in order of merit, considering classes as a whole, we should place the three-wheeled runabouts, only one of which retired.

A.C.U. six days events have been notoriously severe except in 1921, protests being the result. This year, however, there was a noticeable absence of complaint, Rosedale Abbey Bank almost alone arousing the ire of men who were mounted on standard machines. Their contention that surface alone spelt success or otherwise was supported by the exhibition on the steeper gradient of Alms Hill, Henley-on-Thames, one of the final climbs on Friday afternoon. Here, despite a gradient of 1 in 3, most of those who essayed the climb were successful, 250 and 350 c.c. lightweights again publicly demonstrating that solo mounts of this size are wholly reliable and of the "go-anywhere" type.

Chiefly, the retirements may be divided into three classes: (1) transmission troubles, (2) broken frames, and (3) accidents. A large proportion of the last-mentioned were due to the tortuous nature of the course and insufficient braking power. The speed test was responsible for six retirements, two at least due to the front tyre leaving the rim.

No one type of machine suffered more than another so far as the hill-climbing was concerned, for representatives of all types made outstanding performances.

Three points only may be subject for discussion among competitors: (1) The hotel arrangements *en route*; (2) the wheel slip rule on hills which was difficult to put into operation fairly; and (3) the front wheel stand clause. It will be recalled that many competitors in the Stock Machine Trial were disqualified on the last-mentioned count, and those who fitted stands specially in the present case may well ask whether those who did not conform to the rule will be disqualified.

Condition at the finish is an important matter from the prospective buyer's point of view, and it may definitely be stated that the mechanical condition of the engines and machines generally was never better than this year. The track speeds were really remarkable considering the length of the speed test and the fact that it followed immediately upon a long and difficult road test offering no respite. It was good that so much country was embraced, for a great deal of useful propaganda has been accomplished; public interest was most marked throughout.

An index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

BY "IXION"

Those Small Makes.

AN unfortunate reader purchased a motor cycle of a little-known make, and on delivery found the steering was rather stiff. After much worry he dismantled the steering head and found that the top half of the lower ball race had been completely omitted by the erector, together with two of the balls. On complaining to the makers, he received a *postcard*, which I copy verbatim:—

"Dr. Sir,—Your letter to hand. In our opinion the ball race had been overhardened and split up gradually disintegrating *en route*. This opinion is confirmed by the absence of the other balls.

"Yrs. faithfully,
"——."

There is a delicious air of attachment about this postcard which pleases me enormously. The matter is treated purely and simply as a technical problem, apart from all sordid considerations of £ s. d. or such personal matters as inconvenience to the owner. It reminds me of the chemist whose medicine poisoned the sick wife. When the irate husband sent a lawyer's letter complaining that 10 grains of arsenic had been put in a tonic, the chemist replied: "Yours of the —th inst. to hand. You are in error. It was strychnine, not arsenic."

The Single Sleeve Valve.

I AM at present riding an engine which many good judges regard as likely to prove the pleasantest power unit on the road—the Barr & Stroud single sleeve valve. It is much too new and stiff to have developed its real running, but is already very likeable. Well silenced and freed from the clack of the usual valve gear, it slides along very amiably, the faint tuttering of the exhaust being the only noise apart from the incurable hum of the front chain and a fainter undercurrent of sound which I ascribe to the sleeve-operating mechanism. A couple of kicks suffice to ungum the brand-new sleeve each morning, and, when once warmed up, the engine is extraordinarily free. The compression release valve makes an unusual noise when opened, reminiscent of the similar valve on a baby two-stroke, but nevertheless distinctive; a twitch of the valve lever is useful to warn pedestrians in traffic. While the engine is running itself in, its chief peculiarity by comparison with more familiar types is the phenomenally dogged way in which it slogs uphill at a countable rate of popping. Not for many, many years have I sat over an engine which went on pulling quite smoothly down to such incredibly low r.p.m. It is mounted in a Beardmore-Precision frame, and the pair make a most attractive combination.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Three Squirrels.

DURING the summer I have ridden three separate Scott Squirrels, two of which were supplied to humble and obscure persons in the ordinary way of business, and—much to the credit of the firm—were quite as hot as another delivered to our staff. When riding them a mute wonder assails me as to how they lost the T.T. For if they are possibly a mile or two slower than two or three ginger four-strokes along the open straight, their road-holding and control qualities make them simply invincible over roads which bend and undulate. I am a timid old fogey nowadays, but I can make any rider on any machine stretch himself when I tackle him over average or freak roads on a Squirrel. I suppose the explanation of their failure to lick the four-strokes in the Isle of Man is ignitional (another nice, new word). After all, when you have an explosion at every revolution, and are revving for hours and hours at about 4,000 r.p.m., the poor plug does not have much chance to dispose of the flames which lick it so continuously. But at least one plug merchant informs me that by 1924 he will have a plug which will remain cool and black in the jet of a welding blowpipe; so the Scotts will be out for blood, one presumes, in the 1923 race. In the meantime they remain the hottest and most comfortable lightweights on the road—for all this trio of Squirrels come out at under 200 lb.

Mechanical Flash Lamps.

A YEAR ago I penned some notes anent the chain or handle-operated type of flash lamps, which substitute a geared dynamo for the usual dry cell, and claim to be "inexhaustible." A shower of samples rained upon the office in response, and I promised to report in due course. I never like to look a gift horse in the mouth, but frankly I am not enthusiastic about either their economy or their reliability. The makers have been very good in repairing them gratis, but the pick of the basket has revisited

Occasional Comments.—

its birthplace thrice in the year. My heart is sour towards it, because I trusted to it in arriving at a favourite camping ground after dark; and I had hardly started to collect wood for a fire to cook my supper when its gears jammed. I now carry the dry cell type of flash; it is lighter, cheaper, and more reliable.

Signposting Through Towns.

ISN'T it time that motor cyclists began to make themselves felt in municipal administration? I have already ridden 6,000 miles this year, and in town after town I notice an absolute lack of any clear signs to direct the through traveller, some of the largest towns being the very worst offenders. The motoring associations do comparatively little to assist, perhaps because their members are largely car owners, and a car can so conveniently pause for enquiries. A stoppage is annoying to a motor cyclist who would wish to ride on serenely into, say, Manchester, until a large sign, "To Liverpool," caught his eye. In a few weeks town councillors will be seeking our votes. Couldn't we ginger some of them to attend to the matter? Incidentally, there are many towns which would benefit themselves as well as their visitors, since through signposting would switch a lot of traffic down bye-pass routes and relieve ancient streets which are far too narrow to be safe or convenient. This is the twentieth century. There is not a town in the country which is not traversed by hundreds or thousands of through travellers every year. Yet there is hardly a single town through which a stranger can find his way without considerable assistance. Even if the signs are in order, his experience of other towns makes the tourist so doubtful that he generally stops to enquire "between signs." I hope the A.C.U. awarded their £100 to a suggestion on these lines. Personally, as an everyday rider, I would not grudge any reasonable subscription to a body which would get this urgent job well done.

A Trap Somewhere?

I GET some funny letters.

The latest to hand runs thusly:—"Dear Ixion,—Is a 4 h.p. twin more powerful than a 4 h.p. single?"

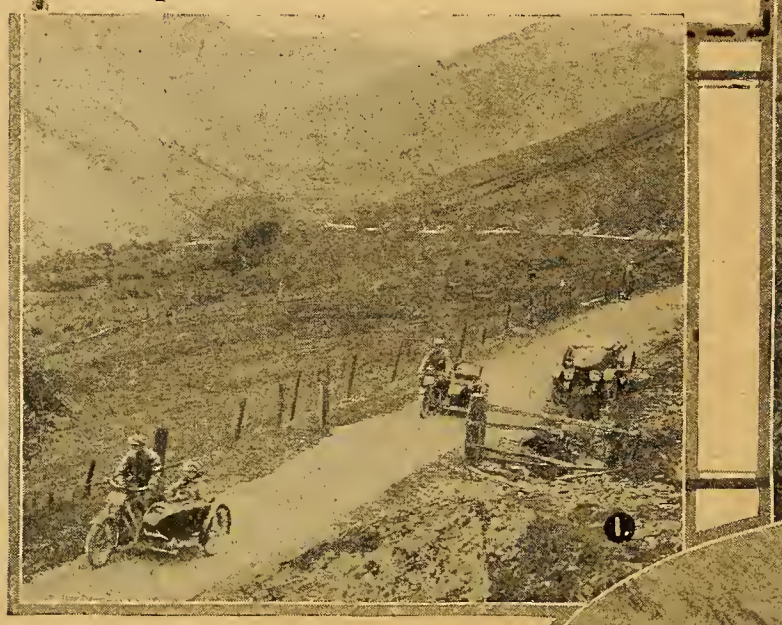
I will adopt the Socratic method, and reply by asking whether a pound of aviation spirit is lighter than a pound of Castrol R? But perhaps the questioner is not trying to pull my leg after all. In which case the answer is that with which papa always begins when sonny puts a poser, viz., "It all depends." If the 4 h.p. be maximum b.h.p. in both cases, the two engines are of equal horse-power. If on the contrary the 4 h.p. is a merely nominal rating, either of the two engines may be considerably more powerful than the other. It all depends who designed them, and with what end in view.

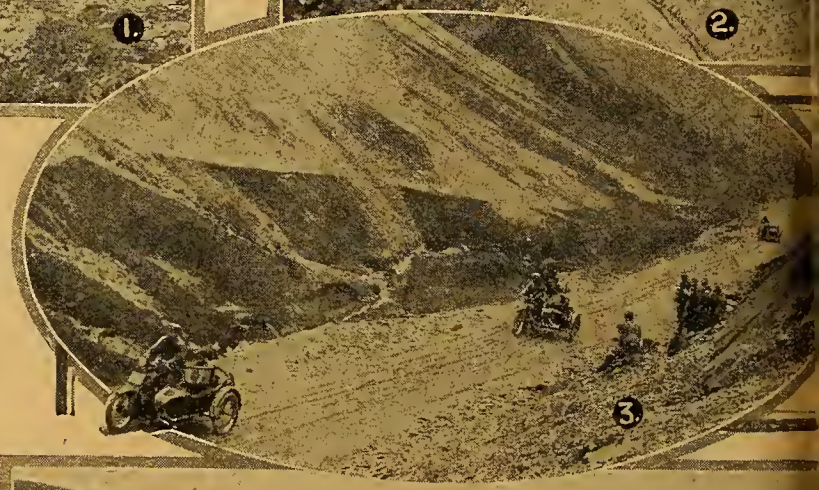
THE INDEPENDENT SPORTSMAN. In the pursuit of sports and pastimes the sidecar owner has an ever-ready aid to his pleasure. The golfer living in town can reach the links without irksome train or 'bus travel, the cricketer, too, becomes independent of all hired transport.

A Genuine Scandal.

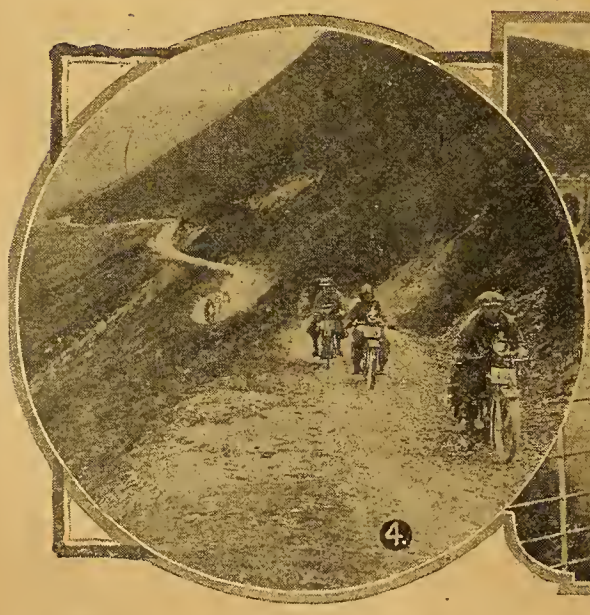
WHEN you spend £175 in hard cash for a brand new passenger outfit of reputed first grade, you expect good value. One of my friends laid out this sum, and was almost immediately troubled with misfiring. When he began to investigate the sparking plugs, he found they were W.D. disposal type, and part of a cheap line which has been handed on to the trade at 9s. per dozen plugs, wholesale. Within a week the American cloth seat cushion proceeded to crack. Finally, though he bombarded the firm with a letter, a registered letter, and a wire in the order named, over three weeks elapsed before they took any notice of his complaint; and even now they have not presented him with a new cushion or two new plugs.

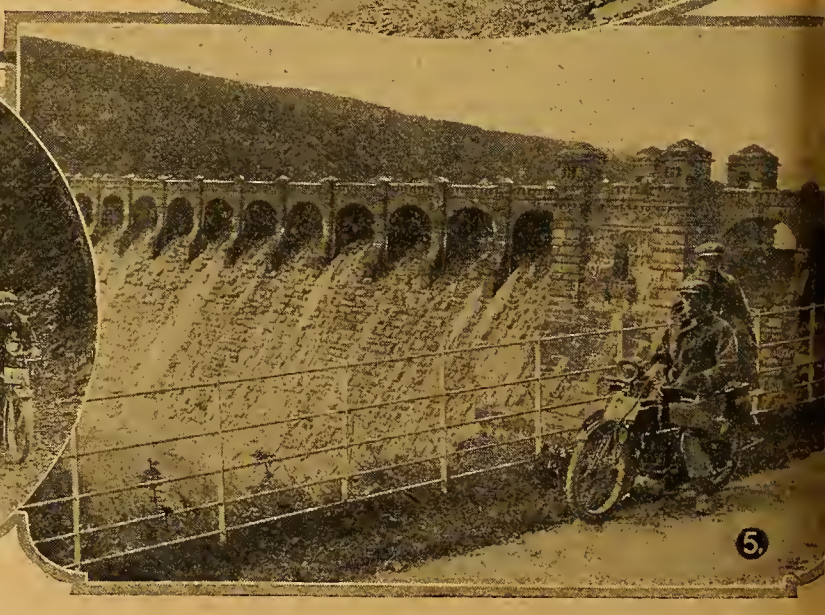
The "Six Days" Epitomised in Pictures.





1. B. Burke (595 New Hudson sidecar) R. Brown (599 Sunbeam sidecar) making light of Bwlch-y-Groes. 2. P. L. Mayo (249 Coventry Eagle) S. M. Greening (346 Francis-Barnett) and R. Cooper (292 Allon) on the Long Mountain. 3. Another view of Bwlch-y-Groes. F. W. Giles (799 A. J. S. sidecar) and W. Bucknell (993 Matchless sidecar). 4. A trio of solo riders on Hirnant Pass. E. A. Barnett and S. M. Greening on 346 c.c. Francis-Barnett's and W. H. Hadfield (348 Raleigh). 5. The great dam at Lake Vyrnwy. G. Kimberley (349 James) has a cigarette by the way.





(6). H. F. S. Morgan (978 Morgan) making a fast ascent of Bwlch-y-Groes. (7). R. P. Ranson (494 Lea-Francis) and J. L. Hanman (494 Douglas) at the bend on Whiston Hill. (8). TWENTY YEARS RIDING

1902—1½ h.p. Minerva. 1922—7 h.p. A.J.S. sidecar.

A Motor Cyclist Discusses many Mounts he has used since the days of the Werner.

AS an enthusiastic motor cyclist I find it interesting to look back upon machines I have owned and to notice the evolution which has taken place for a period extending over a number of years.

When photography and riding are combined an illuminating record can be preserved.

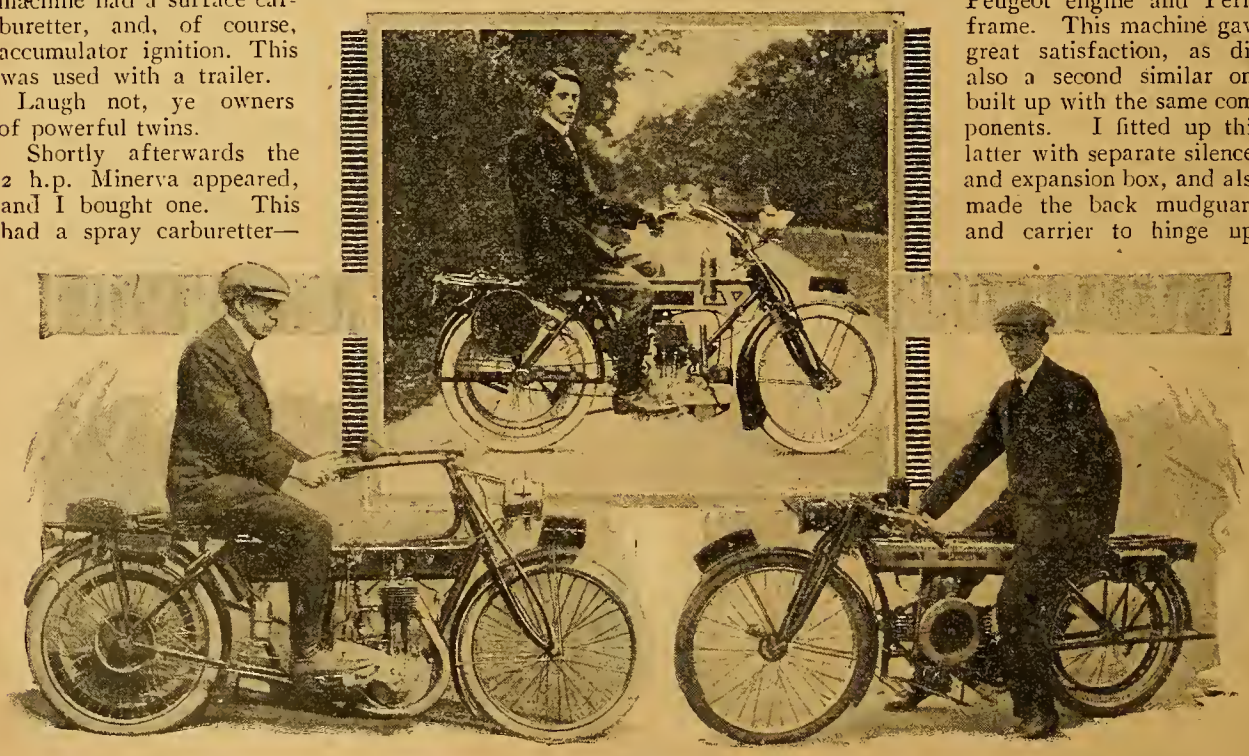
After various tentative trials on a 2¾ h.p. motor tricycle and a Werner front-driven motor bicycle, I first invested in a 1½ h.p. Minerva bicycle. This machine had a surface carburetter, and, of course, accumulator ignition. This was used with a trailer.

Laugh not, ye owners of powerful twins.

Shortly afterwards the 2 h.p. Minerva appeared, and I bought one. This had a spray carburetter—but the frames of both these Minervas were as high as a corresponding pedal cycle, and very unpleasant when cornering.

Locally Built Machines.

It is interesting to remember that when these machines were in use, number plates were unknown, licences not required, and petrol cost about 11d. per gallon. Horse-power was then increasing, and my next 'bus was built up for me locally with a 3½ h.p. Peugeot engine and Perry frame. This machine gave great satisfaction, as did also a second similar one built up with the same components. I fitted up this latter with separate silencer and expansion box, and also made the back mudguard and carrier to hinge up,



(Left). 1907—4 h.p. 2-speed Roc. (Top). 1911—3½ h.p. single geared Bradbury. (Right). 1913—2¾ h.p. 2-speed Douglas.

Twenty Years' Riding.—

thus affording easy access to the tyre for repairs. It seems a pity that present-day machines do not embody this feature when detachable wheels are not fitted. These Peugeot machines were built with much lower frames, and a great increase in stability resulted.

The old wicker sidecar shown attached to one of these machines was the first I owned—a very light affair, affording scant protection to the passenger. Well do I remember pushing off the outfit when starting, as there was no clutch, and only a single gear!

It is interesting to compare this with my present A.J.S. outfit—there being an interval of over ten years between them.

Pedalling Gear Abandoned.

The next machine—a 4 h.p. Roc, with two speeds and handle starting, was quite an advance in design, and was my first in which pedalling gear was eliminated. The seat position was the lowest I have ever experienced.

Following the Roc, I got a 3½ h.p. Bradbury, which I believe was in 1911. This outfit showed the great advance which had taken place in engine balance about that time.

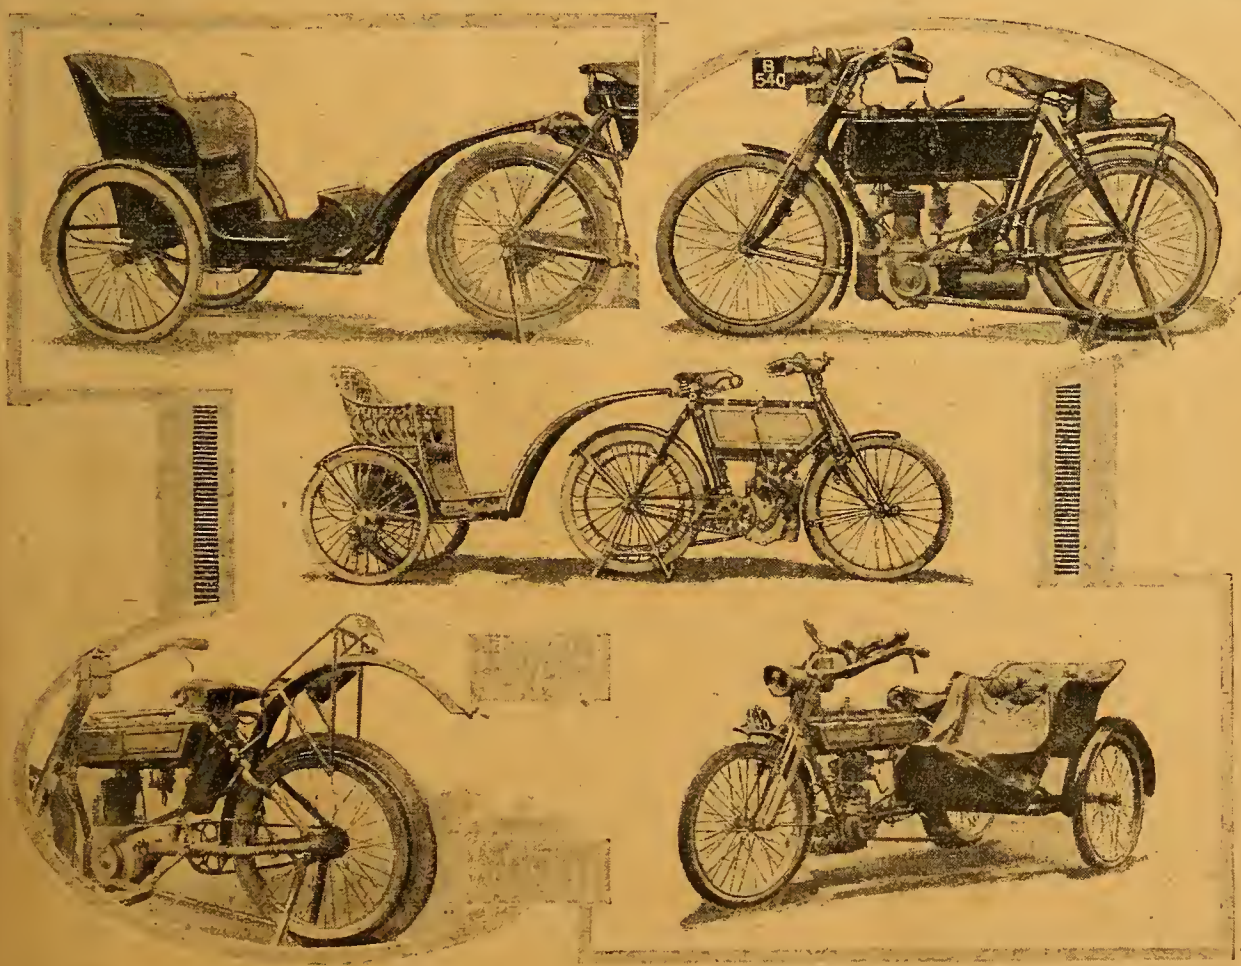
In 1913 I got a 2¾ h.p. Douglas, and immediately became enthusiastic over this handy little mount.

Between the Douglas and the next motor cycle, three light cars were owned, my present mount, a 7 h.p. A.J.S. sidecar, being then obtained. This machine afforded some interesting comparisons with the light cars, especialy as regards cooling and engine lubrication.

A Prophecy.

In my opinion, the future heavyweight will have an open frame, and a large pan seat, affording some support to the small of one's back, also enabling ordinary clothing to be worn. A steel pressing would extend up to the steering head, and the sides carried out for leg protectors as in the A.B.C. machine. The driver would then enjoy a little more comfort, as well as the sidecar passenger. It will be an interesting study to note future evolution, especially when the lessons learnt with aircraft design come to be even more adapted to motor cycle design than they are at present.

C. W. STILLMAN.



Coachbuilt trailer used with the 3½ h.p. Peugeot.

1903-4—3½ h.p. Peugeot built to the rider's specification.

1902-3—A 2 h.p. Minerva, with engine on the front down tube, to which was attached a wicker trailer.

1905-6—A Peugeot fitted with a hinged rear mudguard.

The Peugeot was the first of the writer's sidecar machines.

A MOTOR CYCLIST'S COUNTRY DIARY.

An Old Farmer's Views. School Children and their Sport. A Game of Hide and Seek.

By J. FAIRFAX BLAKEBOROUGH.

SOMEONE remarked the other day that sailing away on a good straight road, with the wind behind one, provided a sensation which he imagined could only be likened to that of a hawk in its "stoop"—as the downward journey to seize its prey is called in technical sporting language.

Those who have had much experience with aeroplanes and are also motor cyclists, aver that the sensation of motion through the air is quite different in the respective methods of locomotion. There is somehow a closer intimacy and a greater feeling of being a part of the vehicle in the case of the motor cycle than in that of the 'plane. A flying man once expressed this rather neatly when he said, "When I'm in my 'bus (why do aeronauts call their 'planes 'busses?) I feel to a certain extent dependent on *it*; when I'm on my motor bike I feel that it is to a great extent dependent upon *me*."

"He chose to be antagonistic."

At a Wayside Inn.

We called at a wayside inn the other day for lunch, and whilst we waited for the ham and eggs—always ham and eggs in isolated districts which only see a butcher once a week—we entered into conversation with one of the "corner sitters," whom one invariably finds at these rural hostelries. He chose to be antagonistic, and was not long in informing us that he considered all motor cyclists under a cloud. "We had a young farmer's son near here who had yan o' them motor bikes," he began, "and he took a young lass with him behind. They had a smash up—ran into a wall or summat. He sold his machine but, if you believe me, he's bought another, which we thinks is a scandal . . . In fact, it's the talk of the country how he can show his face on one again. They're going to be the ruination of half the young farmers is motor bikes. They go fleeing about the country instead of stopping at home and looking after things."

I ventured to suggest that if the accident had happened to the unfortunate young lady whilst she was being driven in a trap it would not have been considered against either sentiment or decency for the driver to have continued to be interested in horses and in driving and riding them. But the man in the corner couldn't see that the cases were at all analogous, and was firmly convinced that the growth of motor cyclists amongst the agricultural community boded ill for farming and was likely to unfit the coming generation for hard work.

We ate our ham and eggs amidst a continued stream of anathemas against motor cycles and motor cyclists, which at first was inclined to be amusing, but which eventually became irritating, and as we left we were cautioned not to "kill any of the school bairns," who, we were told, would be "laiking (playing) on t'road." Sure enough we *did* come across the school children, who had eaten their dinners, despite the cold, under the protection of a hedge where now lay their baskets. They were an excited group on the broad strip of grass on which their fathers and mothers had played before them, and, as one is never quite sure what either children or pigs will do when near a highway, we slowed down to pass them.

Cruel Sport of the Young.

Then our curiosity was aroused. There was a terrier in the midst of the children, obviously trying to worry something amid the plaudits and encouragement of the onlookers. So we pulled up—how much some motor cyclists miss on their rides by making "non-stop runs" almost an article of faith! It was a hedgehog the little terrier was endeavouring to kill—a "pricky back hotchen" as these children called him. They had found him amongst the dead leaves in a ditch, and the terrier turning up opportunely they had "set him on."

Talk about the peaceful country and all its refining influences! I know of nothing capable of much more systematic cruelty than the average village boy! Well, the dog's little nose was sorely pricked with the hedgehog's quills and, turn him over as he would, the dog couldn't catch hold of the animal's nose—which was his aim. Knowing that the end would be a game of football with the inoffensive "hotchen," I gathered him up in my handkerchief, to the surprise of the children and amid the protestations of the dog. Poor little fellow, he's somewhere amongst my strawberry beds now, and will be very useful in the spring as a slug-catcher.

Have you a garden, dear reader? If so, I advise you to bring a hedgehog home when you come across one during a country ride. It is a great asset in a garden, and an interesting little animal into the bargain.

Gypsies eat them and consider their lily-white flesh a delicacy after being enclosed in wet clay and put into a stick fire till baked. I once tasted them at a gypsy

Motor Cyclist's Country Diary.—camp high up on the Hambleton Hills—the home of the still more fascinating badger. We do funny things in our part of rural England (Yorkshire), and it is not at all uncommon to see our village butcher bringing a sheep or a calf to the slaughter in his sidecar. A snapshot of him with the not very accurate description, "Taking a sheep for an airing" appeared recently in a local paper, and rumour hath it that some old maids in this district immediately transferred their custom to such a "nice, kind, humane butcher," and even proposed an illuminated address.

"Never sure what children or pigs will do!"

Progressive Young Farmers.

I know of quite a number of young farmers who now daily use their sidecar to carry corn and cake to sheep and horses running out in pastures some distance from the homestead. One of these left it till rather late a few nights ago and was surprised to find on turning down the field road (which led to nowhere except turnipland and pasture) that he was being followed by another motor cyclist. On slowing up prior to arriving at the gate of the sheep field the other cyclist arrived on the scene and also pulled up. There was a mutual stare of astonishment and a mutual recognition. The second M.C. was a police sergeant from a neighbouring market town who was following up—or *had been* following up—a "suspect" on a motor cycle, and had been sure our innocent sheep-feeding friend was his man, and that a chase over hedge and field was in store for him in the dusk. Probably the intrepid sergeant was more relieved than otherwise; for his task was not likely to have been a pleasant one.

A Dog Story.

So much for the game of hide and seek on motor cycles along country roads which are a series of never-ending S's. You'll see from the foregoing we do have a little excitement of sorts in village life. This incident provided us with talk for two days—indeed till the vicar's wife's barking Pom was run over by the Squire's young son who rides his motor bike like the very—(bad word!). We all prayed most devoutly that it would never recover—but, bless your life, it's more cocky and persistent in its attacks than ever. Of course its days *are* numbered, and whoever is responsible for the good deed eventually will never dine at the vicarage again! However, he will suffer in the general cause of the community.

THE MOTOR CYCLE IN SCANDINAVIA.

Reliability Trials Growing in Favour; British and American Machines.

A SCOTSMAN motor cyclist resident in Sweden sends some interesting notes on the development of the movement in his adopted country.

"Before 1910," he writes, "there were very few motor cyclists, mostly riding F.N., N.S.U., and Durkopp machines. From then onwards to 1914, with the improvements in design, motor cycles and reliability trials became popular. There used to be a 3-day reliability trial over a 900-mile course in the spring. This was a most strenuous trial, and used to be a tussle between a 3 h.p. Enfield and the Wanderer, these two makes being extremely popular at that time.

"Reliability trials have always been popular, and lately short distance speed events run off on the ice have become very fashionable. A couple of the more important reliability trials are run in the late autumn and winter, and very adverse weather and road conditions are often encountered. The severity of these trials when the roads are deep with snow might be realised by the fact that over a 200-mile course the leading competitors may arrive at the finish 8-10 hours after schedule time.

"At the present time almost every machine one sees is of American make; the Swedes are very fond of being astride something big in horse-power ratings, and a lot of solo riding is done on big American twins.

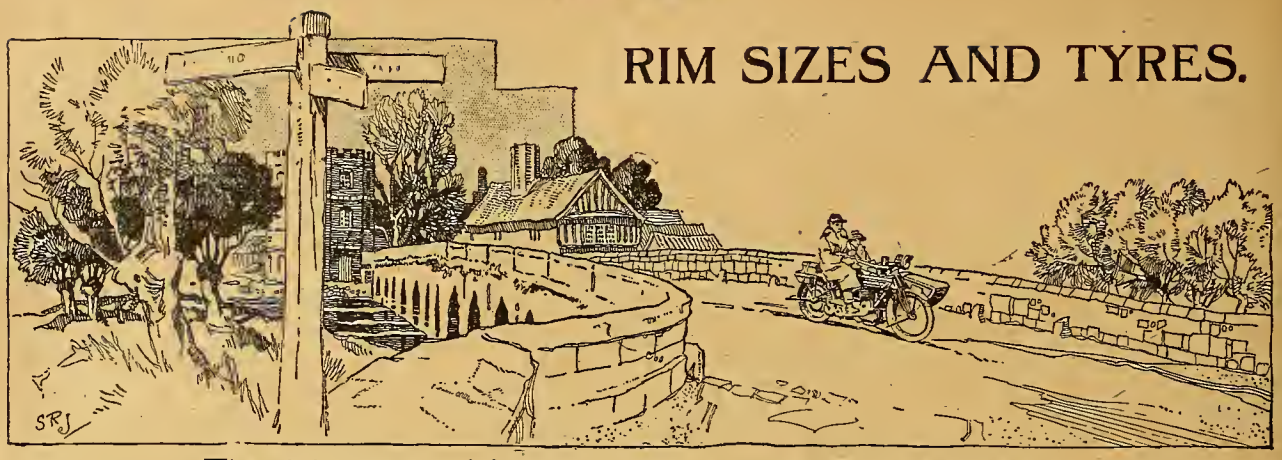
"One of the reasons for this is no doubt the comparatively low price at which American machines can be bought for here, and the consequent good value for money. Machines like the Indian Scout and Reading Standard are sold at £105. On the other hand, some of the agents are asking rather high prices for British machines. Last year the prices of two well-known British singles which were the same in England showed a difference of £40 here.

"The latest model Swedish-built 'Huskvarna' is a first-class machine. With a twin-cylinder engine of 550 c.c., all-chain drive, 3in. tyres, excellent mudguarding, high quality and finish, and attractive appearance, it is sold at £105, and why the Swedes buy equivalent American machines when they can obtain the home-made product at the same price can only be accounted for by their preference for everything foreign.

"On account of the comparatively low price of the American machines, the British manufacturer no doubt finds himself up against hard competition, but the British product has a great reputation for quality, and there is always a market for a high quality article. Sweden has not a big population, but she has plenty of motor cyclists; last year's registration figures show one motor cycle for every 330 inhabitants.

The lightweight is getting more popular, and that is where the British manufacturer should grasp his opportunity, as he has the market almost entirely to himself.

The British machines are known for quality, but what is important for Swedish conditions is: heavy tyres, plenty of clearance in the forks for the fitting of anti-skid chains to the wheels for winter riding, and an oiling system which will work in a temperature much below zero.



RIM SIZES AND TYRES.

The Advantages of Large Tyres Outweigh Their Drawbacks.

AT the present time there seems to be a more or less general realisation of the fact, which has been well-known to many for a long time, that large tyres are a real advantage both in the matter of freedom from punctures and other tyre trouble and in the increased comfort they afford to the rider of a motor cycle.

This new appreciation of large tyres has had a good effect upon the design of 1922 machines, and has caused motor cycles in general to be more adequately shod with sensible tyres than ever before, but this is not all. It has also caused motor cyclists "to sit up and take notice," with the result that many of them, when a new tyre becomes a necessity, are looking around for larger tyres to fit existing rims, provided that their machines have sufficient clearance between the forks and mudguards to allow of these being fitted.

Confusion of Sizes.

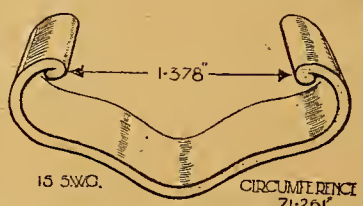
Now there has been in the past, and it is feared that there still is, a large amount of confusion in the standardisation of rims and tyres. It is remarkable, indeed, that in many cases the sizes marked on the tyres were very often not the actual sizes, but were called the nominal sizes, the actual sizes being as a rule less than the nominal; some makers also produced "oversize" tyres for several of the rims.

Further, the tolerances permitted in both rims and tyres were unduly large, and it was never known whether a new tyre would be exceedingly tight and difficult to place in position or quite loose and hardly secure.

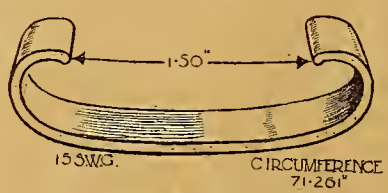
Standard Sizes.

Much discussion took place before the war with the object of remedying this state of things, and doubtless if the war had not set the world back many years there would now be no uncertainty, but, as things are, even now some of the old patterns and sizes are still in use. The results of these deliberations were published by the Engineering Standards Committee in April, 1915, but it was many years before they began to take effect, and they have never come into the general use to which their merits entitle them.

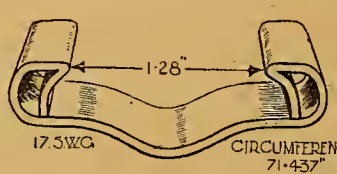
About five years later it was felt that a smaller number of standard sizes would be sufficient to meet all practical requirements, and, although the rim known as D2, which had been introduced in 1915 to take 26 × 2¼, 26 × 2⅜ and 26 × 2½ for 2¼in. tyres, had been generally accepted, a new rim with a round base to accommodate these sizes was put on the market. This rim is known as No. BB, and is of the same circumference as the D2 rim, but is slightly wider.



The D.2 Standard Rim, 26 × 2¼in., 2⅜in., 2½in. for 2¼in.



The B.B. Round Base Rim, 26 × 2¼in., 2⅜in., 2½in. for 2¼in.



The Old 26 × 2¼in. Rim, 26 × 2in., 2¼in., 2⅜in., 2½in. for 2¼in.

Fitting Larger Tyres.

The question now arises as to what course is open to the motor cyclist who wishes to fit larger tyres than those with which his machine was originally equipped. This will, of course, depend entirely upon what rims are built into his wheels and what size his present tyres are. If his rims are No. D2 and his tyres 26 × 2¼in. he can obtain greater comfort by fitting "26 × 2½in. for 2¼in." tyres, but beyond this he cannot go in most makes of tyres. I have known 28 × 3in. tyres to be fitted to the old 2¼in. rim and the D2, which is almost identical with it in circumference but slightly wider between the lips. These 28 × 3in. tyres are made for American rims, and if fitted to the above rims the use of three security bolts is strongly recommended.

On lightweights fitted with 26 × 2in. tyres, 26 × 2¼in. or 26 × 2⅜in. may be mounted on the same rims.

Many tyre manufacturers make 26 × 3in. tyres suitable for the "old size" 26 × 2½in. rim; this rim measured 66½ to 66¾in. in circum-

Rim Sizes and Tyres.—

ference over the bead, which means that they are something like 1½in. less in diameter than the D2 rim, and therefore able to accommodate tyres of a larger section. Also a 700 × 80 mm. tyre can be fitted to a 650 × 65 mm. round base rim, and even 710 × 85 mm. have been fitted on this size of rim.

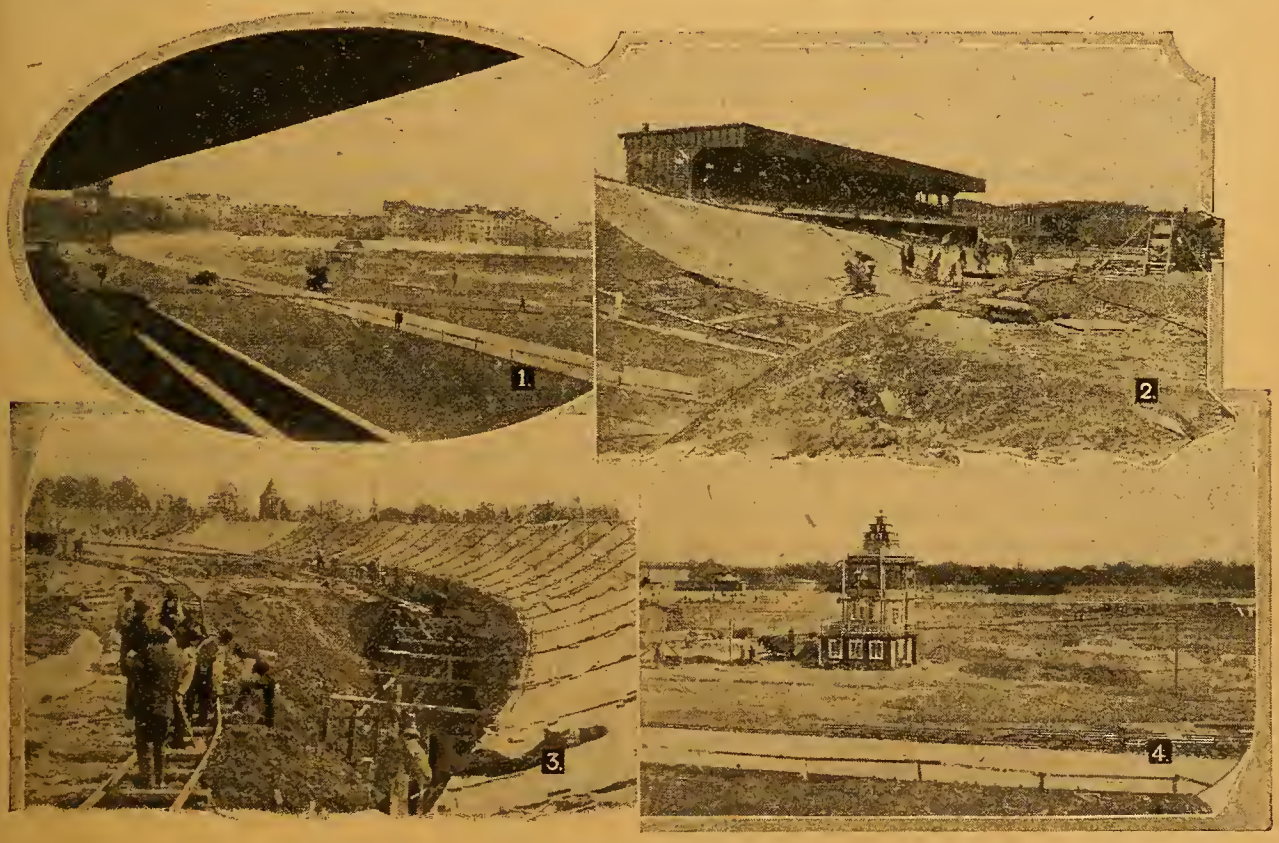
When purposing to fit tyres of larger diameter or section it is strongly recommended that the motor cyclist should write to the tyre makers and send them accurate dimensions of the rims and thus ascertain whether the larger tyre can be fitted in safety. The fork and mudguard clearances should also be carefully noted, for on some machines there is very little room to spare, and a mudguard with a small clearance can easily be blocked with mud to the detriment of the tyre and the running of the machine.

The Advantages of the Bigger Sizes.

The great advantages of the larger tyres are undoubted and very plain to anyone who takes the trouble to give any attention to this point; the larger diameter and circumference cause the wheel to drop a little less into potholes and considerably lessen the effort which is necessary to make the wheel run over an obstruction on the road or rise out of a pothole; the larger section very greatly increases the comfort of the rider and the greater thickness of the tread minimises the liability to puncture to a marked extent. The disadvantages are found in the greater weight of the tyre, a slightly increased tendency to side-slip, and a liability to roll when turning corners; this last is more noticeable on a sidecar outfit than when the bicycle is ridden solo, which perhaps is fortunate, for the slipping which a roll might cause and the unsteady feeling which it produces are of less moment when a sidecar is fitted. Both rolling and the possibility of punctures can be minimised by blowing up the tyres rather harder than would be otherwise necessary, and this also helps to prevent side-slip, but something is lost in the matter of comfort.

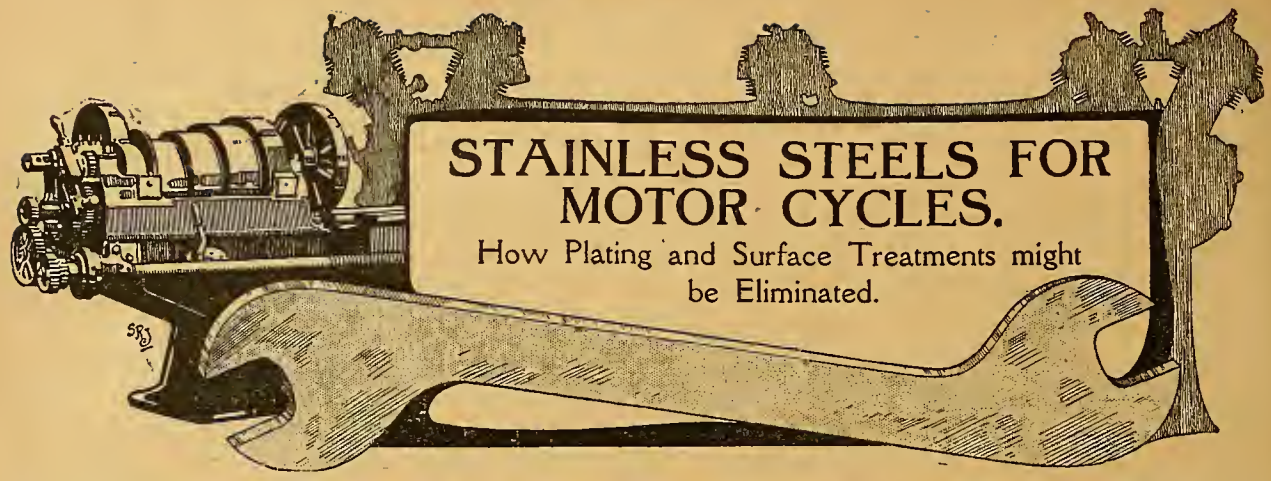
Taken all in all there is no doubt that the advantages far outweigh the disadvantages, and there are even some who maintain that large tyres give an increased comfort to a motor cycle which is comparable to that provided by a spring frame. It is, too, most desirable that as much road shock as possible should be absorbed by the tyre, for in this manner it is not transferred to any part of the machine.

The amount of roll given by big tyres will depend largely upon the rims to which they are fitted; if the rims be wide there will be practically no roll, and it will not be necessary to resort to over-inflation and thus sacrifice comfort, but when they are on narrow rims they must be blown hard. AURIGA.



PREPARING A RACING TRACK.

Czecho-Slovakia is a country where motor cycle racing will soon be afforded the prominence it is given in America. In the U.S.A. special tracks are provided, in which the competitors are always in view of the spectators. The illustrations depict the Prague track under construction. (1). From the grand stand. (2). Laying cement over the wooden base. (3). Showing the trestle supports. (4). The timekeeper's stand.



STAINLESS STEELS FOR MOTOR CYCLES.

How Plating and Surface Treatments might be Eliminated.

ALTHOUGH it is probably true that most people have heard of the stainless steels available on the market to-day, yet many are extremely sceptical about their stainless, or rustless, properties, while others even consider that these steels do not actually exist and that the various names given to them and implying resistance to corrosion are merely clever advertisements employed to hoodwink the greater mass of the unscientific British public.

Furthermore, a very prevalent impression amongst the people who do believe in the corrosion-resisting properties of these steels is that this is their only valuable property, and that they are of no further commercial value.

What Is Steel?

Before considering stainless steels, and so that we may more clearly understand them, let us first see what ordinary, commonplace steel really is. Steel is essentially an alloy of carbon and iron. Incidentally it constitutes one of the countless examples which show the wonderful properties of carbon, undoubtedly one of the most remarkable and valuable elements known to mankind. When it is remembered that the beautiful diamond is composed of pure carbon, exactly the same as the soot in our chimneys; and that carbon is the base of most drugs, high explosives, perfumes, beautiful dyes, and many other things, one realises what a wonderful element it is, and the properties it imparts to iron, when alloyed with it, are not its least marvellous and peculiar asset.

There are, of course, many different kinds of steel, and the nomenclature applied to them is based on their carbon content, thus :—

Dead mild steel contains	... ...	0.05 to 0.15%	carbon
Mild steel	,, ...	0.16 ,, 0.35%	,,
Medium steel	,, ...	0.36 ,, 0.45%	,,
Medium high steel	,, ...	0.46 ,, 0.65%	,,
High steel	,, ...	0.66 ,, 0.9%	,,
Extra high steel	,, ...	0.91 ,, 1.5%	,,

There are always other elements present in steel, such as manganese, and impurities such as silicon, phosphorus, and sulphur; and should a steel contain such metals as nickel, chromium, tungsten, vanadium, molybdenum, and cobalt, it is known as an "alloy steel," or in some cases as "tool steel."

We are now in a position to understand the composition of stainless steel and its relationship to other steels. Stainless steels are alloys of carbon, iron, and chromium, and if we add 12 to 14% chromium to each of the steels given in the list above, we have a complete list of all the stainless steels in use to-day. We have, therefore, arrived at the fact that stainless steels are actually quite different from ordinary steels, and that their wonderful properties depend upon the 12 to 14% chromium which they contain. It must here be pointed out very definitely, however, that *stainless steels are not stainless unless they receive a special* treatment. This statement, although possibly sounding somewhat paradoxical, is, nevertheless, perfectly true.

If we take a piece of a stainless steel ingot, or rolled bar, and polish it, then expose it to the atmosphere, it will rust almost as severely and easily as will ordinary "common or garden" steel. This fact accounts for a great deal of the scepticism with which a goodly number of motor cycle manufacturers regard these steels, and it cannot be too strongly stated that stainless steels must be correctly heat treated before they will exhibit their corrosion-resisting properties.

Stainless Properties Depend on Heat Treatment.

Fortunately the heat treatment process is very easily carried out. It consists of merely heating the steel to a "bright red heat" (*i.e.*, 900 to 950° C.), and then quenching it off in water or oil. This treatment renders the steel quite stainless but somewhat hard and brittle (*i.e.*, with a tensile strength in the neighbourhood of 100 tons per square inch), and so if a certain amount of ductility be required it must be reheated to a temperature below a dull red heat. By merely altering this reheating temperature, a host of different mechanical properties can be obtained, ranging from 110 tons per square inch tensile, with little or no elongation before the breaking point to 45 tons per square inch tensile, with perhaps 20 to 25% elongation.

We have heard a good deal recently about stainless iron. This name is rather misleading, because actually stainless iron is only a dead mild stainless steel (*i.e.*, it contains 12 to 14% chromium, the same as do other

Stainless Steels for Motor Cycles.—

stainless steels), but the carbon content is similar to that found in ordinary wrought iron, which is anything up to about 0.15%. So-called stainless iron, however, is a very useful alloy, and is much more easily worked (*i.e.*, forged, rolled, or stamped) than are the higher carbon stainless steels. It has other applications on account of the fact that after forging small sections and allowing them to cool in air they are comparatively soft and can be machined without annealing. This is unlike the other stainless steels, which can practically be considered as "air hardening" steels, by which is meant that they will harden to about 100 tons per square inch tensile by merely heating and cooling in air.

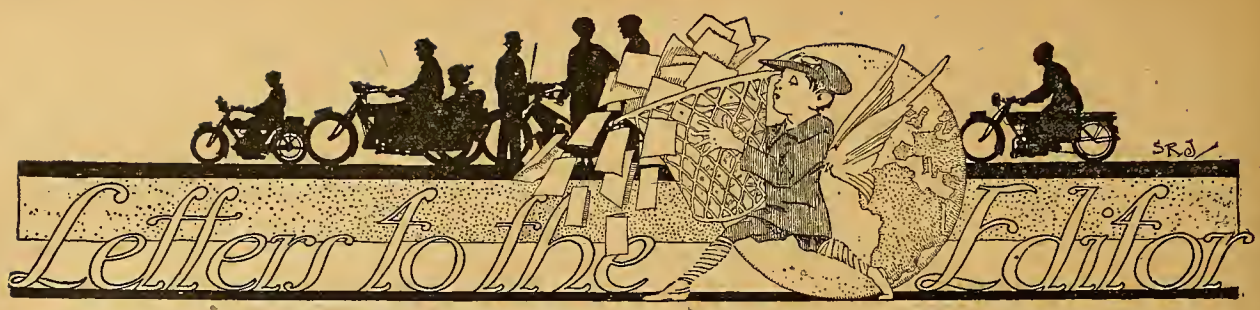
Practical Applications.

Just imagine, for example, if those "beastly" rims, spokes, handlebars, controls, etc., were manufactured of this alloy, we could plug along for hours in pouring rain—or even run along the sea shore in the shallow salt water—and when we had had enough we could put the 'bus on the stand *without* drying it down or touching it in any way, and leave it overnight with the absolute assurance of finding it perfectly free from that horrid red rust so frequently seen to-day. Or, again, we could give it a good hose down in a few minutes and then leave it. When one thinks of the time this would save—it is the drying which takes 90% of the time in cleaning a machine—one realises just a fraction of the advantages we would obtain if manufacturers could only be persuaded to adopt this steel and do away with the unserviceable silver- or nickel-plate which is so dear to their hearts.

Yet another point of advantage possessed by this steel to which attention must be drawn is its strength at high temperatures. Ordinary steels and most alloy steels, even if heat-treated to some 120 tons per sq. in., when heated to the temperature of the exhaust port of a motor cycle engine are very brittle, and their tensile strength drops to the extraordinarily low figure of about 7 tons per sq. in. Stainless steel at the same temperature gives a tensile strength of at least twice this figure, which fact speaks for itself and accounts to some extent for its popularity for the manufacture of exhaust valves.

Of course, there is a fly in the ointment—stainless steel is comparatively dear at present, but make the demand, and the cost will drop; besides, consider the saving in plating. KEMIST.

Those fortunate motor cyclists who are at present leisurely touring the Scottish Highlands are indeed to be envied. The illustration, which depicts a scene near Loch Tay, conveys a slight idea of the magnificent scenery. This road is well known to Scottish Trials competitors but during the strenuous "Six Days" the scenery cannot be appreciated as it can on an ordinary tour.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

TANK CORPS MOTOR CYCLISTS.

Sir,—I was extremely pleased to read your small paragraph in the issue of *The Motor Cycle* of August 17th in connection with the above, and I feel confident that if a big reunion of motor cyclists who were attached to the Tank Corps can be arranged, a very successful and pleasant meeting would result, and I should be only too pleased to give any assistance in this matter within my power.

I might state that I was one of the original members in this body, belonged to A Battalion H.B.M.G.C., and was stationed at Thetford, and from there went to France in September, 1916, and then on to the Somme, and I should very much like to have the opportunity of meeting some of the old friends of this battalion. W. PRATT.

Regimental No. 75102.

TWO-STROKE PHENOMENA.

Sir,—I am interested in the article on "Two-stroke Phenomena" in your current issue, but must offer my sympathy to your contributor for the extraordinary machine he possesses. I also run a 1921 "Levis," which, unlike his, does not four-stroke unless either the jet is too big or the engine over-lubricated. With an "economy" jet it functions perfectly at a small throttle opening on any down grade and at any speed above five miles per hour on the level (both with a gear ratio of 4⅜ to 1). It has never misbehaved itself so far as to six-to-sixteen-stroke, and I should get off and open my tool kit if it did.

The "profound contrast" between a four-stroke valve and a two-stroke port is to my mind a fallacy, but one which often appears in print and conversation. The duration of opening is about .8 in favour of the four-stroke, but in engines of similar capacity the effective area is in favour of the two-stroke, and the question resolves itself into an argument as to the respective merits of duration and effective area. As the duration is mechanically operated in each case, and also the only other factor to be considered when opening the throttle is atmospheric pressure, which is identical in each case, proportionate working must take place from the start right to the limit of the engine's speed. I do not see, therefore, why your contributor's theory can explain any variation from the normal functioning of a two-stroke. If his machine is over-running his engine on a down grade, he is obviously under-geared. I quite agree with his remarks about the release valve and its tale-telling properties, and I have also observed the rattling sound he mentions. My experience, however, has forced me to conclude that a change of plug is desirable and not more oil.

Obviously a two-stroke engine will run perfectly in either direction, the only limiting factor being the magneto.

To my mind the retarding influence to the development of the two-stroke is the absence of a carburetter designed specifically *for* the two-stroke engine.

If such an instrument were designed, it would be applicable to the four-stroke engine also. There is a certain mixture of petrol vapour and air which is correct to obtain the perfect detonating charge necessary to make the two-stroke do its intended work, and *the* carburetter would be one which gave a constant mixture at all throttle openings. At the moment, if I require more than 50 m.p.h., I must put in a jet which causes four-stroking up to about 12 m.p.h.

On the other hand, if I two-stroke at 5 m.p.h., I cannot reach much over 40 m.p.h. at full throttle.

It must be understood that the statements above are not intended to convey the idea that the inlet port of a two-stroke is the alpha and omega of its design; but your article makes no mention of exhaust and transfer, so I do not deal with them. I am now trying out the Hanwell Universal small-end, for which a patent has been sought, and hope to get better results with this fitting. As its name implies, it is a universal joint, and enables the piston to follow the cylinder without pulling the connecting rod out of the vertical. I can now remove my "Levis" cylinder without taking the tank out of the frame.

I am afraid I have encroached on your valuable space, but I am not alone in my opinion that the two-stroke is the future power unit, and I think that the articles and discussions on the subject are to be welcomed. In conclusion, I will assert that the reason one hears scornful remarks on the type is that there is not one repairer in a hundred who knows anything about it. F. W. FRASER.

THE A.C.U. AND SOUTHSEA SPEED TRIALS.

Sir,—Referring to the letter in your last issue from "Not a Member of the A.C.U.," may I entirely agree with everything he says? It is, as he says, "real childish." I have been a reader of *The Motor Cycle* since 1919, and since that date have always wondered why we never had races along the Southsea front, which, in my opinion, is an ideal speedway.

We were all overjoyed at the thought of having the chance of seeing some up-to-date sport; and it would just have given the Carnival an extra event which even non-motor cyclists would have enjoyed. PUSH-BIKE.

Southsea.

A group of motor cyclists attached to the Electrical and Mechanical Staffs at the Central Power Station Basrah Iraq Mesopotamia. All the machines are Triumphs.

PRAISE OF THE TWO-STROKE.

Sir,—Can you spare me space for a short account of my two-stroke experience? It may interest others and be of some use.

Until recently I have held the opinion common to many that the baby two-stroke, while being an admirable "potterer" for town work, was quite unsuitable for strenuous distance work. However, recent experience has changed my views. Last March I purchased a six-year-old New Hudson 2¼ h.p. two-speed two-stroke (baby)—my fourteenth machine. I immediately started using it for my journeys (I am a traveller), and to my surprise it answered all my requirements, taking both short town rides and long country journeys with equal ease and comfort. Since March I have covered 4,500 miles, with a petrol consumption of 135 miles to the gallon and total consumption of lubricating oil just under 5 gallons. Tyres and belt seem very little worse for wear than when I had it first, while total repairs came to 2s. 6d. for new magneto chain and 2s. for two spindles for the front springs, total 4s. 6d.; these last did not break, but were somewhat worn, so I replaced. I can do 30 to 35 miles an hour, but at that speed she is inclined to overrun; the best speed for a journey is about 25 miles per hour. For a man of my age (53), and a traveller, a better machine could not be wished for. "O.B."

Blundellsands.

DEVONSHIRE'S NEW COAST ROAD.

Sir,—May I be allowed to supplement the article entitled "A New Coast Road" so far as it touches the route from Exeter to Torquay?

If the tourist desires to pass along a road much favoured by char-à-bancs, running through several villages, and having little to recommend it in the way of sea or moorland views, then by all means let him take the coast road to which preference is given in the aforementioned article.

In my opinion the following is by far the best route:—At Alphington Cross, one mile from Exeter, take the right fork (for Torquay). First village Kennford; one mile beyond take left fork up Telegraph Hill. From top of hill, two miles, take left fork (Teignmouth). Straight into Teignmouth. Cross Shaldon Bridge, and again straight for Torquay.

This route is recommended as being the shortest and by far the most beautiful, as it affords the most glorious views both of the sea and Dorset coast on one side, and of Dartmoor on the other. Again, this route is not so 'bus-ridden as the other, and it avoids Newton Abbot; indeed the only places it touches are Kennford and Teignmouth.

Telegraph Hill is less than half a mile in length, and as regards gradient, is easily surmountable. It is worth one's while to stop at the top of the hill to get the sea view on the left. Again, one mile or so above Teignmouth, look down to the right for a view of the sea coast, the Teign estuary, the quaint old village of Shaldon, and the valley of the Teign.

D. BRIAN CHAMBERS.

GOGGLES AND HEARING.

Sir,—*Re* the above, I would like to say that I never managed to wear goggles during my service in the Royal Flying Corps, and did some 1,000 hours day and night flying.

I never felt safe with them on, and they seemed to dim the whole of my faculties, and the same applies when motor cycling, though I do wear them in dust.

I am sure, however, that this only applies to few, as very few pilots indeed worked without them in the squadrons to which I belonged, and I never met anyone else similarly affected.

With reference to the many letters and articles on the Peak District, I would like to recommend to your readers the beauties of Lathkil Dale. I have never seen anything more beautiful; but let the rider who goes there see that his brakes are highly efficient, and his engine pulling well, as the hill down the valley side is very stiff.

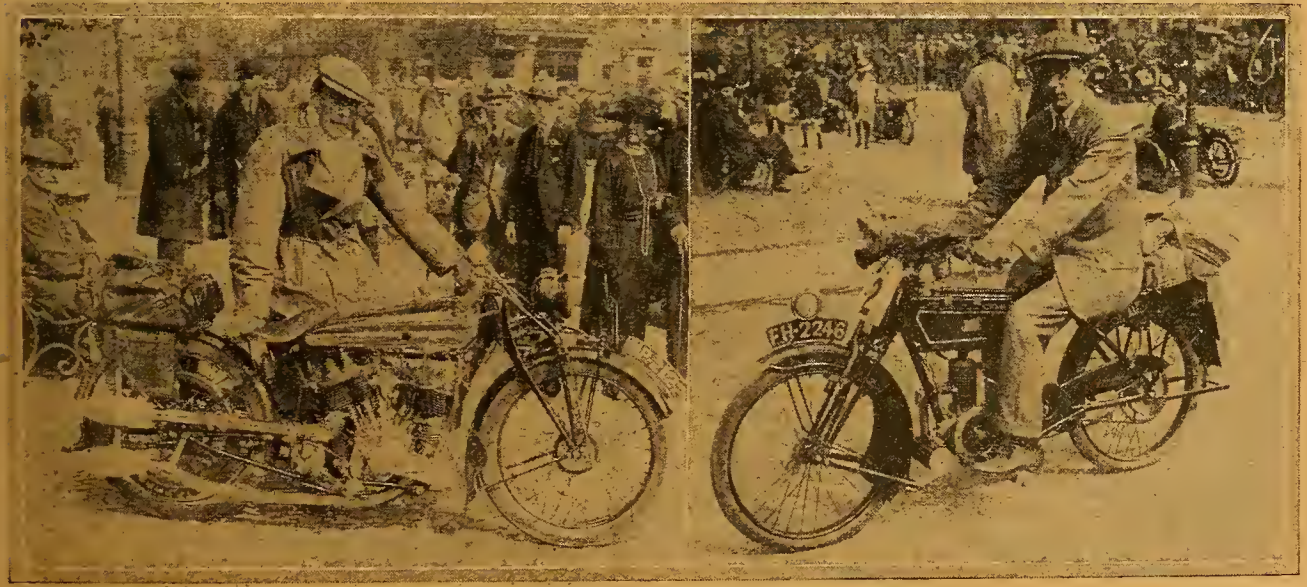
EX-CAPT., R.A.F.

Sir,—I am extremely interested in the discussion going on in your columns with regard to goggles and deafness, and, as you ask medical readers to contribute, may I as one offer a few remarks?

During the war I put in a few hundred hours of flying, and on looking back I can remember no occasion on which deafness occurred through the wearing of the goggles which I still use for motor cycling.

Like your other correspondents, I have noticed the deafness when motor cycling. If I may venture an opinion of the cause, I think it is largely due to the restricted lateral field of vision caused by ordinary goggles.

Sounds in motor cycling come usually from the rear or flank (if the sound of the engine be excluded). Both of these positions are usually out of the field of vision when the eyes are looking forwards out of goggles. In the air practically all the sound comes from the engine, *i.e.*, from the front usually—in the field of vision. The only other sounds



THE SIX DAYS TRIALS—A CONTRAST IN SIZES.

George Brough with the new 976 c.c. Brough Superior.

The smallest machine in the trial—the 169 c.c. J.E.S. R. P. Purnell is the rider.

are occasional shouts from one's observer, but he usually precedes these by a friendly smack on the back. As a pilot's head was continually turning, it is difficult to say whether "Archies" were more easily heard in front or not.

As a medical reader, may I suggest that, as the secondary hearing and sight centres of the brain are very closely connected by communicating nerve fibres, the temporary restriction of one sense, as caused by goggles, affects the other. This must not be confused with what happens to the one sense after the complete loss of the other.

The pressure of elastic round the ears and the wearing of a helmet has only a mechanical effect in closing the ear.

Inverness. N.U.T.

UNCERTIFIED ELECTRICAL TIMING.

Sir,—Your correspondent, "Interested" has been at some pains in raising the question of the accuracy of the Ferodo Electric Timing Gear, and incidentally that of the apparatus of somewhat similar character used at Brooklands.

We are quite aware that fractional errors must obtain even in the very highest class of time recorders, but we are quite satisfied with the makers' guarantee that the fully compensated clock supplied with our instrument has the minimum of error mechanically possible. If there is an error in lag or gain of 1 second in 4 hours, what perceptible or measurable lag or gain can there be in brief intervals of from 24 seconds to 2 minutes, during which the instrument is normally in use? In any case, the personal element is eliminated, and the times recorded are consistent in every case.

We do not see how it is possible to test the accuracy of any times recorded—certainly, we should not be prepared to accept the evidence of even the most experienced timekeeper with the best watch obtainable, since our instrument records divisions of time impossible with a watch. Again, the perceptive faculty of the human eye cannot appreciate differences of movement in excess of 1-16th of a second. It is, therefore, impossible that an observer can actually see the wheels of a vehicle crossing a line at a velocity of, say, 29 yards per second, which is the approximate distance travelled in one second at 60 miles per hour.

We are not experts in connection with split second chronometers, but it occurs to us that we have seen no times recorded with watches by divisions of seconds other than 1-5ths; in this there may be considerable error, for it is quite possible that two motor cycles or cars at the finish of a half-mile timed event may be running at 80 m.p.h. and each given times of 25 seconds, yet one may have accomplished 24.85, the other 25.15 seconds—the former would be about 13 yards faster. It would seem to follow that for recording high velocities, that electrical contacts are essential in conjunction with an instrument making a visible and permanent record of seconds or half-second intervals, which can be very finely subdivided—quite easily down to 1-16th of a second.

We agree that the actuating clockwork should be calibrated from time to time by recognised authorities.

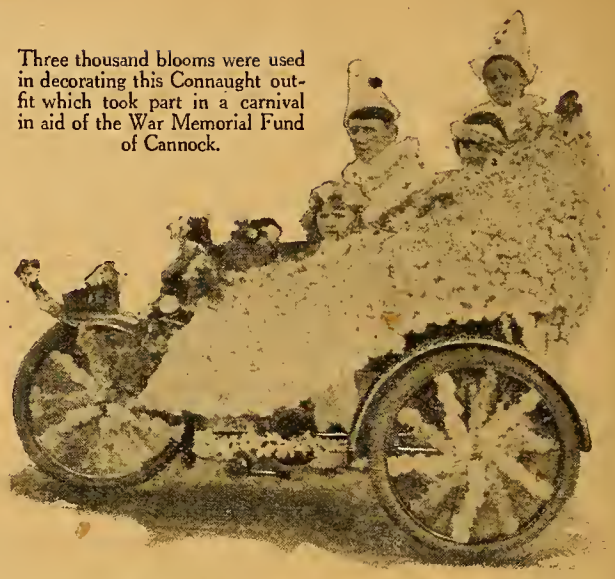
Yours faithfully, FERODO, LIMITED.

BRISTOL'S FREAK HILLS.

Sir,—In my letter *re* the above, which appeared in your issue of 3rd inst., I stated that East Dundry, Ubley, and Burledge hills were not considered "freaks"—in any way—by the Trials Committee of the Western Centre Auto Cycle Union. These climbs were included in the course of the "Arctic" Trial held on April 1st, 1922, and as prior to the event we had stated in the Press that no freak hills would be on the route, I was anxious to correct the impression which would be gained from your report of the Bristol-Bath Inter-Club Trial, namely, that possibly we had not acted in good faith. I further stated that the Bristol and Bath Clubs did not take part in the Arctic (*as clubs* being understood), though I might here add that the few members who did ride, did well.

From the letters which appeared in your issue of 17th on the subject, it seems that the writers have obviously ignored the object of my letter, making myself the subject of a personal attack in a way which I should term "not cricket," on which point I leave your readers to judge.

The only two occasions on which I have negotiated these three hills in competition were the Bristol-Bath Inter-Club



Three thousand blooms were used in decorating this Connaught outfit which took part in a carnival in aid of the War Memorial Fund of Cannock.

Trial of 1921, and in a recent club half-day event run by the Weston Club. In the former I rode a big 7 h.p. A.J.S. solo, and, unknown to myself, I was told that momentarily I touched the ground with one foot on East Dundry on the first circuit only. Burledge was taken for the most part on top gear, and Ubley on middle. In the more recent trial I rode my 3½ h.p. Sports Douglas—which then had some 25,000 miles to its credit—and, due to the heavy overnight rainfall, afternoon sun, and a much-worn back tread, I found it quite impossible to obtain any grip, without the use of chains, on Burledge Hill. I did not stop my back wheel at all, and after much hard work, aided by an engine which seemed quite fresh after nearly 15 minutes' revving on the climb, I reached the top. Not one competitor climbed clean without non-skid chains, and of those who, like myself, believed in using ordinary methods of obtaining grip, only a very few succeeded in keeping their back wheels going all the while.

Mr. Simpson will perhaps be interested to know that I am still suffering from injuries received in 1914 in Belgium, and he is quite correct when he says I was exhausted on reaching the top.

In conclusion, may I remind your readers that the hills which form the subject of this letter were not "*cut out*" of the Arctic Trial, but because the district in which they lie was completely snow-bound on April 1st this year, the afternoon's course of which they formed a part, was not traversed.

J. A. NEWMAN,
Honorary Trials Secretary and Treasurer,
A.C.U. Western Centre.

Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."
The standard handbook of the motor cycle.

MAKE BROOKLANDS WORTH VISITING.

Handicap Events Responsible for the Failure of the Weybridge Race Meetings as a Spectacle.

By "TANGENT."

Spectators, nowadays, are either keen young enthusiasts, interested trade men, or people who enjoy an occasional "flutter." Taken together they are not very numerous—and the average, ordinary motor cyclist is almost entirely absent.

ABOUT this time each year the regular follower of Brooklands events begins to lose a good deal of his earlier enthusiasm, and the old question as to what is wrong with the track crops up once more.

As a matter of fact, quite a number of things are "wrong"—varying according to the viewpoint which one takes—and none of them can be righted very easily. While I do not intend to limit my remarks to the motor cycle meetings only, I will endeavour to put the case of the average motor cyclist spectator and the *occasional* or *would-be* motor cyclist competitor.

The track is much too big. Even the racing cars are inclined to get lost on its vast expanse of bare cement; motor cycles at 70, 80, or 90 m.p.h. do not look in the least impressive to the spectator, who sees them only speeding down a section of the straight usually as far on the other edge of the track as they can be, or else, intermittently, as black spots crawling along the railway straight or the Byfleet banking. For half of each lap they are almost lost to view altogether. A mile to the lap track, half as wide as Brooklands, would still permit plenty of room—for motor cycle racing, anyhow.

Compromise.

It may be argued that it is all very well to say that the track is too large, but that it cannot very easily be made smaller. That is so, and until a sensibly-designed substitute makes an appearance in the Midlands we must make the best of things as they are.

There are several further failings of the Weybridge location, but before touching upon them one additional advantage of the Midlands scheme must be emphasised. New blood would be infused into the entry lists, and, since Birmingham is about a hundred miles nearer the centre of the motor cycle industry than London, it would be healthy new blood and plenty of it. If Brooklands, with all its faults, were transferred bodily to somewhere near Birmingham, the racing would gain 100% in interest, more spectators, too, would attend, and admission charges might profitably be reduced.

In handicap races it occasionally happens that the limit man completes a lap before the scratch men start. Spectators find such races very difficult to follow and consequently much interest is lost

Too Few Star Riders.

The track as it is to-day suffers because there are too few star riders. In each capacity class there are two or, at the most, three top-notch performers who are always a little faster than the majority; these riders attend every meeting, and if all the events were on a scratch basis nobody else but them would win—for a time.

I do not begrudge these people their superiority; nobody does, for they have attained it by their hard work and long hours of experiment and practice. At the same time, they are largely responsible for the vogue of the handicap, and the handicap event is the curse of Brooklands.

A handicap is not a race at all; it is a calculation. The competitors are not racing one against the other, but all against the handicapper. Unfortunately, one may go even further and say that they are not racing, but scheming against the handicapper.

The system, of course, is at fault. To be so unwise as to win two races at one meeting

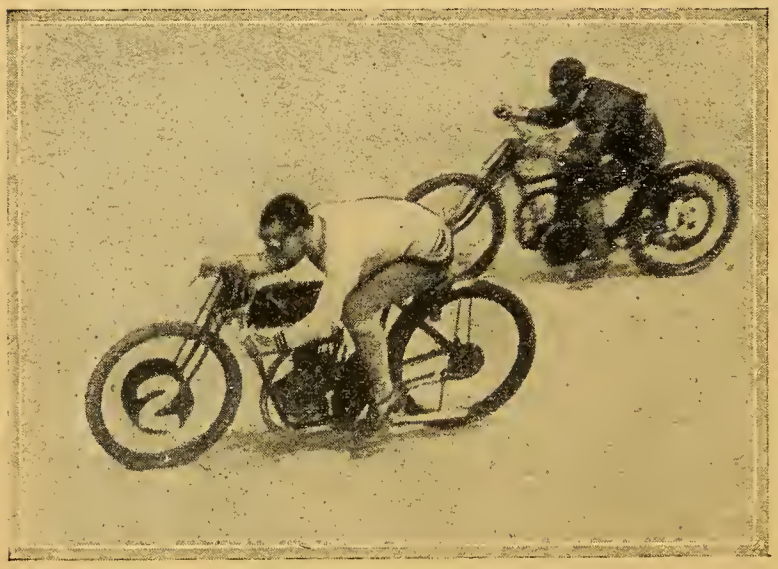
Make Brooklands Worth Visiting.—

means that the victor will not win again in a hurry; he will be penalised right out of the picture for months to come. The experts at the game contrive to win races only as frequently as they dare, and to lose them in a realistic manner as and when required.

Indeed, to such a pitch have matters come that one hears the view expressed more often than should be that the riders arrange amongst themselves as to who will win each race. It is very deplorable that this quite incorrect assumption should find currency, but it is understandable when the true facts of the case as already outlined are considered.

The Incentive to Win.

It is not easy at a glance to see how matters can be put right in this respect, but I firmly believe that if the handicap race were eliminated altogether from Brooklands programmes things would right themselves in course of time. The regular limit man of to-day would simply be forced to find more speed, and there is no reason why they should not be successful. It is not necessary to handicap the T.T. competitors to ensure close finishes. The mere fact that one or two men to-day have a monopoly of Brooklands speed is only because the others have not had the "get-on-or-go-under" incentive to beat them.



Duels such as this are not uncommon on the wide expanses of Brooklands track, but too often only a venturesome press photographer is near enough to appreciate them.

Scratch races already form a feature of B.M.C.R.C. meets, but so long as handicap events are also to be won, the tendency is to stifle effort. It is to be regretted that the most recent meeting was run purely on a handicap basis.

Keep the races confined to engines of the same capacity; if need be, separate the "experts" from the "generals," as is done already in club hill-climbs; and certainly run events for novices and events for equipped touring machines; but at all costs avoid the line of least resistance—the handicap.

Neck-and-Neck Races.

It might be a slow process. Probably for months the same two or three riders on the same two or three machines would win the "expert" classes, but the other manufacturers, I feel sure, would eventually be shamed into action, and the invariable headache which a visit to a race meeting brings to many others beside myself would be forgotten in the interest of following a series of neck-and-neck races.

Again, to attract new men, why not stage scratch races for private owners, confined to machines of one particular make and capacity? A short race for genuinely privately owned 490 c.c. Nortons; another for 494 c.c. Douglases; another for Scott Squirrels; for Levises; for Triumphs—all would provide much interest.

Then, as a special feature for the last meeting of the year, a race for straight-from-the-crate stock models of the makes upon which the expert riders have been scoring such phenomenal successes. Let the "stars" ride them, but do not let them tune them. Would the same handful of men win if the race went to, say, twenty laps? It is difficult to tell, and for that reason the spectacle would be exciting.

Or, again, a combined one-lap race and brake test, run in heats with two or three riders at a time, the winner to be the first man to get round the track and bring his machine up stationary on the starting line again. Or timed speed trials up and down the test hill non-stop to a predetermined spot at the foot.

There are lots of ways of attracting new men to the track, and most are methods which would also increase the interest for the spectators

More often, however, it is a case of solo lightweights and high speed three-wheelers straggled all over the track, and all travelling at different speeds.

Current Chat

Times to Light Lamps.

August	31st	.. ..	8.19 p.m.
Sept.	2nd	.. ..	8.14 „
„	4th	.. ..	8.10 „
„	6th	.. ..	8.5 „

One number plate must be illuminated as above (*vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Repairs in Progress.

Motor cyclists wishing to test the springing of their machines are recommended to carry out tests on a stretch of main road between Watford and Rickmansworth, where alleged road repairs are in progress.

The Motor Exhibition.

Intimation has been received by the Society of Motor Manufacturers and Traders that the King has been graciously pleased to grant his patronage to this year's motor exhibition, which will be opened to the public on Friday, November 3rd.

"Crash-Helmet" de Luxe.

One cannot but admire the ingenuity of a certain "speedman" familiar to the Brooklands community whose practice it is to disturb the ozone with some force protected as to the head in what was once a self-respecting bowler hat—now raised to the elevated ranks of a "crash-helmet" by means of skilful camouflage.

A New Fuel.

A reader tells us that he stopped outside a large garage not long ago for a fill-up of petrol. An assistant, obviously new to the game, was in the act of attending to his requirements when our correspondent's curiosity was aroused by the appearance of the liquid. On enquiries being made, it was discovered that the zealous attendant had obligingly filled the tank with water from a "show" can placed outside the shop to attract customers.

Not a Race.

The third one-day "sporting" trial, open to members of the Motor Cycling Club, is being held this year on Saturday, September 30th, when solo motor cycles of any capacity will be eligible to enter. The start will be made from the Railway Hotel at Caterham at 10 o'clock, the route, consisting of a circuit of about sixty miles, to be covered twice. Entries for this event, which should be addressed to Mr. F. T. Bidlake, 84, North End Road, Golders Green, London, N.W.11, close on Saturday, September 23rd.

Wanted, an Owner.

A member of *The Motor Cycle* staff recently picked up in the road a licence holder and card. XB 3318 is the number.

Awards for the Passengers.

After last week's Trials, the sidecar passengers are again asking themselves why they should not receive some award.

Lost, Stolen or Strayed.

Motorists appear to be getting a trifle careless in their habits judging by what they leave about the roads in the course of a day.

A Little Giant.

How can riders of 1,000 c.c. solo machines preen themselves after climbing Bwlch-y-Groes when a little J.E.S. took it in its stride during last week's Trial?

An Excellent Performance.

Though quite unacquainted with the course, Clifford Wilson (653 Quadrant) made an excellent performance in the International Six Days Trials. He not only made a clean ascent of the Weissenstein pass and gained a gold medal, but he also received the special cup for the best performance in Class D.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday **4d.**

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Sidecars in France.

There was an enormous increase in the number of sidecars on the roads in France between 1920 and 1921. In the former year there were only 5,559, while last year there were 13,358, an increase of 140 per cent. This, too, is reckoned as rather a moderate estimate.

Looking for Trouble.

It is surprising to observe how few people appear to be aware of the dangers attendant upon precipitating themselves and their machines into any main thoroughfare from a side turning without any "audible warning of approach." Why is it that drivers of Ford cars always seem to be the worst offenders?

A Breakfast-table Problem.

What is the longest period a motor cycle has run, maintaining efficiency, without decarbonising? Messrs. A. G. Cox and Son, of the Irving Motor Works, of Taunton, put in a claim for a single cylinder Ariel which has been run for five years with a sidecar without having either a valve ground in or the cylinder taken off. Even then there was only 1-32nd of an inch of carbon deposit. Can anyone beat this record?

"The Old Order Changeth——!"

It is interesting to recollect that a comparatively short while ago, even after the war, it was considered pure "swank" to wear the now almost universally popular "flying helmet" for motor cycling purposes—until people began to realise that such a form of headgear was both comfortable and efficient. Nowadays they are worn by motor cyclists of every description, from the "big twin" solo man to the baby two-stroke "speed merchant."

Passing Trams.

Little attention appears to have been paid to the very real danger to overtaking traffic at tram junctions, the heavy cars swinging to right or left without any signal to other drivers who may be expecting them to go straight on. Last week a writer in *Motor Transport* states that he saw one such accident which is typical of what too often happens. A light car on the off side of a tram at a junction was just passing as a tram took the points, and was crushed against another tram. The driver of the No. 1 tram could not see the car when he took the points, while the driver of the car, seeing no signal, naturally took it that the tram would go ahead instead of to the right. The conductor could not warn the car driver, as he was too far behind. In a case like this, who is to blame for the accident?

CLUB NEWS

HARROGATE M.C. RELIABILITY TRIAL.

(Left) A. Leake (349 Massey-Arran) at the top of Jack Hill. (Right) T. Holmes (481 Scott Squirrel) followed by Eastwood (498 Zenith-Bradshaw) on a pretty but rough "titbit" of the route well known to competitors in the "Scott" and Ilkley Trials.

Southport M.C.

In the reliability trial held recently for the "Rudge" cup and special prizes, J. Carnell (998 Rudge sc.) was the winner, being the only rider to make a non-stop climb of Park Rash. Redmond (349 Massey-Arran) and Speakman (499 Rudge) won the special prizes in the 350 c.c. class and over 350 c.c. class, respectively, Carnell taking the special prize in the sidecar class.

Oxford M.C.

By invitation of Mr. and Mrs. Frank Gray, a gymkhana has been arranged to take place at Shipton Manor, Shipton-on-Cherwell, on Thursday, September 7th, commencing at 2.30 p.m., when a number of interesting and amusing events will be included in the afternoon's programme. Entries close on September 2nd and should be sent to Mr. F. L. K. Loxley, at 66, St. Giles' St., Oxford.

Widnes M.C.

Thirteen competitors started and twelve completed the 84-mile course selected for the reliability trial held recently to decide the winner of the "Ireland Rose Bowl," when the following results were recorded:—

(1) W. Cook (550 Triumph), rose bowl and gold medal.
(2) A. J. Sandland (998 Morgan).
(3) H. Burrell (348 Rex-Acme).
(4) J. Mooney (499 Sunbeam).

Peterborough M.C.C.

Results of the hill climb held on the 20th inst. are now to hand, and are given as follows:—

250 c.c., 2-stroke.—Standing start: (1), B. Knighton (225 Royal Enfield), 26⅕s. (30.66 m.p.h.); (2), A. Mason (247 Levis), 33⅖s. (26.71 m.p.h.). Flying start: (1), D. Coldesworth (249 Massey), 19⅖s. (46.31 m.p.h.); (2), B. Knighton (225 Royal Enfield), 20⅗s. (42.65 m.p.h.).

350 c.c.—Standing start: (1), J. W. Turnill (349 Royal Ruby), 22⅗s. (39.82 m.p.h.); (2), H. Le Boeuf (349 A.J.S.), 25⅕s. (32.53 m.p.h.). Flying start: (1), J. W. Turnill (349 Royal Ruby), 15⅖s. (58.44 m.p.h.); (2), H. Le Boeuf (349 A.J.S.), 16⅘s. (53.56 m.p.h.).

500 c.c.—Standing start: (1), A. Stapleton (499 Sunbeam), 19⅗s. (45.96 m.p.h.); (2), O. Collier (499 Sunbeam), 19⅘s. (45.46 m.p.h.). Flying start: (1), A. Stapleton (499 Sunbeam), 13s. (69.21 m.p.h.); (2), O. Collier (499 Sunbeam), 13⅕ s. (68.18 m.p.h.).

Unlimited.—Standing start: (1), O. Collier (499 Sunbeam), 19⅖s. (46.31 m.p.h.); (2), A. Stapleton (499 Sunbeam), 19⅘s. (45.46 m.p.h.). Flying start: (1), A. Stapleton (499 Sunbeam), 13s. (69.21 m.p.h.); (2), O. Collier (499 Sunbeam), 13⅕s. (68.18 m.p.h.).

Spectators Race.—Flying start: (1), T. Parker (499 Sunbeam), 15½s. (59.21 m.p.h.).

The fastest time of the day was made by A. Stapleton (499 Sunbeam), whose time was 13s., giving a speed of 69.21 m.p.h.

Reigate, Redhill and District M.C.C.

September 10th has been chosen for the one-day reliability trial, open to all clubs in the South-Eastern Centre (A.C.U.). The start will be made from Laker's Hotel, Redhill, at 10.30 a.m. Entries, which close on Saturday, September 2nd (first post), should be addressed to Mr. E. F. Bewers, 22, Garlands Road, Redhill, from whom any further particulars are available.

Lune Valley M.C.C.

Speed trials held on Hest Bank sands on the 20th inst. resulted in some exciting finishes, awards being made as follows. The course measured ½ mile:—

350 *c.c.* (*scratch*).—(1) P. Barron (348 Hawker); (2) J. N. Yates (349 Sheffield-Henderson).

600 *c.c.* (*scratch*).—(1) J. N Yates (349 Sheffield-Henderson); (2) P. Barron (348 Hawker).

Unlimited (*scratch*).—(1) J. H. Illingworth (989 Trump-Anzani); (2) J. N. Yates (349 Sheffield-Henderson).

350 *c.c.* (*handicap*).—(1) G. Hardman (349 Coulson B.), 150 yards; (2) J. N. Yates (349 Sheffield-Henderson), scratch.

600 *c.c.* (*handicap*).—(1) R. Foxcroft (499 Sunbeam), 50 yards; (2) H. Baxter (490 Norton), scratch.

Unlimited (*handicap*).—(1) H. Baxter (490 Norton), 25 yards; (2) R. Foxcroft (499 Sunbeam), 50 yards.

600 *c.c. Sidecars* (*scratch*).—(1) H. Jackson (499 Sunbeam sc.); (2) H. Baxter (490 Norton sc.).

Unlimited, Sidecars (*scratch*).—(1) E. B. Parkinson (976 Brough Superior sc.); (2) H. Jackson (499 Sunbeam sc.).

600 *c.c. Sidecars* (*handicap*).—(1) H. Jackson (499 Sunbeam sc.), scratch; (2) H Jepson (498 Zenith-Bradshaw sc.), 100 yards.

Unlimited. Sidecars (*handicap*).—(1) E. B. Parkinson (976 Brough Superior sc.), scratch; (2) H. Jackson (499 Sunbeam sc.), 25 yards.

Races were run over a 5-mile course in the following classes:—

Unlimited. Sidecars (*handicap*).—(1) E. B. Parkinson (976 Brough Superior sc.), scratch; (2) H. Jepson (498 Zenith-Bradshaw sc.), 2min.

Unlimited. Sidecars (*scratch*).—(1) E. B. Parkinson (976 Brough Superior sc.); (2) H. Jepson (498 Zenith-Bradshaw sc.).

350 *c.c.* (*scratch*).—(1) J. N. Yates (349 Sheffield-Henderson); (2) G. Hardman (349 Coulson-B.).

600 *c.c.* (*scratch*).—(1) H. Baxter (490 Norton); (2) R. Foxcroft (499 Sunbeam).

Unlimited (*scratch*).—(1) J. Illingworth (989 Trump-Anzani); (2) J. N. Yates (349 Sheffield-Henderson).

Unlimited (*handicap*).—(1) G. Hardman (349 Coulson-B.), 1½min.; (2) J. Illingworth (989 Trump-Anzani), scratch.

20 *Miles Unlimited Handicap Race*.—(1) J. Illingworth (989 Trump-Anzani), scratch; (2) J. Caurot (481 Scott-Squirrel), 7½min.

The winner's time in this race was 22min.

Bradford M.C. and L.C.C.

Solo machines only will be allowed to compete in the first hill climb, which has been planned for Saturday next, September 2nd, to decide the winner for the Wilson Cup. On the day following, the 3rd inst., a reliability trial for the Priestly Cup will be run off. A general meeting is being held at 8 p.m. to-night at the Club headquarters.

Matlock and West Derbyshire M. and M.C.C.

The half-day reliability trial originally arranged to take place on August 27th has been postponed until September 10th, when a start will be made from Darley Bridge Garage at 2.30 p.m. to cover a course approximately 80 miles in length. A gymkhana is being held on Saturday, September 9th. Particulars of both these events may be obtained from Mr. E. F. Hurt, of South Darley, Matlock.

Avalon and Wells M.C.

A successful hill-climb was held on High Ham Hill recently. L. G. Williams (494 Douglas) made fastest time of the day, his time for the half-mile standing start being only 28 seconds.

The results were:—

500 *c.c.*—(1) L. G. Williams (494 Douglas); (2) V. G. Tucker (490 Norton).

750 *c.c.*—(1) L. G. Williams (494 Douglas); (2) V. G. Tucker (490 Norton).

1,000 *c.c.*—(1) L. G. Williams (494 Douglas); (2) V. G. Tucker (490 Norton).

500 *c.c. Sidecar.*—(1) L. G. Williams (494 Douglas sc.); (2) J. Steele (490 Norton sc.).

1,000 *c.c. Sidecars.*—(1) L. G. Williams (494 Douglas sc.); (2) P. Steele (490 Norton sc.).

Coatbridge, Airdrie and District M.C.C.

The confined flying half-mile speed event held recently over a measured section of the Glasgow-Edinburgh road near Harthill was productive of some excellent times. The official results to hand are given as follows:—

400 c.c.: H. Drummond (349 Massey-Arran), 29⅗s.

600 c.c.: N. Muir (490 Norton), 26½s.

1,000 c.c.: N. Muir (490 Norton), 26s.

600 c.c. (sidecars): J. Muir (490 Norton sc.), 32⅖s.

1,000 c.c. (sidecars): R. W. Muir (976 Brough Superior sc.), 32s.

The "Sunbeam" gold medal awarded for the fastest time of the day for a solo machine of any capacity was won by N. Muir (490 Norton) in 26s. H. Drummond (349 Massey-Arran), whose time was 29⅗s., carried off the prize of £2 2s. offered by Mr. E. M. McNaught for the fastest time of the day up to 400 c.c., whilst the fastest time for sidecars of any capacity was achieved by R. W. Muir (976 Brough Superior sc.) in 32s., thus winning the "Walter Connor" Cup.

The Six Days Trials Described

Another view of Mow Cop showing a pair of 678 c.c. Martinsyde sidecars making the ascent. The riders are J. T. Bashall and A. A. Symes.

A scene at Mow Cop on the second day. Crowds gathered to watch competitors, and in many instances riders were baulked by thoughtless spectators pressing on to the course. J. Harrison-Watson (550 Triumph sidecar) followed by C. Dickinson (498 Ariel sidecar).

Five Days on the Road. A Test of 830 Miles in Yorkshire, the Welsh Mountains and the Thames Valley for 143 Representative Motor Cycles. 106 Arrived at Brooklands for the Final Speed Trial.

MONDAY'S RUN, 179¾ MILES.

York, Stillington, Ampleforth, Thirlby, Helmsley, Gillamoor, Kirkby Moorside, Hovingham, Strensall, York (lunch), Naburn, Cawood, Brierley, Barnsley, Ringinglow, Ashford, Buxton.

AS fully reported in last week's issue, the route on Monday morning was of a trying nature despite the fact that fine weather conditions prevailed.

White Horse, the first hill, although easy, proved the undoing of many, while the big ascent of the run, Rosedale Abbey Bank, became a *débâcle*, the majority failing through lack of wheel grip on the loose surface.

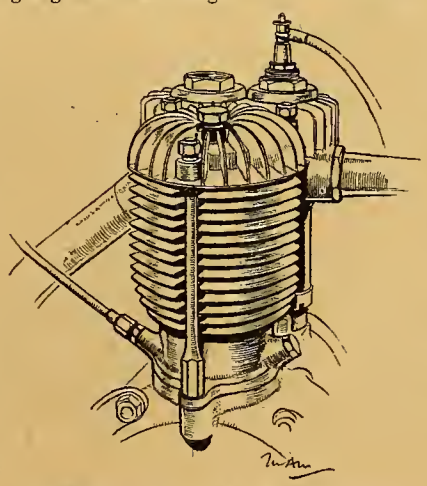
One or two soloists, the three-wheelers, and, in particular, certain single-cylinder sidecars made outstanding performances.

Distinguished at the Outset.

Amongst the solo machines, the A.J.S., the new 350 c.c. James, the Scotts, and the Powell earned special praise, while the outstanding riding ability of G. Dance (499 Sunbeam) gained tremendous applause on the hills. Sidecars were upheld in reputation chiefly by the P. and M. team, the New Hudsons, the Dunelt, and the A.J.S. The wonderful handling of the latter machine by F. W. Giles was as remarkable in its way as the brilliant solo riding of Dance and the Scott exponents.

All the Morgans, the T.B., and the L.S.D. successfully climbed Rosedale, but the Scott Sociable required slight assistance even without its passenger.

From York southwards to Buxton in the afternoon was an easy trip over main and good secondary roads, with a little rough going near Hathersage.



Long bolts hold down the cylinder on the new single cylinder James.

TUESDAY'S RUN, 140¾ MILES.

Buxton, Mossley Moss, Mowcop, Biddulph Moor, Axe Edge End, Rudyard (lunch), Ipstone, Cheadle, Hilderstone, Aston, Gt. Bridgeford, Newport, Wellington, Longwood, Uriconium, Shrewsbury.

DESPITE early rain, which belied the promise of the previous evening, Tuesday's run was not so severe as Monday's.

Nevertheless, there were nine retirements, at least three being definitely attributable to broken frames or sidecar chassis, which gives some indication of the nature of the going. Much of it was very rough, and almost all of it was tortuous in the extreme.

Freak Surfaces But Easy Hills.

One section, which included a slight hill, was thoroughly freakish; but the two main test hills did not take a heavy toll. Two of the retirements were caused by accidents, both with somewhat serious consequences to the drivers, I. P. Brettell (348 Connaught sc.) and W. N. Clayton-Russell (633 Norton sc.). Brettell's retirement robbed the trials of one of the two 350 c.c. sidecar outfits, and previously he had been doing well.

A straying Scotch mist hung over Buxton at eight o'clock; and the first hour or

At the lunch stop on the first day. The keen interest of the Yorkshire people in the trials is evinced by the crowd inspecting competitors' machines.

so was an unpleasant scramble over moorland roads, with a visibility of about 50 yards. Buxton to Rudyard, the lunch stop, is only a matter of 17 miles by the main road, but this was ingeniously lengthened to 66 on the route-card.

Mow Cop—Long and Straight.

Mow Cop was the scene of more lost marks than anywhere else. It is long and straight and uneven on the steepest (1 in 4½) portion; on Tuesday an inconsiderate crowd, which persisted in blocking up the road, multiplied its slight difficulties.

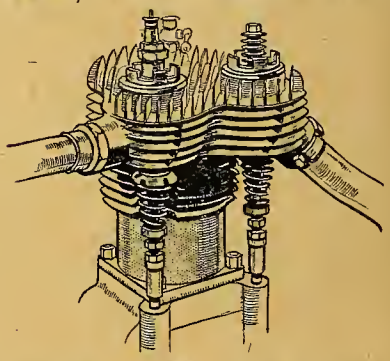
Except the J.E.S., which stopped, owing, it is said, to a momentary piston seizure, all the lightweights were good. The bigger (500 c.c. and upwards) solo machines simply toyed with the gradient; Dance and Bennett (499 Sunbeams), two of the three Scotts, J. H. Davis (492 Sunbeam), G. F. Bainbridge (739 Martinsyde), T. Buckle (748 F.N.), and George Brough (Brough-Superior) all appearing to exceed the legal limit on the 1 in 4½ portion.

The New Hudson and P. and M. single-cylinder outfits were the most uniformly excellent in their class, but it was noticeable that the four-speed gear on Lewis's P. and M. enabled him to overtake Freeley's three-speed New Hudson—and the latter was by no means slow.

J. W. Wildblood's 494 c.c. Douglas outfit also distinguished itself by beating W. H. Bashall's 678 c.c. Martinsyde—but after all the event is not a race, and slow but sure is a wise motto. The Connaught sidecar just scraped up without assistance, while its only rival, the Weatherell, getting a clear passage, rushed up at speed.

Penalty of Overloading.

J. Harrison-Watson's super-equipped Triumph outfit konked right out; Hadley's and Danskin's 499 c.c. Rudge sidecars both required assistance, and it was touch and go with Sibley. Two "seven-fifty" twins also needed help—F. Cotton's James and W. E. Grange's Bradbury; and the Scott Sociable shed its passenger and some of the water in its radiator—probably a leak. Bourlet (498 Ariel sc.) claimed a baulk for his failure.



New cylinder on 498 c.c. Ariels. Deeper radiating fins and larger and more free valve ports are its features.

It was difficult to distinguish the "very fast" sidecars from the merely "fast," but the following should certainly come under the first heading: F. W. Giles (799

Rough portions on the route of the second day. E. W. Choldcroft (349 A.J.S.) and H. F. Harris on a similar mount.

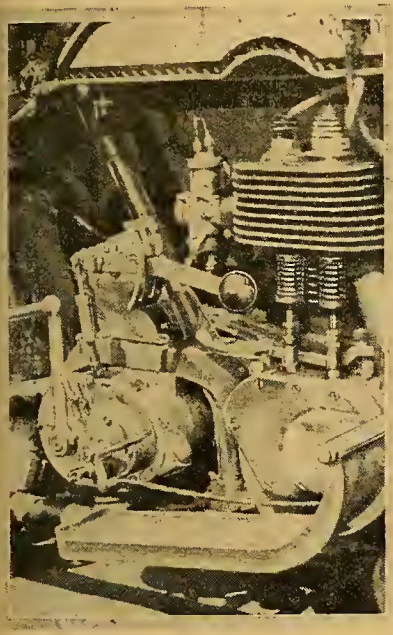
Competitors on cart tracks near Ipstone. E. A. Barnett (346 Francis-Barnett) followed by S. M. Greening, also on a Francis-Barnett.

Six Days Trials Described.—

A.J.S. sc.), L. C. McCardie (989 Harley-Davidson sc.), W. N. Clayton-Russell (633 Norton sc.), and W. A. Fell-Smith (976 Brough-Superior sc.). As usual, H. F. S. Morgan (Morgan) made a show at least as good as any sidecar.

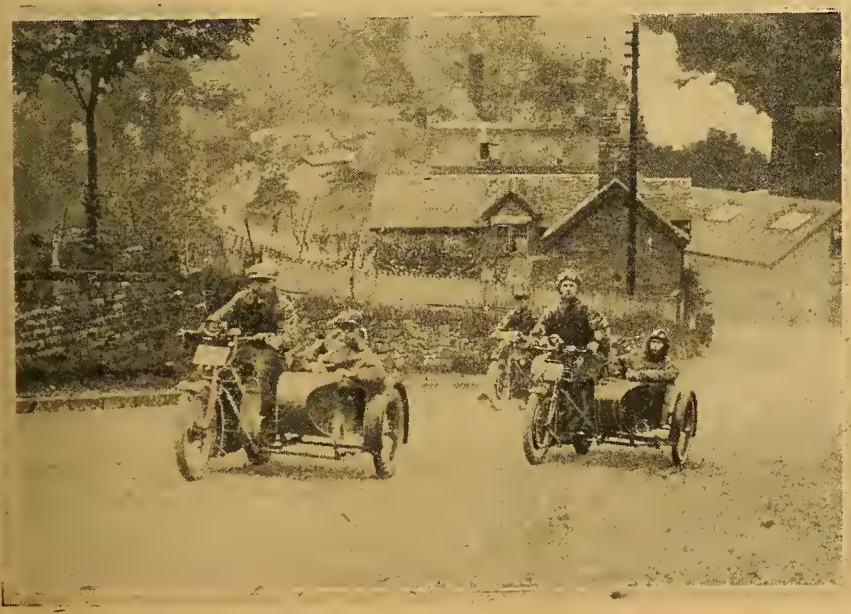
Lunching at Rudyard, somebody noticed that E. J. Kehoe's Rudge did not look right. Examination proved that the front down tube was broken, displacing the engine by at least two inches. The news was broken to the rider, who confessed that he had not noticed it himself. News also came through that Lea's 496 c.c. Lea-Francis had disintegrated somewhere on the moors from the same cause.

There were more corners than ever in the afternoon's run, but with the exception of the Colonial section already referred to, the road surfaces were slightly better.



For quick manipulation. An experimental gate change mounted in a bracket incorporated in the Dureff gear box frame clamp on Clayton-Russell's Norton.

A shallow watersplash in picturesque surroundings near Leek. W. Bucknell (993 Matchless sidecar) and E. C. Barton on a sister machine.



A trio of sidecars on the hill leading out of Oakamoor. F. B. Freeley (535 New Hudson), P. Pehrson (499 Dunelt), and A. W. Hadley (499 Rudge).

The descent to Oakamoor was more difficult than the succeeding ascent, and it is surprising that apparently none of the many spectators there knew of a considerably less easy hill two miles further on. However, even the latter was not severe enough to be interesting, nor was anything else until the Wrekin was reached.

Solos Only on the Wrekin.

Mainly because of a narrow gateway, solo machines only were allowed to attempt the climb; and since it terminated some distance from the actual summit it was child's play to most.

The only bump on the well-graded, smooth track up through the woods caused just one failure—J. L. Hanman (494 Douglas)—but D. H. Davidson (596 Indian Scout) nearly met a similar fate, and Westwood Wills (547 Powell) was dangerously long in effecting a gear-change on the hairpin. One or two riders footed, quite unnecessarily, at this point.

The palm for the most imposing performance goes to W. Hill (Scott), although several ran him close and none displayed any lack of power.

As it was on Tuesday, the Wrekin is a much over-rated test; it is doubtful, even, if it becomes treacherous when thoroughly wet.

* * *

Only nineteen competitors finished the first day's run with absolutely clean sheets.

* * *

Billeting-out by hotels in Shrewsbury was not appreciated by those concerned. In one case a well-known rider was told by his temporary landlady that he must come home to bed at nine o'clock; and in another the good lady of the house had not returned from the "pictures" by 10.30 p.m.!

WEDNESDAY'S RUN, 156 MILES.

Shrewsbury, Marton, Welshpool, Dinas Mawddwy, Llanuwchllyn, Bala (lunch), Llanwddyn, Llanfair Caereinion, Newtown, Knighton Penybont, Llandrindod Wells.

EXCEPT for Bwlch-y-Groes, Wednesday's run did not promise much in the way of difficulties. Long Mountain and the Hirnant Pass, the two unknown quantities to most of the competitors, failed to provide any unpleasant surprises, although a greasy upgrade a mile or two out of Welshpool might have been the cause of lost marks had there been anybody there to watch the fun.

Yet, taken as a whole, the day *was* difficult, if only because of the number of long second-gear climbs, such as only Wales can provide. Perhaps no machine fails on these at the time, but later on poorly designed engines begin to lose power in an unaccountable manner—and another batch of unfortunates remove their official numbers. On Wednesday the party numbered six. (A detailed list of retirements day by day will be found on a later page.)

An Easy Test Hill.

Long Mountain had dried too well after the previous night's rain to cause much anxiety. Riders toured up in batches of nine or ten, and in consequence of this some of the faster men had perforce to "touch" as they took to the rough to overtake. J. H. Davies (492 Sunbeam) was a clever exception.

The hill does not merit that everybody's performance should be mentioned, and in order to avoid undue publicity to the usual dozen or so very fast riders our account must be confined to the odd incidents.

For example, a Scott followed a Lea-Francis over a patch of semi-slime. The latter wobbled slightly; the former went up like an arrow, which reminds us that, excepting perhaps the solo Sunbeams, the large-tyred machines were infinitely steadier in grease than the 26 in. × 2¼ in. brigade.

Fast Ascents.

Reg. Brown's and T. C. de la Hay's sidecar Sunbeams shone here more in the manner expected of them earlier.

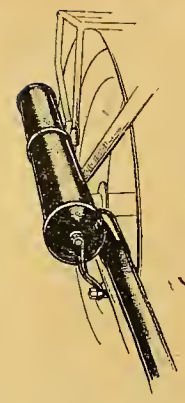
Had the climb been timed, W. D. Pugh (989 Harley-D) and G. F. Bainbridge (739 Martinsyde) would probably have tied for first place.

Of the sidecars, Giles (A.J.S.), Baxter (Harley), Chater-Lea (Chater-Lea), Newey (Ariel), Barton (Matchless), and the irrepressible Wildblood (494 Douglas) appeared the fastest; but, showing how difficult it is to estimate in this matter, Hardee (Matchless sc.) had just earned a "very fast" in our notebook when McCardle (Harley D. sc.) actually overtook him on the steepest portion.

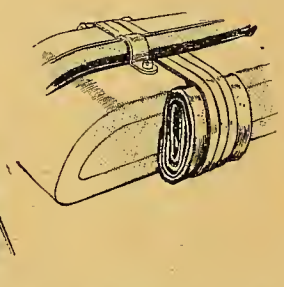
The failures were: Danskin (499 Rudge sc.), Harrison Watson (550 Triumph sc.), who baulked J. H. Walker (770 B.S.A. sc.), Saddington (749 James sc), and T. J. Ross (993 Matchless sc.). It was not lack of power in the last case.

Bwlch-y-Groes was the next official point of interest, but it is a pity that the Welshpool hill was not observed.

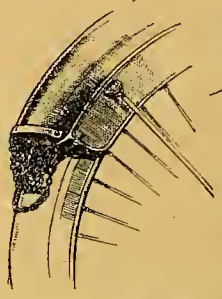
FITMENTS ON THE COMPETING MACHINES.



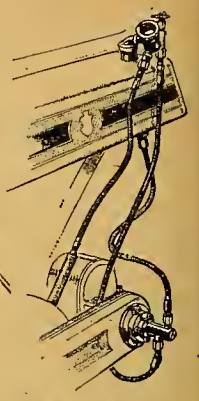
Exhaust box fitted on Harry Reed's Dot outfit.



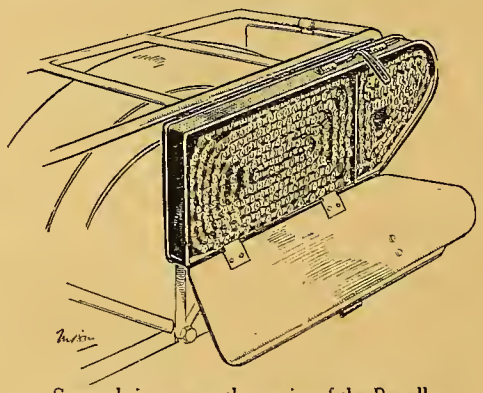
An old inner tube used as a knee grip on J. A. Leyland's P. and M. The tube is strapped to the tank.



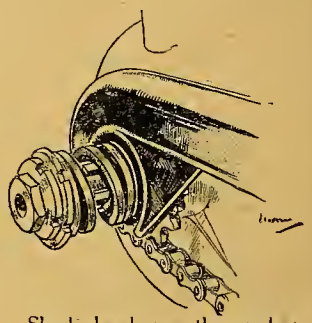
A chain nail puller on C. F. Nott's Raleigh.



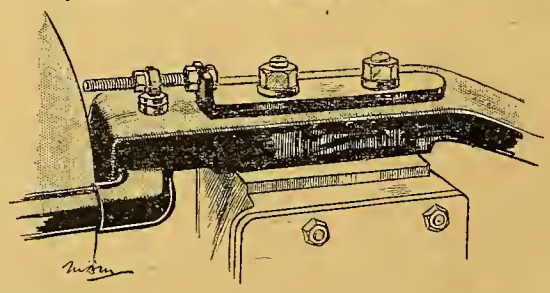
Mechanical pump lubrication and sight feed on J. Harrison Watson's Triumph. Note the flexible tubing.



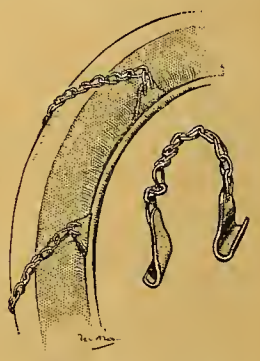
Spare chain case on the carrier of the Powell.



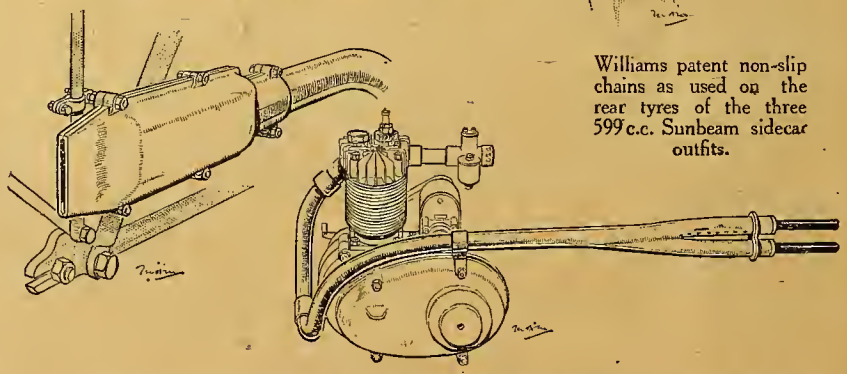
Shock absorber on the crankshaft sprocket of the Raleigh.



Gear box adjustment on the new chain driven Raleigh lightweight.



Williams patent non-slip chains as used on the rear tyres of the three 599 c.c. Sunbeam sidecar outfits.



(Left) The sports model Powell had a large Argus silencer bolted to the carrier stays. (Right) Twin outlets were used for the exhaust of the Beardmore-Precision.

A string of solo riders on the Hirnant Pass climbed after lunch on the third day. H. Greaves (349 c.c. Beardmore-Precision), Geo. Dance (499 c.c. Sunbeam), A. Bennett (499 c.c. Sunbeam), A. G. Wall (348 c.c. Connaught) and C. Greenwood (499 c.c. Sunbeam).

On the way to Bwlch-y-Groes (the Pass of the Cross) rain fell occasionally, which troubled the competitors on the narrow, winding foothills leading to and beyond Dinas Mawddwy. Here the right-hand road was taken to Bala (not the road to Dolgelley often confused with Bwlch-y-Groes). Bwlch-y-Groes is 1,750 ft. above sea-level, and the wonderful panorama of rolling hills—the wildest and finest country that Wales can produce—was appreciated to the full by the crowd of spectators who patiently awaited the arrival of the long line of competitors. Meanwhile motor cycles and cars arrived one by one with their quota of observers, some successful, others not so.

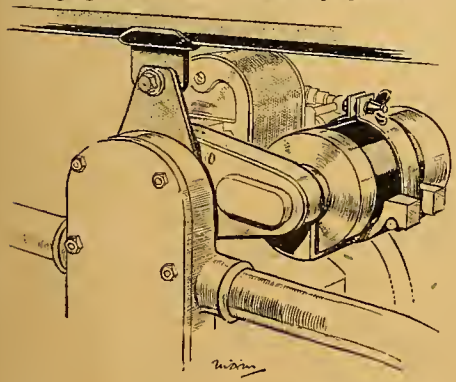
Bwlch-y-Groes.

Mr H. R. Watling, General Manager of the Motor Cycle Manufacturers' Union, who accompanied the trials on a 348 c.c. Raleigh, made a good ascent, a private owner followed on a Scott, which, even handicapped by a passenger on the carrier, cruised up with ease. A couple of 349 c.c. A.J.S. side by side romped up, so that quite early one was prepared for successful climbs of this two-mile ascent averaging one in five or six—by general consent the fairest and finest test hill in the country, for the surface is good, and steep gradient alone decides the issue.

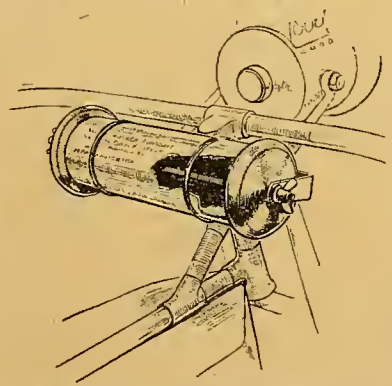
P. L. Mayo (249 Coventry Eagle), led the way at 11.15 a.m., Kershaw (249 New Imperial) following closely in his track. Both made comfortable climbs with their diminutive engines. Two non-competing cars hereabouts stopped on the crucial stretch fifty yards above the gate and had to be parked beside the road in the place usually kept clear for competing machines which falter on the hill. Johnson (247 Sun Vitesse), Pa Applebee, and Edwards (Levises) also made this one-time formidable Welsh ascent look easy.

Fine Ascents by Lightweights.

Mrs. Knowles, on her A.J.S. who came next, was quite fast, passing several other competitors on the way up. C. W. Hough (A.J.S.) was also quick, passing three riders, whilst Harris (A.J.S.) was little slower. The fine performance of the tiny J.E.S. ridden by Purnell was acknowledged by hearty applause from the spectators assembled. His 169 c.c. engine never faltered and required no assistance—surely an epoch-making achievement. After this one could hardly evoke special enthusiasm for the larger machines, for practically all got up well, some with plenty of power in hand, others preferring to impress by fast middle-gear climbs. Horton (New Imperial) bounced on the saddle, and nearly baulked his team mate (Wilkins). Davison got a cheer for his recent remarkable exploits on his two-stroke Levis. Greening (Francis-Barnett) was good, N. Hall (292 O.K. Junior) excellent, Searle (Sheffield Henderson) good, also Bishop (Sun Vitesse), and R. Evans (Raleigh). Eric Barnett (Francis Barnett) passed three other riders, Lovegrove (Radco) toured up comfortably, Cholderoft (A.J.S.) toyed with the gradient, Handley (O.K. Junior) was notably good, and Graham Oates (on the new 248 Grindley) quite fast. Thereafter a big bunch of competitors toured up the gradient as if it did not exist, including Sprosen (Connaught), Dodson (Royal Ruby), Hadfield (348 Raleigh), Clulee Johnson, and Cooper, on two-stroke Allons, Lidstone (James), Parkes (Sun Vitesse), Kimberley (James), and Mrs. Janson (Coventry Eagle). Ladies are always popular in trials, and Mrs. Janson's ascent was suitably applauded. C. F. Nott showed up well on a 348 c.c. Raleigh, also Anderson (293 Connaught).



Lucas dynamo gear-driven from the magneto shaft of the Raleigh flat twin.



Revolving route card carriers were used on the two Lea-Francis machines. The card was rolled between two tubes of celluloid which keep it dry in wet weather.

The Heavy Brigade.

Then followed representatives of the larger classes, Cathrick (499 Dunelt) doing well. J. H. Davies (599 Sunbeam) in the 750 c.c. class was next, well ahead of time, "blinding" up—to use a motor cyclist's favourite term—with his back down. Longman's performance on the new all chain driven Zenith, was excellent, also F. C. North (292 O.K. Junior). To this point no failure had been recorded on the upper and steepest stretch, although for half an hour the riders had filed past. Hills (Royal Ruby) had to footslog on the steepest part, but picked up again. Hardman (499 Wilkin) was very fast, actually changing up. A pause, and in the distance one saw a rider streaking past his fellow competi-

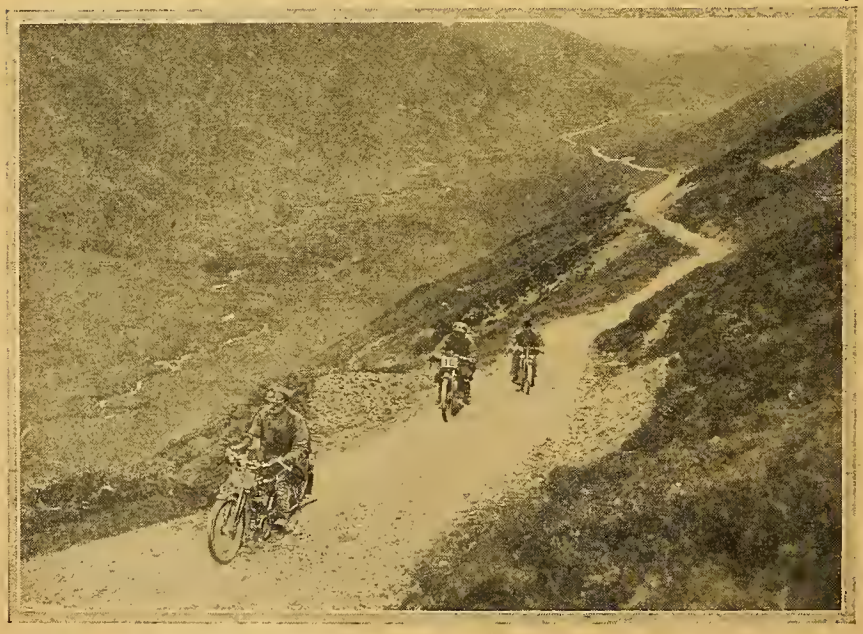
Six Days Trials Described.—

tors. It was R. M. Knowles, the Norton private owner, smoking a pipe nonchalantly. Then followed Woodcock (Ariel), Rollason (Ariel), Wall (Connaught), and Greaves (Beardmore-Precision), all going well. Three others together, Moore (Scott), W. Scott (Scott) and Foster (Raleigh), travelled well, and Beedon (Sunbeam) and Bainbridge (739 Martinsyde) simply toured up. Westwood Wills (547 Powell) made a spectacular ascent at speed, Newman (Douglas) took matters easy, and was passed by Bridcutt (499 Dunelt). G. Hill (Scott) toured up comfortably, Whitfield (Rudge) and Longman (Ariel) were steady, Austin (Coventry Victor) had power to spare, and Gard (Rudge) was good. Possibly Geo. Brough's climb was the fastest of all, for his Brongh Superior was in fine fettle. After Ranson (Lea Francis) had toured up, a bunch of eight riders were seen approaching the gateway which marks the beginning of the crucial stretch. All got up well. Geo. Dance (499 Sunbeam) emerged with Bennett (Sunbeam) ahead of the rest, T. Peck (Ariel), Becker (McKechnie), Pugh (Harley), Cross (Triumph), Burnett (Raleigh), and Greenwood (Sunbeam). Buckle (F.N. four-cylinder) buzzed up at speed, followed by Davidson (596 Indian Scout), Phillips (Triumph), J. M. Philpott (Beardmore-Precision), and Leyland (P. and M.).

Performances of the Passenger Machines.

It was 11.45 a.m. before the first sidecarists hove in sight, Cunningham (555 P. & M.) with Lewis on a similar mount, leading the way. T. C. de la Hay (599 Sunbeam) was close on their heels, the brothers Bashall on 678 c.c. Martinsyde following. All were good. E. Mundey (New Hudson) and Symes (Martinsyde), Bourke (New Hudson), Brown (599 Sunbeam), Bischoff (Sunbeam), Townsend (P. & M.), formed a group of notable performers, but Bridgman (998 Indian) easily took the palm for speed. Pehrson (Dunelt) and Jacobs (Beardmore-Precision) were good, but bad luck befel Swanton (998 Indian), who stopped and ran back some yards. Hadley (Rudge) immediately behind repeated the performance. When Wildblood (499 Douglas) arrived he had to yell to clear the course, what time he bounced vigorously on the saddle. Perry's 770 c.c. B.S.A. got up comfortably, also Walker and Bird on similar mounts, Giles (A.J.S.) made no mistake, Bucknell (Matchless) and Ellis (Matchless) also doing well. Newey's 994 c.c. Ariel had plenty in hand, Baxter (Harley Davidson) and Barton (Matchless) were good, but Ross (Matchless) came to a standstill due to a broken chain which delayed him some minutes. Cotton (749 James) stopped, and then ran alongside, but the next batch were all good, viz., O'Brien (Matchless), Hardee (Matchless), Johnston (Harley), Wade (A.J.S.), Poole (A.J.S.), and Allchin (Harley). Hall drove the first Morgan up the hill and was notably fast. H. F. S. Morgan, on the runabout bearing his name, actually changed up, but was soon down again. Carr (Morgan) was also fast. Chater-Lea (976 Chater-Lea) showed up well, also Spouse (T.B.), Frank Smith (926 Clyno), and McCardle (Harley).

F. S. Spouse piloting his 980 c.c. T.B. three-wheeler up the famous Bwlch-y-Groes. Even in this outlying district many spectators witnessed the ascents.



A panorama on the Hirnant Pass on Wednesday afternoon. F. W. Applebee (247 Levis) and Mrs. O. M. Knowles (349 A.J.S.) followed by a non-competitor on a Scott.

At the End.

The Scott Sociable had been anxiously awaited, and the driver appeared half sitting over the driving wheel, his engine pulling merrily. It appears that he was baulked at the hairpin at the hill foot, and was delayed six minutes before his engine fired again. By 12.15 p.m. all the competitors had passed Saddington (James sc.), bringing up the rear, but he stopped momentarily on the 1 in 5 stretch.

The descent to Bala for lunch was particularly rough, rock protruding through the roadway and buffeting the machines. But this was as nought to what followed after lunch. First the riders travelled by way of villages bearing tongue-twisting

Six Days Trials Described.—

names over the Hirnant Pass, and down the never-to-be-forgotten descent to Lake Vyrnwy, cut up beyond recognition by heavy timber waggons. Numerous cross gullies or gutters varying in depth twisted and strained the sidecar mounts particularly—a twelve mile stretch equal in severity to anything Scotland can produce.

But we digress.

The Hirnant Pass.

Hirnant Pass is a climb of 1,500 feet, almost as sevcre as Bwlch-y-Groes. Although motorists were warned by old and disfigured R.A.C. signs that the road was impassable, without exception every rider made light of it. Solo competitors toured up in second gear, and had it not been for the many deep and water-filled gullies, it would have been taken at really high speeds. As it was several riders made ascents that were foolishly fast. Westwood Wills (547 Powell) and J. H. Davies (599 Sunbeam) were particularly spectacular, plunging recklessly over the gullies regardless of consequences which might ensue, for a skid on the loose shale surface would have precipitated them over the unprotected edge into a ravine a hundred feet below.

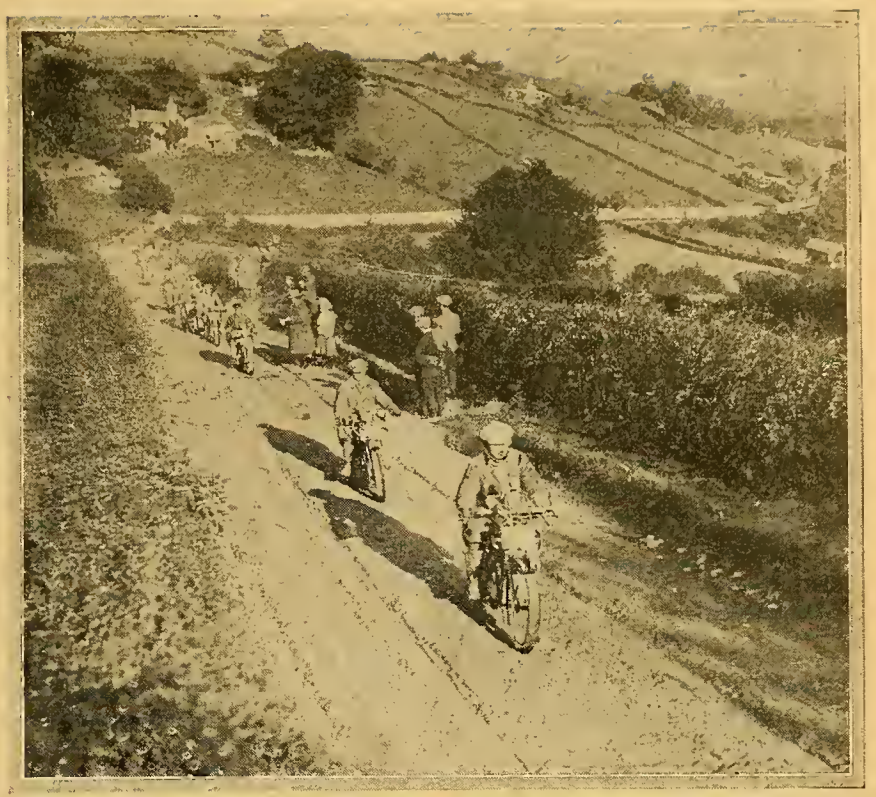
These riders, however, did not monopolise this entertainment enjoyed by the many spectators who had journeyed to witness how modern British machines can perform on Colonial type mountainous roads. The three Scott's, ridden respectively by G. Hill, W. Scott, and W. Moore, were equally fast. George Brough (Brough Superior) also climbed the tortuous shale-strewn path in a spectacular manner, jumping clear of the ground at one particularly awkward gully, and was nearly unseated. T. Peck (Ariel) followed in a like manner and narrowly escaped colliding with J. M. Philpott (Beardmore), who was taking things more easily.

Some of the riders revealed a different temperament, for they ascended the rough cattle way very steadily. J. A. Newman (494 Douglas) was evidently taking no chances, and was playing to a larger audience than is assembled on any trials test hill, *i.e.*, the general public, which judges results on the award obtained. E. Foster (698 Raleigh), P. H. Hills (349 Royal Ruby), F. W. Becker (688 McKechnie), and D. H. Davidson (596 Indian) were also in this category.

Little Work for Observers.

The official observers with checking sheets having ample space to record all kinds of failures, had nothing of this nature to report, and it came as quite a relief to them when one man, C. J. P. Dodson (349 Royal Ruby) was reported to have used his feet or missed his gear change or "something," for they were not sure.

Special mention, perhaps, should be made of the little J.E.S. ridden by R. P. Purnell. By climbing Bwlch-y-Groes and the Hirnant Pass as steadily and as easily as most of its larger contemporaries, it proved, anyway up to this point, that the miniature engine, less than half the size of Junior T.T. machines, was a practicable proposition not only for general utility work about city streets, but in a tourist's machine.



Filing up Long Mountain, the first test hill on Wednesday morning. The leaders are E. A. Barnett (346 Francis Barnett), C. W. Hough (349 A.J.S.), F. W. Applebee (247 Levis).

One could not but admire the performances of the sidecars. Without exception they were excellent, although the speed at which the competitors drove them over the gullies brought forth prophesies of fractured frames and chassis later in the week.

Speedy Sidecars.

P. Cunningham (555 P. and M. sc.) and R. Lewis (555 P. and M. sc.) were the first pair of passenger machines to follow the solo men, and they emulated the latter's spectacular methods, sending up high "bow waves" as they crossed the water courses. T. C. de la Hay (599 Sunbeam sc.) was just as fast and had to pass a stalled non-competitor who forced the sidecar driver to take a path perilously near the edge of the precipice.

G. M. Townsend (555 P. and M. sc.), R. Brown (599 Sunbeam sc.), and P. Pehrson (499 Dunelt sc.), ascended at a more steady pace, the last-mentioned only changing to bottom for the last 100 yards of the long climb.

B. Bourne (595 New Hudson sc.) picked his way more carefully, and obviously had plenty of power in hand, as had E. R. Jacobs (598 Beardmore sc.). A. W. Handley (499 Rudge sc.) did well, while the 494 c.c. Douglas sidecar driven by J. W. Wildblood again made a splendid climb.

A. A. Symes (678 Martinsyde sc.) was too fast for the comfort of his lady passenger, who had to raise herself from her seat to minimise the full force of the shocks as the machine was forced over the gullies at speed.

W. H. Bashall (678 Martinsyde) heeded not the mute appeal for mercy from his lady passenger, and drove on as if the twain were rendering the Excelsior duet.

J. T. Bashall (678 Martinsyde sc.) was slower, but only by choice, and E. Mundey (595 New Hudson sc.) came up looking down anxiously as if expecting to find his tyro flat.

For a moment, perhaps, the bored observers thought they would have something to record, but luck was against them.

More Passenger Comfort Wanted.

Sidecar passengers among the spectators were asking one another why the competitors' companions had not insisted upon the inclusion of pneumatic cushions in their equipment.

R. Swanton (998 Indian sc.) had evidently overcome the trouble that had stopped him on Bwlch-y-Groes, for he climbed exceptionally well, as did Frank Smith (926 Clyno sc.).

It is impossible to add to the list of those who made sure ascents; as before mentioned none stopped.

The descent from Hirnant was not at all enjoyable, but the rest of the run to Llandrindod Wells should not have required bottom gear anywhere—unless from the lightweights, on one ascent.

J. W. Wildblood (494 Douglas sidecar) making a speedy ascent of Llanfair Hill.

Mrs. G. M. Janson (349 Coventry Eagle) and R. Evans (348 Raleigh) on Long Mountain.

Harrison Watson (Triumph sc.) lost so much time owing to his front tyre leaving the rim that he retired, and a broken valve put Danskin (Rudge sc.) out. W. H. Hardman (499 Wilkin), who previously had been one of the great majority of good but not spectacular and therefore often unnoticed riders, took two nasty tosses, the second damaging the Wilkin too much to continue.

THURSDAY'S RUN, 171 MILES.

Llandrindod Wells, Llangynog, Llandovery, Brecon, Llangynidr, Gilwern, Abergavenny (lunch), Blaenavon, Pontypool, Abergavenny, Monmouth, Tintern, Mitcheldean, Gloucester.

SEVERAL things happened on Thursday. For the first time in the trials it rained really heavily. In itself this fact would not be important, but it so happened that the last hill of the day—a minor test that scarcely anybody knew of—was of the sort that required only slight lubrication to convert it into very nearly the worst hill of the week.

The rest of the route was more in the nature of an endurance test; there was a great deal of second gear slogging, and, consequently, hard riding to keep to schedule. The toll of retirements was five.

After eight miles the fun started with a long climb over the mountains, where possible *via* grass-grown and rock-bottomed roads, but never over really bad surfaces. Thirty-five miles of this sort of thing was followed by an equal distance over main roads, which brought the riders *via* Brecon to the Llangynidor Pass.

Footing and "Footing."

Nowhere was it steep enough or rough enough to cause an outright failure, but we spent an interesting half-hour on the least easy hairpin bend watching Dr. Hopwood endeavour to discriminate between "footing" to preserve balance and "footing" to assist the machine. Eventually it was decided that "Pa" Applebee (Levis) and J. Grabam Oates (Grindley) were guilty of the latter offence. Why W. Scott (532 Scott) had to prod is a mystery, but in the case of a Royal Ruby rider it was simply that he was not at home on loose stones. T. Buckle (748 F.N.) moved his foot, but then decided to replace it. J. Watson Bourne, who had taken over G. Brough's machine owing to the latter's indisposition, looked very bored.

Between the lower and upper hairpins, we observed three sidecarists effecting adjustments. These were J. W. Wildblood (494 Douglas sc.), T. R. Allchin (989 Harley-Davidson sc.), and C. W. Johnston (989 Harley-Davidson sc.). The first-mentioned had evidently developed real trouble after a noteworthy performance right up to this point, for as the competitors left Abergavenny after lunch they passed him in tow of a motor 'bus, his transmission sprocket having sheared. Thus Pehrson's Dunelt was the only 500 c.c. sidecar left in the trial.

Thereafter to the Abergavenny lunch stop there was far less main road than even the official route map might have led one to expect, and sudden detours and tortuous descents at the last moment caused several to experience difficulty in getting in on time. One of these, Pa Applebee, suffered a stuck release valve on the top of other troubles.

At lunch, A. R. Edwards (Levis) fitted a gaiter to his rear tyre; and it was reported that R. M. Knowles (Norton) had been towed into Brecon owing to gear box trouble.

A No-trouble Hairpin.

After lunch the competitors were led to the Fiddler's Elbow, a hairpin with a local reputation, but which proved easy to every competitor. Being near a centre where many enthusiastic motor cyclists reside, a big crowd of spectators congregated to witness what proved to be nothing more than a display of regularity and fast cornering. Probably some of the competitors wished that the hill were miles away from civilisation, for several non-competitors considered it good form con-

On the Wrekin, which was climbed by solo riders only. The gradient was not at all severe as test hills go, but there were difficulties which precluded the sidecars from entering the section. G. Kimberley (349 James) is the rider shown breasting the summit.

The bombardment of Rosedale Abbey Bank. F. Parkes (247 Sun Vitesse), B. H. Cathrick (499 Dunelt) and O. S. Bridcutt (499 Dunelt) can be discerned in the smoke screen.

tinually to ride up and down while the trial was in progress. Here Professor Low was comfortably seated in a car making notes on "silence."

A detour brought the now thoroughly soaked riders back to Abergavenny, and almost all the way to Monmouth it was greasy by-lanes and short hills. Mrs. Knowles (349 A.J.S.) suffered from water in her magneto, and P. L. Mayo (249 Coventry-Eagle) stopped on Upper Lydbrook Hill owing to oil on his magneto carbon brush.

Generally speaking, however, so little happened (except rain) that the pressmen were getting bored with the whole affair. Longhope Hill proved their salvation! It has a hard embedded stone surface of the typical unfinished kind of country lane, and on Thursday afternoon was coated with so much slime that walking required care. Only the solo machines were sent up.

It was impossible to observe all the hill at once, but all of it was treacherous; our remarks apply only to the upper reaches.

On a Greasy Hill.

The early lightweights, having a clear run, made quite a good show. Davison (Levis), Applebee (Levis), Kershaw (New Imperial), and Horton (New Imperial) being most steady. Mrs. Knowles (A.J.S.) disappeared round the top bend in great style, but Mrs. Janson (Coventry Eagle) was not so fortunate; eventually she fell. But she failed in good company, for Dance hit the bank at speed and baulked his two Sunbeam teammates, Greenwood and Bennett. All three got going again in good style. C. J. P. Dodson's (Royal Ruby) clutch appeared to cease functioning temporarily, and R. P. Ranson (Lea-Francis) almost relinquished all control of his bucking mount. H. M. Beedon (499 Sunbeam), A. Rollason (498 Ariel), and B. C. Browning (349 Royal Ruby) should not lose any marks for their climbs. When G. E. Austin (Coventry-Victor) came to the inevitable stop—his machine simply would not go straight ahead—he baulked F. A. Longman (498 Ariel), and in the same way T. Peck (665 Ariel) prevented Westwood Wills (Powell) from getting up. Wills fell twice without stopping his engine, but three was not his lucky number in this instance.

Plucky do-or-die climbs were made by J. A. Newman (Douglas) and J. H. Davis (T.T. Sunbeam), and W .T. Woodcock (498 Ariel) was very sure. The three Scotts once again excelled, W. Moore's being really wonderfully steady and unfussing. Becker's spring frame McKechnie seemed to take to the grease like a duck to the water; his climb was as good as any except the Scotts'.

A very high low gear ratio proved the undoing of Bainbridge's Martinsyde, but despite several tumbles his time for the whole distance must have been very nearly fastest of the day. Pugh's big Harley also proved very unmanageable, a foot-controlled clutch had obvious disadvantages. Watson Bourne (976 Brough-Superior) made a magnificent climb until he fouled the handle-bars of A. A. Verity's Triumph. The only other heavy weight to make an imposing ascent was Burnett's 698 c.c. Raleigh.

FRIDAY'S RUN, 182¼ MILES.

Gloucester, Stroud, Tetbury, Birdlip, Northleach, Whitney, Oxford (lunch), Dorchester, Watlington, Princes Risborough, High Wycombe, Maidenhead, Windsor, Staines, Chertsey, Weybridge (Brooklands).

TOWARDS the end of a strenuous trial the competitors get tired or reckless or bored. The finish seemed in sight on Friday morning, and some of the riders apparently ignored the wisdom of "many a slip betwixt . . ."

There was much careless cornering—overshooting turns, etc.—and not a few minor crashes on Cotswold and Chiltern clay. Although there was not one real hill in a morning's run through country famous for its great climbs, there were many unpleasantly slippery lanes. One of

D. H. Davidson (596 Indian) and W. T. Woodcock (498 Ariel) making light of Llangynidr Pass.

Six Days Trials Described.—

these, about ten miles from the start, got half the solo entry wobbling and brought several to the ground, all within 20 yards of one another. Lovegrove (Radco) hurt his leg here, but carried on.

Later, after traversing Miserden Park and some gloriously English country, in most pleasant contrast to the bleak Welsh mountains of the morning before, a second gear observed climb was made less easy by the presence of a shallow water-splash at its commencement. Here C. W. Hough (349 A.J.S.) came to a stop, either with a shorted plug or with water in the carburetter, and T. Buckle (748 F.N.) fell.

Another Detour.

The only survivor of the unlucky Rudges, F. S. Whitfield's, knocked on the hill but did not stop. Both the new solo James were as sure and steady as any, but it was left to the new Brough-Superior, still in the hands of Watson-Bourne, to make the most effective climb, although J. H. Davies (T.T. Sunbeam) was nearly as speedy. Dance, after his adventures on Longhope on the previous day, appeared to be holding back slightly, and the rest of the solo Sunbeam team took their cue from him.

After fifty miles of mixed going the riders had only reached the summit of Birdlip, and it was not until Northleach that continuous main road to Oxford was joined.

Apprehension.

At lunch there was an extraordinary amount of apprehension—"wind-up" is the apter term—about Alms Hill. According to the latest dictates of the A.C.U. it was to be a penalty as well as a bonus hill—*i.e.*, plus five marks for a clean climb, minus five marks for a failure. Sportsmen who had lost their maximum for a gold debated the knotty point vigorously, but usually without coming to any conclusion. Five bonus marks were very tempting; but Alms Hill was reputed to be a real terror when wet. And of course it would be wet!

Very glutinous-surfaced by-lanes on the way to Henley, moreover, seemed in the nature of a practising ground, and by the time the parting of the ways was reached most of the riders were in a state reminiscent of one's first day in the trenches.

Then, one by one at first, and later in batches as they arrived at the foot, they discovered that the hill was remarkably dry. It was five easy marks for all but two who attempted it.

All Who Climbed Alms.

The heroes are enumerated below:

Very fast, very steady climbs: J. A. Watson-Bourne (976 Brough-Superior); on a *middle* gear of about 5½ to 1. W. D. Pugh (989 Harley-Davidson); only slightly slower.

Very fast, steady climbs: G. Dance (499 Sunbeam); as speedy as Watson-Bourne, but necessarily more fussy and spectacular. A. Bennett (499 Sunbeam); ditto, probably steadier than Dance. J. H. Davies (492 Sunbeam); as good as he had been doing all through the event.

Fast and effortless: E. H. Gifford (496 Martinsyde). F. S. Whitfield (499 Rudge). W. N. G. Phillips (499 Triumph). J. Westwood Wills (547 Powell); carelessly rubbing his eye as he breasted the "cannons." J. M. Philpott (598 Beardmore-Precision). T. Buckle (748 F.N.). W. T. Woodcock (498 Ariel). D. H. Davidson (596 Indian Scout); with slight rear wheel skidding.

Fast and imposing lightweights: L. Lidstone (349 James). E. Searle (349 Sheffield Henderson). C. W. Hough (349 A.J.S.). H. F. Harris (349 A.J.S.). J. Graham Oates (248 Grindley). E. A. Barnett (345 Francis Barnett). J. Wilkins (249 New Imperial). G. S. Davison (247 Levis); changed up just past the "cannons."

Effective, but more cautious: P. L. Mayo (249 Coventry Eagle). Mrs. O. M. Knowles (349 A.J.S.). A. R. Edwards (247 Levis); waved to a friend among the spectators. B. Kershaw (249 New Imperial); taking no chances. M. Bishop (247 Sun-Vitesse). F. Parkes (247 Sun-Vitesse); slightly baulked. C. L. Sprosen (348 Connaught). W. Handley (292 O.K.-Junior). E. W. Cholderoft (349 A.J.S.). I. F. Anderson (292 Connaught); very slow, but possibly intentionally so. G. Kimberley (349 James). H. Greaves (349 Beardmore); quite fast, but appeared to hold back considerably. C. Greenwood (499 Sunbeam); very speedy on second gear, then changed down. B. H. Cathrick (499 Dunelt); not spectacular, but exceptionally steady. A. Rollason (498 Ariel); changed down at "cannons." E. S. Burnett (698 Raleigh).

Clean climbs: L. Horton (249 New Imperial); bounced on steepest portion. F. W. Applebee (247 Levis); feet ready, but did not touch. J. Johnson (247 Sun-Vitesse; touch-and-go on the "cannons." F. C. North (292 O.K.-Junior); wobbled considerably. Mrs. G. M. Janson (349 Coventry Eagle); almost footed. F. A. Longman (498 Ariel); changed down too late, and unsteady low down.

Failed: H. M. Beedon (499 Sunbeam); charged "cannons" while attempting to change gear. T. Peck (565 Ariel); apparently unable to find low gear.

Several of the soloists footed in the "porridge" surface near the summit, but obviously not from lack of power.

Twenty-one sidecars and four three-wheelers made the attempt, and all except one—Frank Smith (926 Clyno)—were successful. The P. and M.'s led the van; R. Lewis's was, for a moment, expected to fail, but it pulled gamely through; Townsend's was fastest. Only Reg Brown of the Sunbeam sidecar team took the risk, and of course he was justified, although he seemed none too happy with his steering. P. Pehrson and the passenger in his Dunelt sidecar chatted unconcernedly together as they ambled easily upwards—a very fine performance from the smallest passenger outfit left in the trials.

Fastest Sidecars.

The remainder of the successful sidecars were big twins, and their climbs must be summarised. As usual, Giles (A.J.S. sc.) was fastest, but a tyre burst near the top, without, however, bringing him to a stop. L. F. McCardle (989 Harley-D. sc.) was only fractionally slower, although considerably less spectacular. The three Martinsydes were clean—W. H. Bashall's ascent being best— and H. S. Perrey's was most effective of the three B.S.A.'s. The nominated Harley team all did well, although C. W. Johnson and his passenger both looked frightfully worried. J. Chater-Lea, on the outfit bearing his name, was quite good, as was O. Wade on the second A.J.S., although it did not answer the helm too well.

W. Bucknell's outfit was the most effective of the three Matchlesses to come up, O'Brien's being fair, and Ellis's not at all impressive. These three were among the few to use Parson's chains, and they did not appear to be of much help in this instance.

S. Hall's two-speed Morgan was considerably better than H. F. S. Morgan's own four-speed model; Spouse on the T.B. and Carr on the third Morgan both made excellent climbs.

Thus it was proved that gradient alone cannot stop the modern motor cycle or three-wheeler.

Minor Misfortunes.

Sudden turns, minor hills, and patches of muddy going followed during a 40-mile detour to Marlow. Over-shooting of corners continued to be too common; in one melee Dance, who pulled up because two James had missed a turn, was rammed by Verity (499 Triumph). The latter, on a strange machine and in his first trial, was again unfortunate later. He ran into a large dog at Marlow and bent things considerably; pluckily he continued.

When making a minor adjustment to his Matchless by the roadside, E. C. Barton was knocked down heavily by a following sidecar. He was unable to go on, but his machine was taken to Brooklands for its "gold" by an official.

No. 13, J. Graham Oates (Grindley), arrived at Brooklands very, very late, and explained that he had had valve trouble, remarking to Mr. Loughborough that he never wanted a similar number allotted to him again! E. S. Burnett (698 Raleigh) was noticed by the roadside repairing a front tyre, apparently in serious trouble, for he failed to reach Weybridge that night.

On the whole, therefore, the day was a stiff one. There were four retirements.

SATURDAY, 68 MILES ON BROOKLANDS.

Brake Test, 25-Lap Speed Trial, Final Hill Climb and Examination.

THE surprises of the final speed tests were the number of cases in which the minimums were exceeded by a large margin, and the comparatively small amount of trouble caused by a gruelling 25 laps under a glaring sun. The required speeds were: 250 c.c. solo, 30 m.p.h.; 350 c.c. solo, 35 m.p.h.; 500 c.c. solo, 40 m.p.h.; 750 c.c. solo, 44 m.p.h.; 1,000 c.c. solo, 48 m.p.h.; 600 c.c. sidecars, 32 m.p.h.; 1,000 c.c. sidecars 38 m.p.h.; 1,100 c.c. three-wheelers, 38 m.p.h.

250 c.c. and 350 c.c. machines were dealt with first, a rough and ready brake

Start of the high speed test at Brooklands for 250 c.c. and 350 c.c. machines. The riders had to maintain 30 and 35 m.p.h. respectively to qualify for full marks.

test on the test hill being staged on the way to the fork start. Except for bonus marks, there was little to be gained by racing, but Mrs. Janson (349 Coventry-Eagle) and E. Searle (349 Sheffield-Henderson) immediately started a small T.T. on their own. They finished closely, the latter just leading, but Mrs. Janson paid the penalty later, for she could not make her engine fire when the time came to reclimb the test hill for the final examination.

The lap-scoring arrangements were excellent, but several riders made their own additional counting apparatus. Pa. Applebee was said to carry 25 pebbles in his pocket; and Mrs. Knowles had a cardboard "comb" on her handle-bars.

Eleventh-Hour Troubles.

Valve and plug troubles were the chief difficulties. Unlucky Graham-Oates (Grindley) broke another valve and could not remove the cap. At last he was forced to retire, after a very fine performance, marred only by misfortune. S. E. Longman (349 Zenith) was similarly troubled, but completed the course. The J.E.S. plugged steadily round, but it was reported that Purnell had difficulty in feeding the tiny engine with oil.

Several stopped for petrol, including A. R. Edwards, who called attention to the phenomenally cool condition of his Levis engine. A detailed schedule of the speeds attained will be found in the page giving the final awards.

The test hill was vanquished by all the survivors, but not always with ease.

Fast Solo Mounts.

The same sequence was now followed with the 500 c.c. and 750 c.c. solo machines. Westwood Wills (547 Powell) split his belt rim coming down the hill and so lost his only marks—eight—in the trials. Whitfield's Rudge was again obstinate, but was eventually persuaded to the starting line. It was of no avail, for another two exhaust valves went, and the machine was withdrawn.

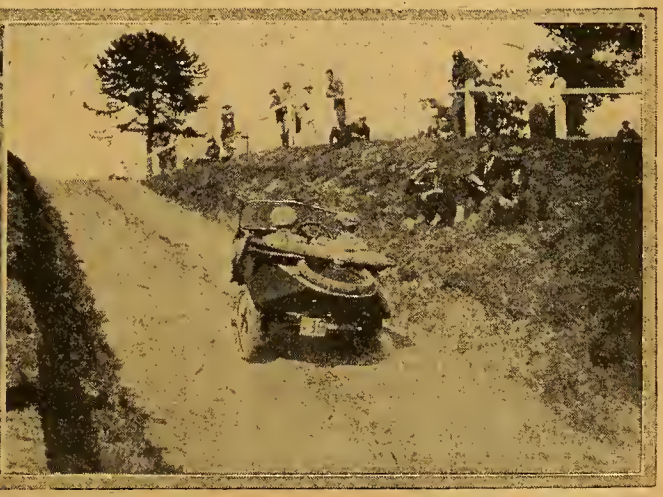
Dance (Sunbeam) announced his intention of going steadily. He must have changed his mind, for only G. F. Bainbridge's "Quick Six" Martinsyde was able to get ahead of him. Bainbridge had had a rough time during the road portion of the event—his lowest gear was in the neighbourhood of 9 to 1, and probably, in consequence, the Martinsyde steering-head was in a parlous state—but he was always a notable performer, and he finished up in a haze of glory *two laps ahead of Dance.*

Two spills marred the proceedings—T. Buckle (F.N.) and B. H. Cathrick (Dunelt) burst front tyres at the same spot on the track—and although at first the latter's injuries were reported to be serious, it happily turned out that neither was seriously hurt.

Few Adjustment Stops.

If anything there were considerably fewer adjustment and repair stops than in the previous classes. Phillips' four-valve Triumph was opened out on the last lap and was timed to go round at 60 m.p.h. Becker's McKechnie and Philpott's Beardmore were surprisingly fast; spring frames were evidently an advantage to newcomers to the track.

F. A. Longman (498 Ariel) in the brake test.



D. Rhodes (578 Scott Sociable) on the test hill at Brooklands.

Six Days Trials Described.—

T. Peck (665 Ariel) again tried top gear hill-climbing and failed, and Westwood Wills came up—a little way!—with his petrol turned off.

Watson-Bourne on the Brough-Superior and Pugh on the Harley were started with the 600 c.c. sidecars. The former immediately commenced lapping at 63-64 m.p.h., and his last circuit was unofficially timed as 2m. 20s., 69.8 m.p.h. The Harley rider complained of vibration, and was lapped several times by the British production.

Slow Sidecars.

None of the sidecars went in for high speeds; it was mainly a series of uninteresting processions. P. W. Bischoff adopted a super-racing attitude, but drove the slowest Sunbeam. B. Bourke's gearbox gave out in the same way as Freeley's earlier in the week.

While the Scott Sociable kept going, it beat the sidecars of approximately equal capacity in a convincing manner, but it suffered much tyre trouble and a broken spring, and was unable to finish in time.

Very few of the 1,000 c.c. sidecar drivers treated the test otherwise than as a race. For seven laps, F. W. Giles (800 A.J.S. sc.) and L. F. McCardle (989 Harley-Davidson sc.) fought a ding-dong struggle for the lead. Giles lapped most consistently at 50 m.p.h., and later declared that he had not been all out but wished that he had. Plug trouble made McCardle's times vary, and eventually lost him several laps, but he claims to have completed his final circuit at 60 m.p.h. Strange noises came from O'Brien's Matchless, but at length they ceased, warmed-up oil probably finding its way into a starved bearing.

For the honour of the Ariel team L. F. Newey, at first very fast, carried on with a badly leaking petrol-tank, stopping every four laps for a fuel replenishment. After lying third to Giles and McCardle for some time, Wade on the second A.J.S. distorted a valve.

New Engine's Troubles.

Saddington, a late entrant on a James sidecar, who had started the trials with a brand new engine that simply would not climb hills, was still in trouble early in the speed test, losing nearly four laps on the majority. He retrieved himself by finishing in time, in great style.

The 678 c.c. Martinsydes, with the smallest engines in their class and the lowest top gears, did not disgrace themselves by any means; and the solitary Chater-Lea, although not fast, was very consistent. The two Indians were hampered by very heavy touring sidecars. The B.S.A.'s were not so silent as most of the big sidecars, but they certainly went well, and beat several 200 c.c.-larger outfits. Walker, however, broke a chain at the foot of the test hill, for which he was docked 11 marks.

Three-wheeler *versus* Sidecar.

Running in the same class, the Morgans lost a lap to Giles about half-distance, but were gaining ground again at the finish.

Although the final examination, conducted by Professor Low and Col. Davidson, was thorough, the number of marks lost at this point was surprisingly low.

Indeed, the feature of the whole trials, which, as it may be judged, were really severe, was the manner in which so many machines came through, ready, after only minor adjustments, to do it all over again.

HOW THE COMPETITORS FARED ON THE HILLS.

The Competitors Classified according to the Machines they rode. Their Awards and the hills on which they failed to make a clean ascent.

A.J.S.

Mrs. O. M. Knowles (349). *Gold medal.* Rosedale.
E. W. Choldcroft (349). *Gold medal.* Rosedale and Mow Cop.
H. F. Harris (349). *Gold medal.* Rosedale.
C. W. Hough (349). *Gold medal.* Candle Green.
F. W. Giles (800 sc.). *Gold medal.* Climbed all hills.
H. Poole (800 sc.). *Gold medal.* Boltby.
O. Wade (800 sc.). *Silver medal.* Climbed all hills.
H. H. S. Harris (800 sc.). *Retired.*

ARIEL.

A. Rollason (498). *Gold medal.* Climbed all hills.
F. A. Longman (498). *Gold medal.* Climbed all hills.
W. T. Woodcock (498). *Gold medal.* Climbed all hills.
L. Newey (994 sc.). *Gold medal.* Climbed all hills.
C. Bourlet (498 sc.). *Retired.* Boltby. Rosedale.
T. F. Blumfield (994 sc.). *Retired.*
F. J. Watson (994 sc.). *Retired.*
T. Peck (665). *Retired.*

ALLON.

L. E. Clulee (292). *Gold medal.* Climbed all hills.
R. Cooper (292). *Gold medal.* Rosedale.
W. Johnson (292). *Gold medal.* Boltby.

BEARMORE-PRECISION.

E. R. Jacobs (598 sc.). *Gold medal.* Boltby Rosedale.
J. M. Philpott (598). *Gold medal.* Rosedale.
H. Greaves (349). *Silver medal.* Whitehorse.

BROUGH-SUPERIOR.

Geo. Brough (976). *Gold medal.* Rosedale.
W. A. Fell Smith (976 sc.). *Retired.*

B.S.A.

B. L. Bird (770 sc.). *Gold medal.* Climbed all hills.
J. H. Walker (770 sc.). *Gold medal.* Rosedale.
H. S. Perrey (770 sc.). *Silver medal.* Rosedale.

BRADBURY.

W. E. Grange (750 sc.). *Retired.*
G. E. Minett (750 sc.). *Retired.*
P. Platt (750 sc.). *Retired.*

CHATER-LEA.

J. Chater Lea (976 sc.). *Gold medal.* Rosedale.

CLYNO.

F. Smith (926 sc.). *Gold medal.* Rosedale. Alms.

CONNAUGHT.

C. L. Sprosen (348). *Gold medal.* Gillamoor.
I. F. Anderson (292). *Certificate.* Boltby. Rosedale.
A. G. Wall (348). *Retired.* Long Hope.
I. P. Brettell (348 sc.). *Retired.*

COVENTRY EAGLE.

P. L. Mayo (249). *Gold medal.* Long Hope. Lydbrook.
Mrs. G. M. Janson (349). *Retired* at Brooklands. Rosedale. Wildboarclough. Long Hope.

COVENTRY VICTOR.

G. E. Austin (688). *Silver medal.* Boltby. Rosedale.

DOT.

H. Reed (986 sc.). *Retired.*

DOUGLAS.

J. A. Newman (494). *Gold medal.* Climbed all hills.
J. L. Hauman (494). *Retired.*
J. W. Wildblood (498 sc.). *Retired.*
R. C. Winn (494). *Retired.*

DUNELT.

P. Pehrson (499 sc.). *Gold medal.* Axe Edge. Allgreave. Candle Green.
O. S. Bridcutt (499). *Silver medal.* Climbed all hills.
B. H. Cathrick (499). *Retired* at Brooklands. Rosedale. Penrhied.

EXCELSIOR.

V. F. Strong (976 sc.). *Retired.*

F.N.

T. Buckle (748). *Retired at Brooklands.* Rosedale.

FRANCIS-BARNETT.

E. A. Barnett (346). *Gold medal.* Rosedale.
S. M. Greening (346). *Gold medal.* Long Hope.

GRINDLEY.

J. Graham Oates (248). *Retired at Brooklands.* Rosedale. Whitehorse. Llangynidr. Portway.

HARLEY-DAVIDSON.

W. D. Pugh (989). *Gold medal.* Rosedale.
L. F. McCardle (989 sc.). Not eligible for award. Centre Premiership only. Rosedale.
G. Baxter (989 sc.). *Gold medal.* Rosedale.
T. R. Allchin (989 sc.). *Gold medal.* Climbed all hills.
C. W. Johnston (989 sc.). *Gold medal.* Rosedale.

INDIAN.

E. A. Bridgman (998 sc.). *Gold medal.* Boltby. Rosedale.
R. Swanton (998 sc.). *Silver medal.* Whitehorse. Rosedale. Bwlch-y-Groes.
H. G. Catterall (596). *Silver medal.* Whitehorse. Boltby. Rosedale. Wildboarclough. Froghall.
D. H. Davidson (596). *Retired.* Boltby. Whitehorse.

JAMES.

G. Kimberley (349). *Gold medal.* Climbed all hills.

N. Hall (292). *Gold medal.* Climbed all hills.
W. Handley (292). *Gold medal.* Climbed all hills.

P. AND M.

P. Cunningham (555 sc.). *Gold medal.* Climbed all hills.
R. Lewis (555 sc.). *Gold medal.* Climbed all hills.
G. M. Townsend (555 sc.). *Gold medal.* Boltby.
J. A. Leyland (555). *Retired.*

Six Days Trials Described.—

POWELL.

J. Westwood Wills (547). *Gold medal.* Climbed all hills.

RADCO.

C. Lovegrove (247). *Gold medal.* Climbed all hills.

RALEIGH.

R. Evans (348). *Gold medal.* Rosedale.
C. F. Nott (348). *Gold medal.* Rosedale.
W. H. Hadfield (348). *Bronze medal.* Whitehorse.
E. Foster (698). *Retired.*
E. S. Burnett (698). *Retired.*

ROYAL RUBY.

C. J. P. Dodson (349). *Retired.*
P. N. Hills (349). *Certificate.* Bolthy. Rosedale. Mow Cop. Bwlch-y-Groes.

RUDGE.

A. W. Handley (499 sc.). *Retired.*
W. J. Danskin (499 sc.). *Retired.*
F. T. Sibley (499 sc.). *Retired.*
E. J. Kehoe (998). *Retired.*
W. L. Gard (499). *Retired.*
F. S. Whitfield (499). *Retired.*

SCOTT.

G. Hill (532). *Gold medal.* Climbed all hills.
W. Moore (532). *Gold medal.* Climbed all hills.
W. Scott (532). *Silver medal.* Climbed all hills.

SCOTT-SOCIABLE.

D. Rhodes (578). *Certificate.* Bolthy. Rosedale. Mow Cop.

SHEFFIELD-HENDERSON.

E Searle (350). *Gold medal.* Climbed all hills.

SUN-VITESSE.

J. Johnson (247). *Gold medal.* Rosedale.
M. Bishop (247). *Gold medal.* Climbed all hills.
F. Parkes (247). *Certificate.* Hirnant.

SUNBEAM.

G. Dance (499). *Gold medal.* Climbed all hills.
A. Bennett (499). *Gold medal.* Rosedale.
C. Greenwood (499). *Gold medal.* Climbed all hills.
H. M. Beedon (499). *Gold medal.* Rosedale. Alms.
T. C. de la Hay (555 sc.). *Gold medal.* Bolthy. Rosedale.
P W. Bischoff (555 sc.). *Gold medal.* Bolthy. Rosedale.
R. Brown (555 sc.). *Gold medal.* Rosedale.
J. H. Davies (492). *Gold medal.* Climbed all hills.

T.B.

F. S. Spouse (980). *Gold medal.* Climbed all hills.

TRIUMPH.

W. N. C. Phillips (499). *Gold medal.* Rosedale. Whitehorse.
A. A. Verity (499). *Gold medal.* Long Hope.
J. Harrison Watson (550 sc.). *Retired.*

WEATHERELL.

M. C. Breese (349 sc.). *Retired.*

WILKIN.

W. H. Hardman (499). *Retired.*

ZENITH-J.A.P.

S. E. Longman (349). *Silver medal.* Climbed all hills.
C. H. Mocatta (349). *Retired.*
R. H. Bywaters (986 sc.). *Retired.*
R. C. Charlesworth (986 sc.). *Retired.*

CAUSES OF RETIREMENTS.

MONDAY.

H. Reed (986 Dot sc.)—gear box.
V. F. Long (976 Excelsior sc.)—unknown.
H. H. S. Harris (800 A.J.S. sc.)—carburetter and burnt clutch.
R. C. Winn (494 Douglas)—transmission sprocket sheared.
T. F. Blumfield (994 Ariel sc.)—primary chain trouble.
G. E. Minnett (750 Bradbury sc.)—gear box.
F. J. Watson (994 Ariel sc.)—unknown.
P. Platt (750 Bradbury sc.)—magneto.
C. H. Mocatta (349 Zenith)—rear hub bearing.
R. H. Bywaters (986 Zenith sc.)—unknown.
R. C. Charlesworth (986 Zenith sc.)—gear box.
G. W. Shepherd (998 L.S.D.)—unknown.

TUESDAY.

A. Lea (496 Lea-Francis)—broken frame.
C. Bourlet (498 Ariel sc.)—clutch trouble.
W. N. Clayton Russell (633 Norton sc.)—accident.
E. J. Kehoe (998 Rudge)—broken frame.
W. A. Fell-Smith (976 Brough Superior sc.)—broken sidecar connection.
M. C. Breese (349 Weatherell sc.)—broken frame.
I. P. Brettell (348 Connaught sc.)—accident.
H. G. Catterall (596 Indian Scout)—carburetter.

WEDNESDAY.

J. L. Hanman (494 Douglas)—gear box.
W. H. Hardman (499 Wilkin)—accident.
F. B. Freeley (595 New Hudson sc.)—gear box.
W. J. Danskin (499 Rudge sc.)—broken valves.
J. Harrison-Watson (550 Triumph sc.)—tyres.
W. E. Grange (750 Bradbury sc.)—unknown.

THURSDAY.

R. M. Knowles (490 Norton)—gear box.
W. L. Gard (499 Rudge)—engine trouble.
J. A. Leyland (555 P. and M.)—unknown.
J. W. Wildblood (494 Douglas sc.)—sprocket key sheared.
F. T. Sibley (499 Rudge sc.)—broken sidecar chassis.

FRIDAY.

A. G. Wall (348 Connaught)—unknown.
E. Foster (698 Raleigh)—unknown.
E. S. Burnett (698 Raleigh)—tyres.
C. J. P. Dodson (349 Royal Ruby)—accident.

SATURDAY.

J. Graham Oates (248 Grindley)—valves.
F. S. Whitfield (499 Rudge)—valves.
T. Buckle (784 F.N.)—accident (tyre).
B. H. Cathrick (499 Dunelt)—accident (tyre).
Mrs. Janson (349 Coventry-Eagle)—engine and magneto.
B. Bourke (595 New Hudson sc.)—gear box.

COMPLETE TABULATED RESULTS.

Competitors' Marks (lost and gained) on Various Tests. 79 Gold Medals, 9 Silver Medals, 3 Bronze Medals, 7 Certificates. 1 Not Eligible for Award, Centre Premiership Competition Only. 43 Retired.

SPECIAL PRIZES.

TEAM PRIZES: Class A. 1; Levis, total marks 1,450 (riders: G. S. Davidson, A. R. Edwards and F. W. Applebee). 2; New Imperial, 1,447 (riders: B. Kershaw, L. Horton and J. Wilkins). 3; Sun-Vitesse, 1,416 (riders: J. Johnson, F. Parkes and M. Bishop).

Class B. 1; O.K.-Junior, 1,447 (riders: F. C. North, N. Hall and W. Handley). 2; A.J.S., 1,445 (riders: E. W. Choldcroft, H. F. Harris and C. W. Hough). 3; Allon, 1,417 (riders: R. Cooper, L. E. Clulee and W. Johnson).

Class C. 1; Sunbeam, 1,458 (riders: G. Dance, A. Bennett and C. Greenwood). 2; Ariel, 1,454 (riders: A. Rollason, F. A. Longman and W. T. Woodcock).

Class F. 1; P. and M., 1,443 (riders: P. Cunningham, R. Lewis and G. M. Townsend). 2; Sunbeam, 1,419 (riders: T. C. de la Hay, P. W. Bischoff and R. Brown).

Class G. Harley-Davidson and A.J.S. tied, 1,443 marks (Harley-Davidson riders: G. Baxter, T. R. Allchin, C. W. Johnston). (A.J.S. riders: F. W. Giles, H. Poole and O. Wade).

CENTRE PREMIERSHIP: F. W. Giles (A.J.S. sc.), Midland Centre, 494 marks.

HOPWOOD PRIZE for Best Performance in the Trial: 1; F. W. Giles (A.J.S. sc.), 494. 2; W. Carr (Morgan), 493. 3; H. F. S. (Morgan), 492.

Competitor and Machine.	Speed on Brooklands. m.p.h.	MARKS LOST (Bonus Marks shown thus "+5."). On time.	On hills.	Brakes.	Silence.	Speed test.	Condition.	Total.	Award.

The feat of Mrs. Knowles in winning a Scottish and an English "gold" in one year is an unparalleled achievement for a woman, and one equalled by very few men. She is a genuine private owner, and is all the more pleased because she did *not* have an absolutely no-trouble run.

* * * *

The rear band brake of Graham Oates' Grindley gave a lot of trouble, and in consequence the Grindleys of the future will be fitted with the dummy belt rim type. Incidentally 28×3 in. tyres were used on this lightweight after prolonged tests, which proved they did not slow the machine one whit.

* * * *

The Auto-Cycle Union wishes to contradict the impression wrongly gained by a few of the competitors that charges for hotel accommodation included a certain percentage to be devoted to the expenses of the trials. On the contrary, these charges did not even include the cost of preparing and printing the books of coupons, or the expenses incurred in arranging accommodation for some two hundred and fifty individuals. These, obviously, were covered by the entry fees received. Possibly the error arose owing to the fact that at one headquarters no advance prices could be obtained, and therefore an average was struck with the definite object of adjustment at the conclusion of the trial.

THE RESULTS ANALYSED.

Class.	Gold.	Silver.	Bronze.	Certificate.	Non-starter.	Retired.

* One not eligible for award (centre competition only).

CENTRE PREMIERSHIP.

	Marks.
1. F. W. Giles (A.J.S. sc.), Midland	494
2. J. H. Davies (Sunbeam) N. Wales	491
3. J. A. Newman (Douglas), Western	489
4. F. J. Ellis (Matchless sc.), S. Eastern	481
5. L. F. McCardle (Harley-D. sc.), Eastern	472
6. H. H. Saddington (James sc.), S. Midland	444

* * * *

When G. Brough was forced to retire, he wired for J. A. Watson-Bourne, who is now partner in a garage business at Oldham. The latter set out at 1 a.m. on his Brough Superior outfit, reached Llandrindod Wells at 7.30 a.m., and started off with the competitors at 8.26 a.m. Incidentally, he always shone on hills, often climbing second and low-gear pimples—for others—on a top of 3.5 to 1.

Barnett's and Greening's Francis-Barnetts—the only two in the trial—ran most consistently throughout the event, but the former lost 2 marks in the final examination owing to neglecting to tighten his rear cone after a hurried tyre change, under official supervision, the night before.

* * * *

On Monday Percy Mayo (Coventry Eagle), Bert Kershaw (New Imperial), and some others, riding together, miscalculated a 15 m.p.h. section and were caught early at the secret check.

* * * *

Hadfield (Raleigh) lost marks on Monday owing to a new engine seizing; all the rest of the week he retained a clean sheet.

* * * *

The old McKechnie spring frame machine in the hands of F. W. Becker made some surprisingly good ascents of difficult hills. Becker is not an old hand at trials riding, and the manner in which he kept upright on freak surfaces augured well for the general stability of the design.

* * * *

Last week we stated that Bridcutt and Cathrick, the Dunelt riders, "got mixed up" on Rosedale. They did; but it turns out that the former made a clean ascent.

* * * *

The four three-wheelers to finish—five started—have a better record than the survivors in any other class.

CURRENT CHAT (continued from p. 305).

The Scott Trial.

Invitations to compete in the Scott Trial on September 16th are now being issued, and any prospective competitor who has not received one should write at once to the Scott Motor Cycle Co., Ltd., Saltaire, Shipley, Yorks.

The Kingston Police.

In spite of the condemnations of some of our correspondents, a Midland rider who passed through Kingston recently, reports the behaviour of the local police to be above any criticism; their excellent traffic control at two difficult junctions was greatly appreciated.

Sidecars Records Jump.

On the 17th inst. V. E. Horsman (596 Norton sc.) broke the following kilometre and mile records:

FLYING MILE: 48.07s.=74.89 m.p.h.=120.53 km.p.h.
INTERNATIONAL MILE: 49.22s.=73.14 m.p.h.=117.72 km.p.h.
INTERNATIONAL KILO: 30.39s.=73.61 m.p.h.=118.46 km.p.h.

A S'olen Mount.

Last week a sidecar outfit which was being tested by a member of the staff of our contemporary, *The Motor Cycle and Cycle Trader*, was stolen in Birmingham. The machine was a 749 c.c. James outfit, with spare wheel, sidecar screen and Magdyno; frame number 1858, registered OH 8799.

The French Salon.

This year the French Show will be held from October 4th to 15th. It will consist of two separate exhibitions. Most of the exhibitors will be housed in the Grand Palais, but motor cycles, sidecars, and cycle cars, and certain accessories, will be found in the huts of the Paris Fair on the Esplanade des Invalides and on the Cours-la-Reine.

North-Western Centre A.C.U.

Owing to the Chief Constable being unable to provide sufficient police control, due to other ceremonies occurring on the same date, the open hill-climb, formerly arranged to take place at Garstang on September 9th, has been postponed. It is hoped to be able to hold the event on October 28th, but further particulars will be announced later.

Popular Scottish Event.

Organised by the Edinburgh and District M.C., the Scottish Two Days' Trial will take place this year on September 16th-18th, over a course of approximately 190 miles. Sheriffmuir, Rinloon, Cockbridge, Bridge of Brown, Inverfarigaig Corkscrew, and Kenmore are all included as non-stop hills. Further particulars are available from Mr. Campbell McGregor, at 6, Castle Terrace, Edinburgh.

An Extraordinary Accident.

On the London road near Crayford, Kent, a broken overhead tramway wire became entangled in a motor bicycle and sidecar. There was a shower of sparks and the driver was warned not to move as the wire was "live." His wife and child were in the sidecar, but the insulation afforded by the tyres saved them from shock, but they had to remain stationary until officials wearing rubber gloves removed the wire.

An Inter-Works Team Trial.

To be allowed to set your own schedule over a 25-mile lap and then to complete two more laps without deviation sounds easy, but try it! This was the problem set by the Coventry and District Works Motor Association to the various teams representing Coventry works in an event held on Saturday last. Each lap included a short colonial section and an ascent of Sunrising Hill. Some sixty competitors started and a few first-class performances were registered, though there were a number of failures on Sunrising. It must be understood that the competing machines were the property of the owners, and though a number of up-to-date models were to be seen, in some cases they were of considerable antiquity. The results of the competition are not yet to hand.

CLUB NEWS (continued from p. 306)

Levis A.C.

The Yardley Cup and other prizes will be competed for on the occasion of the third annual reliability trial which has been arranged to take place on September 30th. The event is confined exclusively to single-geared belt-driven machines.

Slough and District M.C. and L.C.C.

Saturday, October 7th, has been selected for holding the first annual reliability trial for the Harris challenge cup and medals. The first man will leave the Crown Hotel, Slough, at 4 p.m., and the course will be about 80 miles in length. All particulars of this and other events may be obtained from Capt. H. W. H. Dyke, of "Hartford," Upton Road, Slough.

Westmorland M.C.C.

Brilliant weather and good sport characterised the gymkhana held at Sandside (Morecambe Bay) on the 20th inst. The occasion also served as a rally for the Northern Centre A.C.U., and there was a large attendance of motorists from all parts of the district. The results of the events were as follows:—

Potato Race: (1) G. Hodgson (490 Norton); (2) M. Sedgwick (499 Sunbeam).
Threading the Needle: (1) R. McKenzie (654 Rover); (2) P. Fawcett (499 Sunbeam).
Plank Race: (1) G. Atkinson (249 Velocette); (2) P. Fawcett (499 Sunbeam).
Looping the Loop: (1) T. Chaplow (498 Ariel); (2) G. Atkinson (249 Velocette).
Obstacle Race: (1) B. Turner (249 Velocette); (2) G. Parkinson (293 New Imperial).
Tilting the Ring: (1) T. Chaplow (498 Ariel); (2) R. McKenzie (654 Rover).
V.C. Race: (1) B. Turner (249 Velocette); (2) T. Chaplow (498 Ariel).
See-saw Race: (1) T. Chaplow (498 Ariel); (2) R. McKenzie (654 Rover).
Blindfold Race: (1) T. Chaplow (498 Ariel); (2) G. Roberts (492 Sunbeam).
Two-wheel Sidecar Race: (1) G. Hodgson (490 Norton sc.); (2) T. Chaplow (498 Ariel sc.).

The star event of the day was the race for two-wheel sidecars, Hodgson (490 Norton sc.) putting up a very praiseworthy performance. Lifting his sidecar for a distance of a hundred yards, he passed the finishing post at 30 m.p.h. amidst the plaudits of hundreds of spectators. The prizes were afterwards distributed by Mrs. R. M. Chaplow, whose husband, together with Mr. W. Houghton, were the donors of the prizes. Mr. Arthur Moffatt acted as starter.

Week-End Club Events.

Sept. 2nd.—Cheshire Centre A.C.U.—Open One Day Reliability Trial.
Sept. 2nd.—South Eastern Centre A.C.U. (Surbiton M.C.).—Brooklands Race Meeting.
Sept. 2nd.—Worcestershire M.C. — Madresfield Court.
Sept. 2nd.—Atherton and District M.C.C.—Run to Turvin.
Sept. 2nd.—Mid Bucks M.C.C.—Petrol Consumption Test.
Sept. 2nd.—Wolverhampton M.C.C.—Competition for Eric Williams Challenge Shield.
Sept. 2nd.—Coventry and Warwickshire M.C.—Closed Speed Trial.
Sept. 2nd.—Coatbridge, Airdrie and District M.C.C.C.—Social Run to Tillitudlem.
Sept. 2nd.—Dumfries and District M.C. and C.C.—Gymkhana.
Sept. 2nd.—Eastbourne and District M.C.C.—Surbiton and District M.C.C., Speed Trials.
Sept. 2nd.—West Kent M.C.—S.E. Centre Speed Trials, Brooklands.
Sept. 2nd.—Coventry Triangle M.C.—Paper Chase.
Sept. 3rd.—Coventry Triangle M.C.—Run to Wrekin.
Sept. 3rd.—Colne and District M.C.—Run to Hopper Lane.
Sept. 3rd.—Bridgnorth and District M.C.C.—Captain's Run.
Sept. 3rd.—Halifax and District M.C. and L.C.C.—Run to Higher Hodder.
Sept. 3rd.—Barrow and District M.C.—Northern Centre A.C.U. Rally, Keswick.
Sept. 3rd.—Middlesbrough and District M.C.—Knock-out Competition.
Sept. 3rd.—Sheffield M.C.C.—Run to Edwinstone, Dukeries.
Sept. 3rd.—Leeds Motor Union.—Run to Ramsgill and Middlesmoor.
Sept. 3rd.—York and District M.C.—Mr. E. Wasling's Run.
Sept. 6th.—York and District M.C.—Novices' Trial.
Sept. 6th.—Leeds Motor Union.—Impromptu Run from City Square.
Sept. 6th.—Exeter M.C. and J.C.C.—Evening Run to Dawlish Warren.
Sept. 7th.—Oxford M.C.—Gymkhana.

Clitheroe and District M.C.

J. Todd (211 New Hudson) was the first "hound" to catch the "hare," J. Whittaker (584 Harley-Davidson), in a successful paper-chase held on Wednesday of last week over a varied course of approximately 30 miles.

Southport M.C.

Fine weather conditions favoured the race meeting held on the Sands on the 19th inst. W. Johnson, jun. (499 Sunbeam), secured two firsts and one second, showing considerable skill. In the sidecar classes F. Bullough (490 Norton sc.) took five firsts in six events.

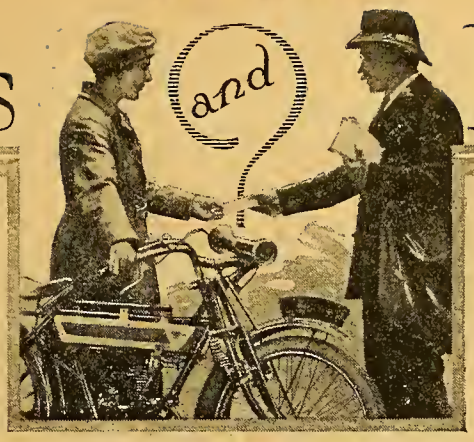
Rotherham and District M.C.

Eighty miles had to be covered in the course of the annual reliability trial which took place on August 20th. The prize-winners in this event were:—

(1) D. Lister (349 Excelsior-Blackburne).
(2) C. Watt (498 Ariel).
(3) L. Thrall (348 Douglas).

The late Mr. Robert Head, Chairman of the Motor Cycling Club, who died at Teignmouth last week. By his decease the M.C.C. will suffer an irreparable loss.

Questions and Replies



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not, **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

WORN CYLINDER.

I have a 1918 Allon two-stroke and in my work run about 700-1,000 miles per month. Of late the piston is extremely difficult to get out of the cylinder. In fact, I have to wrench it out forcibly. It burns in the rings after about 300 miles and needs taking down. (I decarbonise every 500.) The machine is slow and rattles badly immediately it reaches 23 m.p.h. I presume the cylinder is worn in the bore and is still the original calibre in the neck. Is it a satisfactory job to have a two-stroke rebored and new piston fitted?—C.J.

It will be best to return the cylinder and piston to the makers, as they might be able to rebore it for you and fit a new piston; in all probability, however, they would recommend the fitting of new parts, as it seems to be badly worn.

TAXATION.

As it is nearly two years now since I rode a motor cycle will you tell me what would be the tax on a machine of about 2¾ h.p. and whether one has to have a licence as well? To the best of my recollection it was about 25s. for a licence two years ago. The registration fee, I presume, is only a small amount.—T.S.M.F.

Motor cycles are now taxed on weight, machines under 20 lb. being 30s. annually; over 200 lb. 60s. Quarterly licences can be obtained. The taxation fee includes registration of the machine, and a driving licence costs 5s. The description of machines by arbitrary "horse powers" is falling into disuse since the initiation by *The Motor Cycle* of the system of rating by capacity only, e.g.: 349 c.c. A.J.S., 269 c.c. Villiers, etc.

SKID ON WET TAR.

I was riding recently in a district where the council was tarring the roads. The tar machine was drawn by a tractor, and being on the bend of a decline it obscured my view of oncoming traffic. No signals or notices were exhibited, and as I drew near I observed that the tractor had stopped and only left sufficient room for one vehicle to pass, and consequently a motor car came through which placed me with the alternative of either running on the newly laid tar or being run into. The former was done, causing a skid, with slight personal injuries and damage to clothes, machine, etc. What course do you suggest to be taken in the matter? Is the council liable for not exhibiting warning notices?—P.M.

You do not make it clear whether the position of the tar-spraying machine compelled you to use the "wrong" side of the road. This would have some bearing on the matter, but it is possible that you may be able to obtain compensation under the circumstances which you describe, as there appears to have been some negligence on the part of the highway authority in not showing warning signs. Your best plan is to take legal advice locally.

LAMP ON SIDECAR.

The other evening I was stopped by a policeman for not having a sidecar light on my Douglas outfit. Does the law enforce a light on the sidecar when the latter is attached on the near side?—H.C.

A lamp must be carried on the near side of the sidecar in addition to the head lamp on the motor cycle, in order to show the full width of the outfit.

WORN BEARINGS.

(1) When warm, the engine of my 486 c.c. single-cylinder sidecar develops a rattle which usually disappears on breasting a rise, but reappears again when the slope eases. It amounts to a slight metallic purr, which becomes intensified when speed on the level is increased. My mileage is about 2,500. (2) What accounts for black smoke being emitted from exhaust pipe when engine is being started up?—J.E.W.

(1) A mechanical rattle which is more noticeable when the engine is running light than at other times is usually associated with a worn big-end bearing, and it would be advisable to remove the cylinder and test whether there is excessive play in either of the connecting rod bushes. If the trouble is not due to play in these parts, it may arise from wear in the timing gear, although this is not likely if the machine has only done 2,500 miles. (2) Black smoke coming from the exhaust pipe indicates that the mixture is far too rich; either the carburetter is flooding excessively or the jet is too big.

TO IMPROVE TOP GEAR PULLING.

I have a 349 c.c. Blackburne-engined motor cycle geared 4¼ to 1 on top. I find the machine will not pull very well against a head wind, and propose to alter the gear to about 5½ to 1. The present engine sprocket has 20 teeth. What number would be required on a new sprocket, to make this alteration, and where could I obtain a sprocket?—W.H.

A 16T sprocket on the engine shaft will give you a gear ratio of approximately 5¼ to 1, which should be satisfactory. Possibly the engine makers will supply you with a suitable one.

REMOVING B.S.A. BELT RIM.

Having split the belt rim of my 557 c.c. 1919 B.S.A., I shall be glad of your help *re* the following questions: (1) How is the belt wheel fixed? (2) Which is the best way to get it off? (3) Is it possible to fix a new rim to the old belt wheel? (4) If the answer to question No. 3 is in the affirmative, where can I obtain the belt rim?—H.D.

(1) The belt wheel is screwed on to the hub with a left-hand thread and secured by a right-hand lock ring. (2) It requires a considerable amount of power to get it off, and it may be necessary to heat the hub centre with a blow-lamp; probably your best plan is to return the wheel to the makers. (3) and (4) The makers would no doubt repair the belt rim; we do not think that you could do it yourself.

Important Dates.

Sat., Sept. 2nd.—Cheshire Centre A.C.U. Open Reliability Trial.

Fri., Sept. 15th, to Mon., Sept. 18th—Anglo-Dutch Trial in Holland.

Sat. Sept. 16th—The Scott Trial.

Sat., Sept. 23rd—500 Mile Race at Brooklands.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd.—Olympia Motor Cycle Show.

READERS' REPLIES.

FROM NEUTRAL TO LOW.

With reference to "G.A.C.'s" inquiry concerning Indian clutch adjustment, I should recommend him to examine the thrust rod, which passes right through the Indian gear box, for wear, and to adjust accordingly. When this rod wears the operating arm will travel through the first portion of its arc before commencing to disengage the plates. I have been able to cure similar faults to those described in this way.—W. W. W.

A TWO-STROKE RATTLE.

Last month my own two-stroke was overhauled by the makers and was fitted with a new cylinder, new connecting rod, gudgeon-pin, crankpin and rollers, crank case bushes and piston rings, the original piston being retained, and right from the first time I tried it, since when I have done about 200 miles, an appalling rattle has issued from the cylinder at speeds over 10 miles an hour, and which I cannot control by any means.

It could hardly be wear in such a short time, especially as I give it plenty of oil, and also the fact that the rattle was audible as much during the first mile as it is now after 200 miles, rules out that as the reason.

If the flywheel is gently rocked there is a faint clicking which I have traced to the new piston rings being somewhat narrower than the grooves, and consequently coming into contact with the top and bottom of the groove as the piston goes up and down; this, however, I think is nothing to do with the rattle, as it is only noticeable when the flywheel is turned slowly backwards and forwards, and disappears if the engine is turned over quickly; also the offending noise is much deeper in tone than the click of the rings. J. I. H.

SCOTT CHAIN ADJUSTMENT.

"F.P.M." should change his chains over. The present low gear chain should be shortened to fit the high gear and the high gear chain lengthened with the piece cut off the low gear chain, when this will be found to fit. If he has the correct number of links in each chain he will find that his trouble has vanished. If his machine is a 532 c.c. standard the high gear chain should have 66 links and the low gear 77 links. W. O. J.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"W. A. L." (Liverpool). — Scott Sociable: speed, power on hills, interchangeable wheels.

"N. O'N." (Richmond).—Johnson's Carbon Remover.

"R. P." (Bristol).—557 c.c. B.S.A. sidecar ("sports" model): suitable top gear ratio, prevention of oil leakage around tappets.

"J. S. P." (Thornton).—Hopley and Paragon folding sidecars.

"J. R. A." (Burton).—499 c.c. Rudge-Multi: suitable "sports" sidecar and general running with same.

"W. K." (Redruth).—550 c.c. Hawker-Blackburne: fuel consumption, reliability for solo and sidecar work in Cornwall.

"C. M. P." (Liverpool).—225 c.c. Royal Enfield with sidecar.

"S. J. W." (Bodmin).—349 c.c. Coulson-Blackburne, 2-speed "sports" model: reliability, speed and upkeep.

"D. G. H." (Southsea).—Jackson's Impervo.

"S. C. D." (Cirencester).—398 c.c. A.B.C. sidecar: speed, hill-climbing, and springing.

"P. M." (Portland).—499 c.c. Dunelt sidecar: carburetter fitted, fuel consumption, general running.

"G. J." (Taunton).—490 c.c. Norton, 654 c.c. Quadrant, 650 c.c. Excelsior, and 557 c.c. B.S.A., all with sidecars: speed and reliability.

"A. S. P." (Richmond).—One arm (right). Suitable machine; mechanical adjustments necessary.

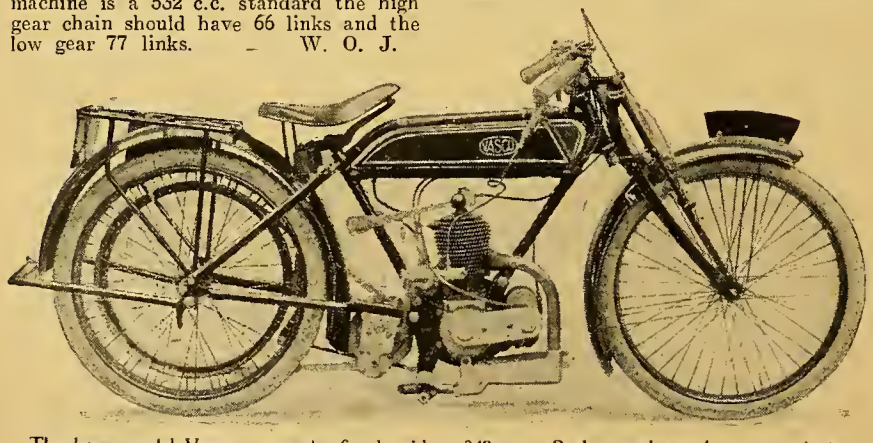
"A. J. C." (Frome).—398 c.c. A.B.C.: hints on tuning.

"W. T." (London).—164 c.c. Economic.

"F. S." (Malvern).—398 c.c. Raleigh: reliability, speed.

"M. S." (Northumberland).—596 c.c. Indian Scout

"X. Y. Z." (Glasgow).—498 c.c. Zenith Bradshaw.



The latest model Vasco two-stroke fitted with a 349 c.c. Broler engine. A commendable feature of this neatly designed machine is the large and effective aluminium silencer Prices range from £45 to £60. The Vasco is produced by Vasco Motors, 136, London Road, Kingston-on-Thames.

SPARKLETS

Low Priced Big Twin.

The price of the American "X" motor cycle has now been reduced to £105, including the usual equipment.

Super-lubrication.

As many as 125 of the 142 starters in the A.C.U. Six Days Trials used Miracle oil for their engines.

Change of Address.

The Cleveland Motor Cycle Manufacturing Co., Ltd., has changed its quarters to Premier House, 150, Southampton Row, London, W.C.1.

Chassis-less Sidecars.

Described in our pages nearly two years ago, the Millford-Rock spring sidecar, which has been described as a chassis-less model, is now being placed in production.

Guarding Against Punctures.

Tyre trouble is always annoying, but at times it is fatal. To guard against it, over 75 per cent. of the competitors in the "Six Days" took the precaution of injecting Jackson's Impervo into their tubes as a preventive measure.

An Injunction.

An injunction has been obtained by C. A. Vandervell and Co., Ltd., against the Safix Marine Engineering Co., Ltd., and a Mr. Burdon, who are restrained thereby from selling partly rebuilt surplus W.D. starter magnetos as genuine new C.A.V. magnetos.

Found on the Road.

By Mr. M. W. Bingham, 35, Coniston Road, Muswell Hill, N.10, a tool kit and gin. Coventry chain, on the London-Worthing road, two miles north of Horsham, on August 13th.

By G. Peff, "Rosemary," Chase Court Gardens, Enfield, a camera, on the Winchester-Bournemouth road.

Useful Preparation.

We have lately received a sample of 3-In-One oil, which is ideal for the lubrication of magnetos and small tools, such as drills. It prevents rust, can be used as car polish for polishing up sidecar bodies, and can be mixed with metal polish to prevent tarnishing. It is sold in one, three, and eight-ounce bottles by John G. Rollins and Sons, 27, Stonecutter Street, London, E.C.4, at 9d., 1s. 6d., and 3s. respectively.

Catalogues Received.

The British Timken Co., Ltd., Ward End, Birmingham: A booklet giving useful information regarding Timken roller bearings.

James Grose, Ltd., 4, Old Jewry, Cheapside, London, E.C.—A complete catalogue and price list containing a large number of illustrations of motor accessories of every description.

Vickers Steels

Copy of letter from:—
Messrs. Sunbeam Motors, Ltd., Moorfield Works, Wolverhampton.

14th July, 1922.

In reply to your letter of the 13th inst. re T.T. Race in the Isle of Man, the frames of the Sunbeam Car which won this race were supplied by Vickers last year in 3% Nickel Steel.

Yours faithfully,

REGISTERED TRADE MARK

FURTHER PROOF

of the reliability and efficiency of **VICKERS STEELS.**

ON June 22nd, 1922, the Sunbeam and Talbot Darracq racing cars won the two Tourist Trophy Races in the Isle of Man.

All forgings for both these cars were made by VICKERS LIMITED from VICKERS STEEL.

Some PREVIOUS PROOFS:—

VICKERS — Crankshafts, Propeller Shafts and other forgings in Rolls-Royce engines made the first aeroplane flight across the Atlantic.

VICKERS — Crankshafts, Propeller Shafts and other forgings in Rolls-Royce engines made the first aeroplane flight from England to Australia.

VICKERS — Crankshafts, Propeller Shafts and all other forgings in Sunbeam engines made the first Airship flight across the Atlantic in R.34.

VICKERS — Forgings were used exclusively in the Sunbeam car driven by Mr. Kenelm Lee Guinness, which on May 27th, 1922, at Brooklands, made the remarkable speed of 137 miles per hour, being the greatest speed ever recorded by a car.

VICKERS STEELS are used by the Leading motor car and aeroplane engine manufacturers.

VICKERS LIMITED,
River Don Works, SHEFFIELD.
Head Office: **VICKERS HOUSE, BROADWAY, LONDON, S.W.1.**

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, ½%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

WHAT twenty-five pounds off current list prices has given rise to wild rumours. Some say "It can't st"; others say "Impossible"; a few prophets aisper "Bankruptcy"; but the knowing ones send ong their deposits and get the goods. We positively aim to have embodied in the new De Luxe Barr and roud the finest components available, and we are ot alone in describing it as the finest machine in e world at anything within £20 of its present price. ne testimonial to-day reads:—"You may be certain my hearty recommendation; the value is extraordinary." We know it, the trade know it, and the ublic are learning it. Think this over. The average lo 4h.p. does about 94 to the gallon. A regular der uses approximately eight gallons weekly. Now e guarantee 140 miles per gallon on the sleeve-valved gine, and can exceed 4h.p. easily anywhere, any me. Now, reckoning petrol at its present figure, a ugh computation shows an annual saving of £17 on e petrol bill alone. It doesn't require a mathetician to tell the sensible man that within four ars the economical running of his Barr and Stroud as saved the initial cost of the entire machine. ith a sidecar fitted we can astound you. We can imb 1 in 3 on second gear, 20 stone up, do 40 without effort for long periods, and yet crawl along at alking pace if necessary. We are receiving astounding testimonials, and can substantiate every one. end per return four stamps for art illustration easuring 13in. by 10in., a 32-page catalogue, and rochures of riders' opinions and recent successes. Instration of our super-model D will be sent post ee on request. Messrs. Whiteley and Rideezi Sales, td., London, can supply for cash or terms. We upply four models from £56, and we challenge the orld on price and quality. Remember there is no ner all-round machine in the whole world than the w famous De Luxe Barr and Stroud.—191, Sweetman ., Wolverhampton, and 174, Corporation St., Birmingham. [8406

Dene.

DENE 1920, 8h.p. J.A.P. engine, complete with coach-built sidecar, equipment includes lamps, horn, peedometer, and screen, total mileage 2,000; sacrifice at 65.—The Layton Garages, 30, Holywell St., Oxford. [8905

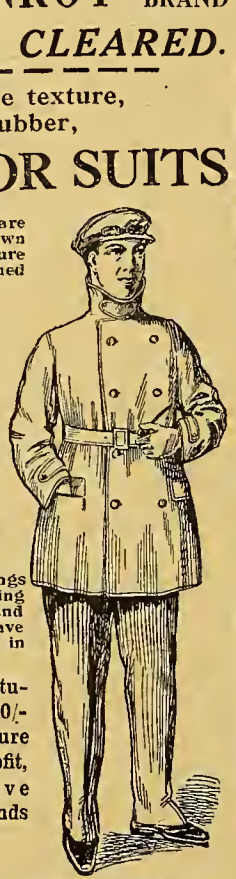
MANUFACTURERS' STOCK
MAKINKOT BRAND
TO BE CLEARED.

Fawn double texture, interlined rubber,

MOTOR SUITS



THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

A REAL RUBBER NON-SKID

33⅓ % MORE MILEAGE

ELITE COVERS ECLIPSE ALL OTHERS.

ELITE COVERS ECLIPSE ALL OTHERS.

Special Offer 25% DISCOUNT.

To introduce this cover we are prepared to allow the above special discount off the first 1,000 sold. Guaranteed to give you at least 33⅓ per cent. more mileage than you have obtained from any other make; these covers embody all the true principles that go to make a non-skid—Side Ribs, Cross Bars and Suction Cups—a combination of everything that is best in tyre manufacture. Order one now.

WE DO NOT WANT YOUR MONEY.

To prove to you the excellent value of these covers, we are prepared to pay the carriage both ways in the event of same not being to your absolute satisfaction, and, if you consider it necessary, you may deposit your money with the publishers of this journal under their deposit system.

ELITE SUPER NON-SKID EXTRA HEAVY MOTOR CYCLE COVER.

WHY WORRY ABOUT WET WEATHER ?

Here is your Safeguard—

MOTOR CYCLE SUIT

With Plaited Leather Belt.

GUARANTEED WATERPROOF

SPECIFICATION

MADE from hard-wearing double textura material with an interlining of Rubber. Double Breasted Jacket, with all-round Belt and Leather Buckle, large Patch Pockets, and con- verted collar to button right up to neck, to fasten with Throat Tab. Wind Cuffs in sleeves. All seams of the Suit are rubber cemented and taped with extra material, making the garment absolutely waterproof. Overall Trousers with spat - shaped fag; wind gussets to keep the wind from the leg and boots; fastened with patent clasp fasteners, enabling the trousers to be pulled off in a moment. The suits are newly manufactured, and every care is taken with details so that the garment will meet the severest test. We give full guarantee that this suit is thoroughly waterproof, and impervious to the most drenching & continuous downpour.

THESE SUITS ARE NEWLY MADE FROM FRESHLY PROOFED MATERIAL BY EXPERIENCED WORKMEN, AND NOT HALF PERISHED CLEARANCE LINES OR W.D. SURPLUS.

PRICE **35/-** NO EXTRA CHARGE FOR CARRIAGE.

State chest measurement and height when ordering.

SUIT WITH SEATLESS TROUSERS (as above)	42/-
JACKET ONLY	25/-
SEATLESS TROUSERS ONLY	18/-
OVERALLS ONLY	12/6

Our Illustrated List and Pattern bunch of cloths; together with self-measurement form, will be sent on to you post free, and without any obligation, upon receipt of your NAME and ADDRESS.

MONEY REFUNDED IN FULL IF NOT PERFECTLY SATISFIED & GARMENTS RETURNED TO US IN 7 DAYS.

NOTE

SIZES 34", 36", 38", 40", 42"-44" in stock. Special sizes can be made in 5 DAYS, and no extra charge made if you decide to avail yourself of this opportunity. Send your measurements to-day. We guarantee a perfect fit in every way.

We are the actual Manufacturers:—

ALEXANDER'S

ANNUAL CLEARANCE

OF

Brand New, Shop-soiled and Second-hand

MOTOR CYCLES

NOW BEGINS.

This is an event looked forward to by the keen cash buyers, and it will pay you to send for our list now. Having a stock of over 400 brand new machines, there are naturally many which have been in stock for some time which are slightly shop-soiled.

Our Agencies are: Douglas, Enfield, Norton, Matchless, Indian, B.S.A., Levis, O.K., Diamond, New Imperial, N.U.T., Massey, P. & M., Sheffield Henderson, Velocette, Sparkbrook, Henley, Zenith.

When writing, please mention the make, type, and horse-power of the machine which interests you, so that we may quote you suitably for your exact requirements. Act at once and do not lose this opportunity of securing the first pick of the many real bargains which we have to offer.

ALEXANDER'S,

113-115, Lothian Road, EDINBURGH.
272-274, Gt. Western Road, GLASGOW.

FELLOWS new magnetos always in stock, any degree for any engine; also a large selection of second-hand magnetos, all makes.

GUARANTEE.—Every magneto, no matter what the price or make, is guaranteed by us. Not merely that same is in good order at time of sale, but a plainly written statement that we guarantee each machine against all defects for a period of 12 months. This, we maintain, justifies us in charging a few shillings more than certain of our competitors.

RELIANCE cordially invite customers to their works to see any of the above on test. Magneto list, giving full particulars, sent upon application. It will pay you to deal with a firm of repute. —Reliance Magneto Repairing Co. (1914), 283, St. John St., London, E.C.1. Tel.: Clerkenwell 4290. T.A.: Remagco, Isling, London. [9816

IGNITION, LIGHTING, ETC.

MAGDYNAMO Engineering Co., Ltd., for magnetos, spares, and repairs.

MOTOR Cyclists fit reliable high quality magnetos now and avoid certain failure of inferior magnetos.

BOSCH Enclosed Waterproof Type D.A.L. Magnetos, Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds, makes your engine a real live engine, give you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE Note, the above type magnetos were originally manufactured for 200h.p. aircraft engines; therefore we have every confidence in claiming them to be the magneto you require for your big machine. Fit one to-day, and see life with a live machine.

HARLEY-DAVIDSON Owner writes: "Magneto to hand; many thanks for prompt despatch, satisfactory in every way; will recommend to my friends."

ZENITH Owner writes: "Since fitting magneto have completed a run of 250 miles; highly satisfied; will certainly recommend these magnetos."

WHY is it that the leading Motor Cyclists—the men who know—are almost all sending to us for their Magnetos?

THERE must be a reason; there is; it is because the Magnetos of quality and guaranteed service, supplied by Magdynamo, beat all other Magnetos.

MAGDYNAMO will take your old Magneto in part payment.

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

ARE You a Discerning Douglas Owner? Do you want a reliable magneto with 12 months' guaranteed service that will give you starting without worry, a smoother running, and more powerful engine and better results from your Douglas? Then send for a latest enclosed waterproof type Bosch ZA2 magneto now, price only £5, carriage 1/6.

C.A.V. Magnetos (not converted starters), ready to fit on Triumphs, B.S.A.'s, Nortons, and P. and M.'s, with 12 months' guaranteed service, price £3/10, carriage 1/6.

THOMSON-BENNETT Magnetos, latest enclosed waterproof type (not converted starters), ready to fit on 55° Clynos and 180° Douglas machines, with 12 months' guaranteed service, price £3/10, carriage 1/6.

MOTOR Cycle and Car Owners, are you testing all your sparking plugs properly? Are you wasting pounds yearly by throwing away good plugs? Fit a Bosch aeroplane hand starter magneto on your garage bench to-day and always have your sparkiug plug tester at hand, price £2, carriage 1/6.

TRADE discounts and export quotations.—Write, call, or 'phone for terms.

A YEAR'S guarantee on repairs. Before you scrap that magneto, whatever its condition, let us see it, we will rebuild your magneto to look and work like new, no matter what make, within 3 days or 24 hours if nrgent, and return it with a written 12 months' guarantee. While your magneto is being repaired we can lend you another free of charge. We could not make these offers if we were not certain of the quality of our work.

YOUR old magneto will be equivalent to new at a low cost. Send us your defective magneto now.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.
Yours faithfully,
JOHN O. GRIFFITS.

23, London Road,
Leicester.

Gentlemen,
I find the Building you sent me very satisfactory, and consider it very good value for the money.
Yours faithfully,
J. CROSBY.

"Alma,"
Alexandra Road,
Cowes, I.O.W.

Dear Sirs,
I have received the Building in good condition and I consider it an excellent piece of workmanship and an exceptional bargain.
Yours faithfully,
L. G. CHINCHEN.

The **V-shaped SANDUM Windscreen**

ITS scientific design, its common-sense 'V' shape, are not the only features that distinguish the Sandum Windscreen above all others. It excels, too, in its most attractive appearance, adding the happiest finishing touch to any outfit. It is unapproachable also in the range and simplicity of its adjustments, in its fine workmanship and material.

Yet it is sold at a price that makes it the best value of any accessory on the market.

Write for full details of both models.

The Sandham Engineering Co., Ltd., 336, Gray's Inn Road, London, W.C. 1.

O'Donovan Motors—*the* Norton

Specialists.

It pays to buy a Norton, and it pays to get it through us. Our Mr. O'Donovan's association with the Norton, and its wonderful list of records and successes (to which he has just added a few more) make him an outstanding authority on this outstanding machine. What he believes in and recommends, you know you, too, can rely upon. Buying a Norton from us ensures your getting the best possible machine in the best possible "tune," whether for touring or sporting purposes. Competition machines are specially tested by Mr. O'Donovan himself on Brooklands Track.

Immediate Delivery of all 1922 Models. Deferred Terms can be arranged.

500 Mile Race Abandoned.

THE cancellation of the 500 Mile Race at Brooklands, on account of the alleged nuisance caused to Weybridge residents by the noise of the competing machines, is much to be deplored.

Not only is an invaluable test lost, but the whole motor cycle movement is stigmatised.

Only those concerned can rightly judge whether the noise complained of is as irritating and displeasing as it is said to be. At the same time, we cannot but think that the decision has been a hasty one. The complaints presumably are based on last year's 500 miles event, when, be it noted, no attempt whatsoever was made to silence the competing motor cycles. Since then some sort of silencer has been fitted to practically every machine that uses the track, and no one will deny that the noise of the average short-distance motor cycle race is considerably reduced in consequence.

It would be an easy matter to ensure that every 500 mile racer was even more efficiently silenced. Then would be the time to decide whether or not the event had caused discomfort to the local residents, and we feel sure that if the ban remained, the B.M.C.R.C. would not wish to carry the matter further when the 1923 event came up for consideration.

Ladies in Competition.

IT is curious, not to say amusing, to hear the varied expressions of opinion upon ladies competing in difficult motor cycle events. This is no new subject with *The Motor Cycle*, but among the ranks of motor cyclists it is discussed far more frequently. Curiously, opinion appears to be diametrically opposed. Some consider women motor cyclists most sporting and plucky and quite enthusiastically applaud their achievements on hills; others, more prudish perhaps, refer scathingly to the masculine attire they affect and the general strenuous appearance not only of their equipment, but of the actual riders themselves.

Whether good is done to the pastime by exhibitions such as we are discussing is also a matter upon which there is no unanimity of opinion. But to the lady motor cyclists suitably attired we owe a great deal, for they are the means of demonstrating convincingly that a modern motor cycle is simple to handle and control and its mechanism easily understood. Hundreds of our lady readers use them daily in the course of their shopping expeditions or to the tennis courts or links, and that is, after all, the really pleasurable use to which motor cycles are applied by the weaker sex.

This Year's Paris Salon.

NEXT month the Paris Automobile Salon will lead off the series of shows of 1923 models. There are no less than one thousand exhibitors. In years past we have rather felt that the motor cycle exhibits were lost to view in the enormity of the Grand Palais. Huge as that building is, it is insufficient to accommodate the motor cycles, the small cars, and the cycle cars, as well as large cars and coachwork. It has been determined, therefore, to hold a second exhibition simultaneously on the Esplanade des Invalides, which is on the other side of the Seine. In it will be the motor cycles and those cars which have a cylinder capacity not exceeding 1,000 c.c.

While the advantage of the separate shows held at the same date will be that the motor cycle exhibits will be easily found and will enjoy greater prominence, it is possible that the same number of visitors will not be attracted to the smaller show as to the larger one.

An index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

BY IXION

Spongy Deposit on Valves.

THE rubbery "growth" on inlet valves, of which some readers complain, is probably ascribable to the vegetable element in compound lubricating oils. Other riders of similar engines, who use an exclusively mineral oil, do not suffer from this deposit. It is slow in accumulating, and causes no trouble; before the deposit becomes really heavy, the engine will need decoking for the sake of the piston and combustion chamber.

Oilproof Tappets.

IS workmanship less careful than it was? Or how is it that not one of my post-war engines has been genuinely oiltight? The tappet guides are invariably the chief offenders. No doubt I over-lubricate a trifle, but most good motor cyclists err on that side, especially if they hog on occasions. It is an awful nuisance to be reduced to using paraffin and a wire saucepan-cleaning brush on a fine summer evening when one ought to be enjoying the open road. Yet I hate to see my crankcase enamelled a dull bronzy-brown by charred deposits of lubricant. Both design and workmanship appear to shriek for concentrated attention in this respect.

New Ailments.

"GOGGLE deafness" and "helmet whistle" continue to make the postman stagger under sacks of correspondence, but few of the letters are illuminating. Mr. T. A. Simpson has sent me one of his "Phace" screens, a sort of bottleneck composed of celluloid and waterproof twill; it is tremendously effective, but as I shall have a pipe in my mouth till within about ten seconds of the death rattle commencing, I can't wear the screen; moreover, it makes one feel rather like a preserved lizard in a museum, revived by the alcohol in its bottle. A Tynesider sends me a most learned letter. I am to hold my watch (*a*) half-an-inch from the tip of my nose; (*b*) pressed against my forehead. I have done so. I cannot hear it tick in either position. S'pose he just wanted to make me look silly in front of my family. Curse him. In my baronial hall there is a suit of armour worn by an ancester, Sir Ixion de Coventry, at the battle of Cressy. I am thinking of getting R. W. Coan to reproduce the headpiece in aluminium, plus a little mouth-hole to stick my pipe through.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Mingling with the Crowd.

AT the end of a day's run in a big trial I generally take my stance in the official garage, and talk to the boys. But on one night of the A.C.U. I elected to mingle with the general public on the edge of the pavement and listen to the untutored criticism of Tom, Dick and Harry, not to speak of Jane, Mabel and Gladys. All that I overheard might be boiled down to just three ejaculations:—

1. "*Aren't* they dirty!" (It had been raining, and hardly one number plate was legible.)
2. "Why do some of them make that funny noise?" (Most of the baby two-strokes were four-stroking at traffic speeds.)
3. "*Poor* boys!" (I am not certain whether this pity was evoked by the mud-soaked aspect of many riders, or by the somewhat haggard expression assumed by most motor cyclists after 80 miles of grease.)

Removing the Piston.

I HAVE just been assisting a novice to decoke an elderly machine, purchased second-hand some months ago. Its designer was one of those kindly souls whose gudgeon pin is a driving fit, clearly marked "In" at one end, so that there is no doubt where to begin punching it out; moreover, when it is out another "In" is revealed at the side of one end of the pin, so that you don't have to calliper it to discover which way the fine taper runs. The job roused two or three reflections, which I now pass on to all concerned. *Imprimis*, the cylinder bore was scored, because at some previous removal of the gudgeon the last owner had failed to replace it with its ends flush against the piston. Now it is not the easiest job in the world for an amateur to ascertain whether his gudgeon has been driven right home or not, and the provision of a ring gauge—cost about 3d.—would have saved this unknown owner from damaging his cylinder. Moreover, the discovery—at a later decokement—that he had scored his cylinder had apparently deterred him from removing his piston on the next occasion. At any rate, the inside of the piston contained twice as much carbon as the combustion chamber. The moral is that if pistons are arranged for amateur removal, pretty thorough resistance should be provided. I even wonder how many amateur garages boast a pair of callipers, by which the operator may determine whether his piston is out of round after the pin has been driven back. Where neither callipers nor a ring gauge are provided, is it worth while stamping "In" all over the engine?

Occasional Comments.—

The 200 Miles Cycle Car Race.

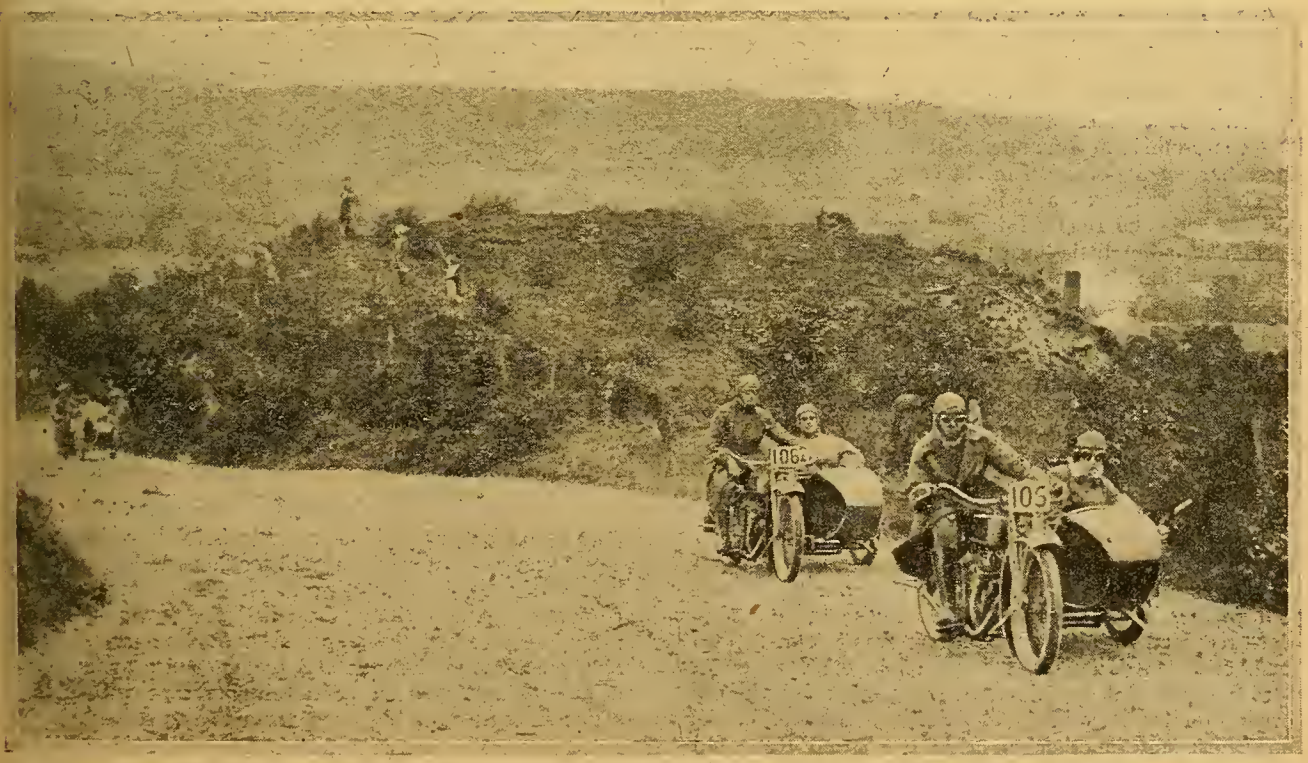
THE 1,100 c.c. edition of the 200 miles race was peculiarly interesting to motor cyclists; firstly, because it was contested by engines no larger than many employed in sidecar outfits; secondly, because these 1,100 c.c. cycle cars represent a mount on to which many of us hope to graduate some day, when we get our next rise of salary; thirdly, because France fought (and incidentally thrashed) our two leading makes of cycle car. From a sporting point of view, the top spot of the race was Frazer Nash; to spend 42 mins. changing a piston, and to finish at an average speed of 62 m.p.h., is some feat. The three-wheelers put up a very disappointing display indeed; and our best four-wheeled cycle car, the G.N., could not live with the French baby fours. Next year the twins may have a race to themselves, leaving British miniature fours to show they are as fast as the French.

About Spark Gaps.

THE least sophisticated motor cyclist has begun to smell a rat in connection with spark gaps. Such extravagant claims have been made for certain devices in this line that doubts of them all have been aroused. In sending me a set of the firm's spark gap cable terminals, Mr. Alexander Lodge carefully refrains from suggesting that they halve your fuel consumption or double your h.p. He mildly remarks that his spark gaps are cheap, and that they do no harm where the sparking conditions are otherwise good; but he makes no positive claim for them beyond the well attested fact that they tend to prevent misfiring when the plugs have to work under bad conditions. He does not believe that any rival device can do more. Unluckily the four engines at present in my hands for test all spark with an almost monotonous regularity; but the Lodge views on the subject will certainly interest some of our readers.

A Good Course.

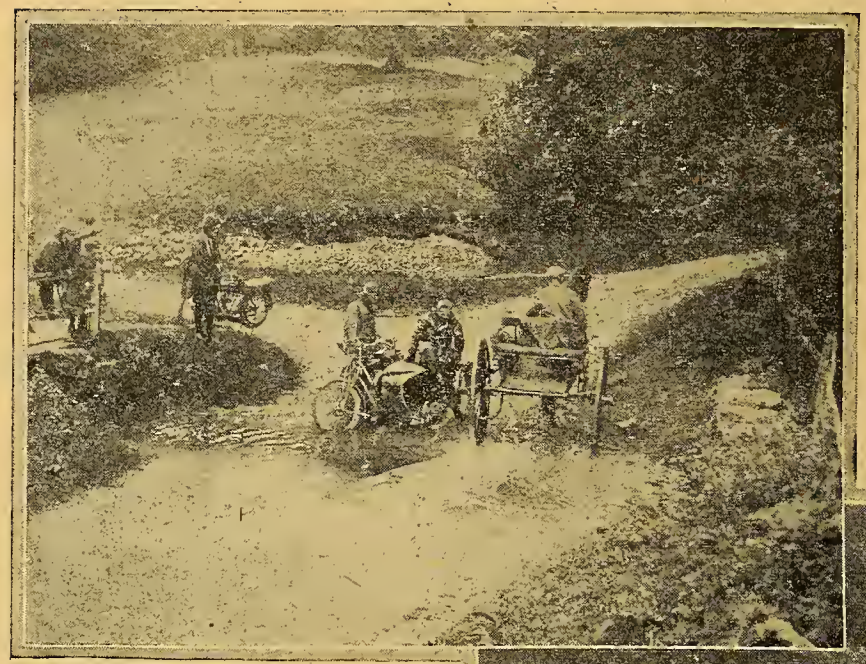
THE A.C.U. has oscillated between several opposed policies for its Six Days Trials, but this year it came very near what is probably the best solution. When it concentrated on freak hills, it was told that motor cycles were not chamois. When it utilised normal roads (as in 1921), we all arose derisively, and enquired if the trial was intended for perambulators. This year the Union included just one genuine freak hill. The rest of the route was composed as far as possible of rough, twisty, undulating lanes. Each section, considered separately, was just the sort of stuff which lots of rural motor cyclists cover every day of their lives; but the sum total of these sections imposed a continuous and cumulative strain on brakes and gear boxes and engines, whilst the prolonged avoidance of main roads rendered it extremely difficult for anybody to pick up time lost over petty troubles. With a little assistance from the clerk of the weather, a six day trial on these lines develops into a very substantial ordeal, mild as any individual section will seem to a rider who knows it by heart. For example, the Friday morning consisted of about 96 miles; and 75 of them were quite exacting, though not an inch was colonial or unfair.



Drayton Cross Hill which was included in the second day's run of the Six Days Trials. Years ago the hill was considered quite a formidable climb, but all the machines this year took it "on the run." E. A. Bridgman (998 Indian sidecar) and R. Swanton following on a similar machine.

ANALYSING THE SIX DAYS TRIALS.

Unequal Performances which gained Equal Awards. Lessons to be learned—by Prospective Buyer and Motor Cycle Designer—from the Trials.

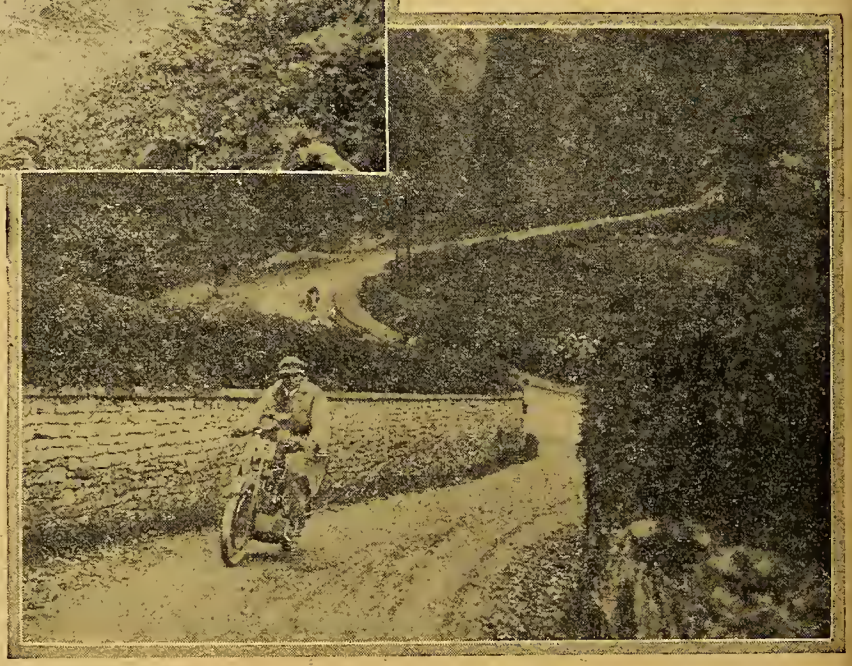


None of the watersplashes were deep enough to wet one's feet, and E. Mundey's (New Hudson sidecar) stop occurred before he actually reached the ford.

IN this year's Six Days Trials the A.C.U. trod the thorny path of compromise in a manner that the most hardened politician might envy.

The position was a delicate one. On one side the 1921 affair of many special tests but little hard road work was being heartily condemned; on the other there were lively murmurings against anything freakish or impossible. The A.C.U. listened to both and then successfully devised a scheme whereby, it was hoped, everybody concerned would be pleased.

Unfortunately, "everybody concerned" does not include all of the general public.



R. P. Ranson (496 Lea Francis) on Daneway Hill, a test that looks difficult but did not cause any failures.

It happened thus. The trials were undoubtedly severe; one or two of the hills were among the worst in the country; the track test of twenty-five laps found out further weaknesses in the machines; but the standard required for a first-class award was too low. Two machines, "A" and "B," started in the same class. "A" climbed Rosedale and every other hill in the event in a faultless manner, gaining five bonus marks on Alms, and another eight in the speed test, and losing none under the time, silence, brakes, or condition headings. "B" failed on Rosedale and Longhope, and successfully claimed baulks on White Horse and Boltby Bank, did not attempt Alms Hill, lost five marks on time (caused by unreliability), four in the final examination (for a defective steering head), and only gained a bonus of two in the speed test. "A" and "B" each gained a gold medal.

It is not suggested that "B" should have had no award—his performance was infinitely better than, say, "C," whom we imagine retired on the second day with a fractured sidecar chassis *plus* a seized layshaft—but, certainly, it is misleading to class him with "A."

The Man-in-the-Street may or may not be sufficiently interested to delve into the comparative values of various gold medals—if he does he will find it a complicated business, where equal aggregates may gain different awards—but it would have indubitably sealed the whole event as the most valuable ever run had the medal scale, to use an appropriate metaphor, been geared higher and with close ratios instead of a big drop from top to second.

Fair Marking.

On the whole, the marking throughout the trial was very fair; if anything, there were more cases of

Analysing the Six Days Trials.

undeserved clean sheets than unfair deductions. An analysis of the performances, class by class, is, therefore, interesting.

To give credit where credit is due, we will endeavour to distinguish between the "100% golds" and the "only-just-got-away-with-it golds."

Thirteen started in the 250 c.c. class, and six finished with as many or more marks than they were credited with at the outset—480.

	m.p.h.	Mks.
G. S. Davison (247 Levis)	43.5	489
A. R. Edwards (247 Levis)	42.8	488
M. Bishop (247 Sun-Vitesse)	37.3	486
J. Wilkins (249 New Imp.)	42.4	484
B. Kershaw (249 New Imp.)	43.0	483
L. Horton (249 New Imp.)	42.4	480

Only one retired and only two more failed to qualify for premier awards. One of the latter was the 169 c.c. J.E.S., the general performance of which entitles it to special praise, irrespective of how many marks it may have lost by an arbitrary classification. On the face of it, it might be said that the two-stroke engine has beaten the four-stroke type, but it should be noted that the latter was only represented in the proportion of five to eight. Moreover, through a bad tactical error, the New Imperial riders gave away 28 marks between them by arriving too early at a check.

Eleven out of twenty-seven 350 c.c. solo entrants dropped no marks, which is not quite such a good proportion, but, nevertheless, is better than their rivals on larger and more expensive machines.

	m.p.h.	Mks.
E. Searle (349 Sheffield-Henderson)	48.3	493
J. Lidstone (349 James)	40.1	487
C. W. Hough (349 A.J.S.)	44.7	485
W. Handley (249 O.K.-Junior)	39.6	485
G. Kimberley (349 James)	40.1	485
E. A. Barnett (346 Francis-Barnett)	42.6	482
E. W. Choldcroft (349 A.J.S.)	44.6	482
F. C. North (292 O.K.-Junior)	36.5	482
Mrs. O. M. Knowles (349 A.J.S.)	40.0	480
L. E. Clulee (292 Allon)	40.0	480
N. Hall (292 O.K.-Junior)	39.5	480

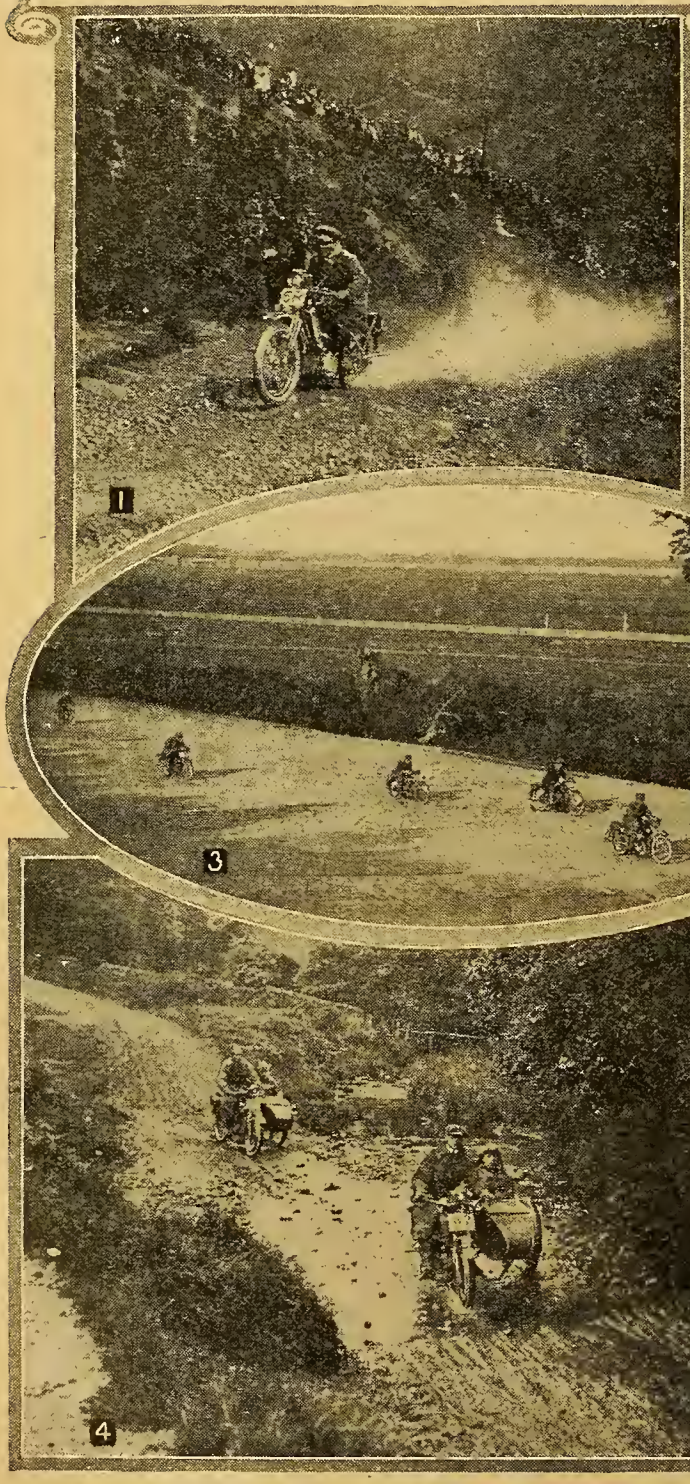
Five others won gold medals, but four retired, which is considerably less satisfactory than the previous class. Although the four-stroke machines, helped by superior speed, occupy a strong position, the annexation of the team prize by the two-stroke 292 c.c. O.K.-Juniors more than levels up matters. Searle's performance as a lone entry is particularly creditable.

The 500 c.c. class was disappointing. Only eight of the twenty one starters scored full marks.

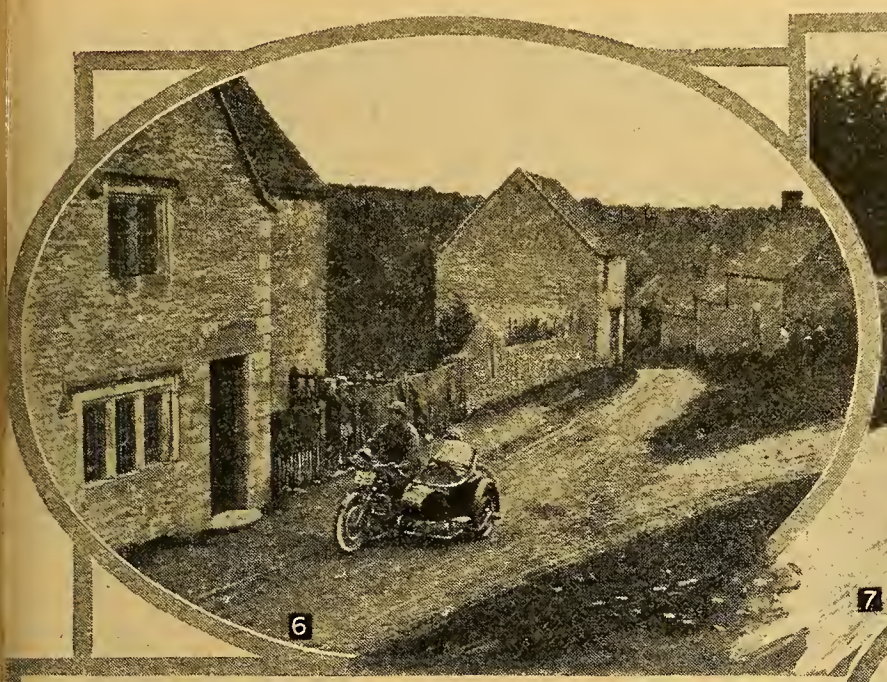
	m.p.h.	Mks.
J. H. Davies (492 Sunbeam)	52.8	491
G. Dance (499 Sunbeam)	52.3	489
J. A. Newman (494 Douglas)	49.0	489

Long second-gear climbs occupied a considerable portion of Thursday's run (from Llandrindod Wells to Gloucester). (Top) Over the open moorland near Llangammarch: J. A. Newman (494 Douglas), and J. Westwood-Wills (547 Powell). (Centre) E. Foster (698 Raleigh) and G. F. Bainbridge (739 Martinsyde) on the Llangynidr Pass hairpin. (Bottom) A. G. Wall (348 Connaught), N. Hall (292 O.K.-Junior) and C. L. Sprosen (348 Connaught) on Panne Hill.

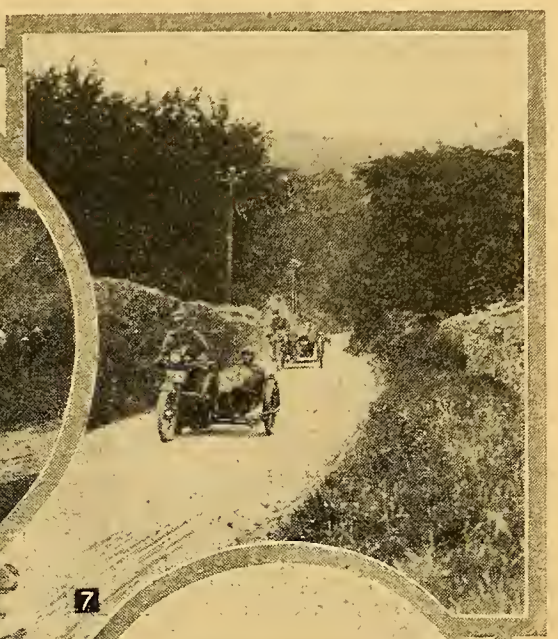
"SIX DAYS" IMPRESSIONS.



(1) W. Scott (532 Scott) after passing the worst portion of Rosedale Abbey Bank. (2) P. L. Mayo (249 Coventry Eagle) and R. P. Purnell (169 J.E.S.) at the foot of Llangynidr Hill. (3) Some of the 250 c.c. and 350 c.c. machines in the speed test at Brooklands. (4) F. T. Sibley (499 Rudge sidecar) and A. W. Hadley (499 Rudge sidecar) passing through the shallow water splash near Leek. (5) J. H. Davis (492 Sunbeam) and W. L. Gard (499 Rudge) on Whitehouse Hill. (6) P. W. Bishoff (599 Sunbeam sidecar) near Tetbury.

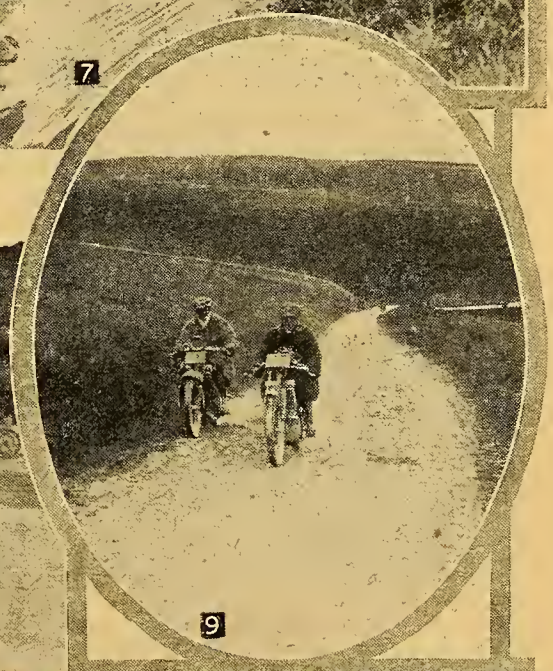


6

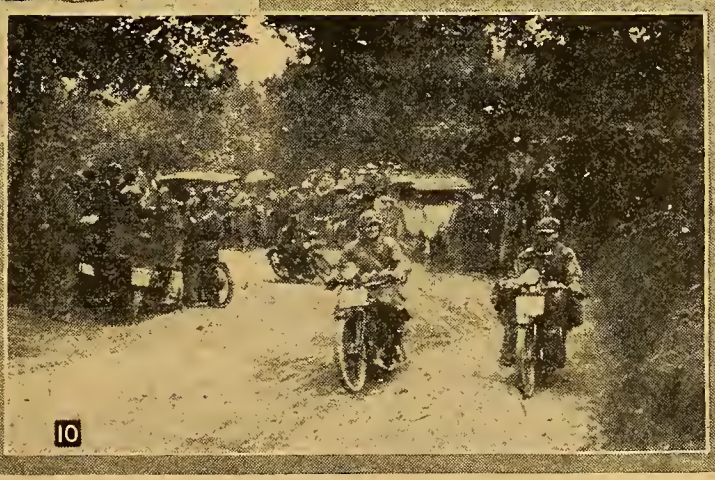


7

8



9



10

(7) Two of the 1,000 c.c. sidecar prize winners: G. Baxter and C. W. Johnston on 989 c.c. Harley Davidson sidecars making the ascent of Bubbs Hill. (8) At the start of the speed test for the 500 c.c. and 750 c.c. machines. Some excellent times were made. (9) G. Hill and W. Moore ascending Llangammarch Hill on 532 c.c. Scotts. (10) E. W. Choldcroft (349 A.J.S.) and W. Johnson (292 Allon) on the "Fiddler's Elbow" near Abergavenny.

Analysing the Six Days Trials.

	m.p.h.	Mks.
C. Greenwood (499 Sunbeam)	48.0	488
W. T. Woodcock (498 Ariel)	48.0	487
F. A. Longman (498 Ariel)	46.3	485
A. Rollason (498 Ariel) ...	44.2	482
A. Bennett (499 Sunbeam)	49.9	480

Another eight retired from various causes, usually pure mechanical breakdowns; and one rider had to be content with a silver medal, incidentally owing to a failure in brakes.

The "seven-fifty" solos are even less impressive. Fifteen started, but only three finished square on marks, and not one earned a solitary bonus point that was not discounted by earlier deductions.

	m.p.h.	Mks.
G. F. Bainbridge (739 Martinsyde	56.3	480
G. Hill (532 Scott) ...	45.5	480
W. Moore (532 Scott) ...	47.2	480

Two more just scraped through with premier awards, three got "silvers," one a "bronze," and six did not finish.

There were only three starters in the largest solo class, but one of them certainly deserves a line to himself.

	m.p.h.	Marks
J. A. Watson-Bourne and G. Brough (976 Brough-Superior)	64.6	482

Another gained his gold with 13 marks below the datum line, and the third broke his frame.

Neither of the two 350 c.c. sidecars completed the trials; it was hardly a fair test for them, anyhow.

Two 600 c.c. sidecars came up to our line of demarcation, and although seventeen started, it would be obviously unfair to draw comparisons with the solo percentages.

	m.p.h.	Marks
P. Cunningham (555 P. and M. sc.) ...	37.4	484
R. Lewis (555 P. and M. sc.) ...	37.5	483

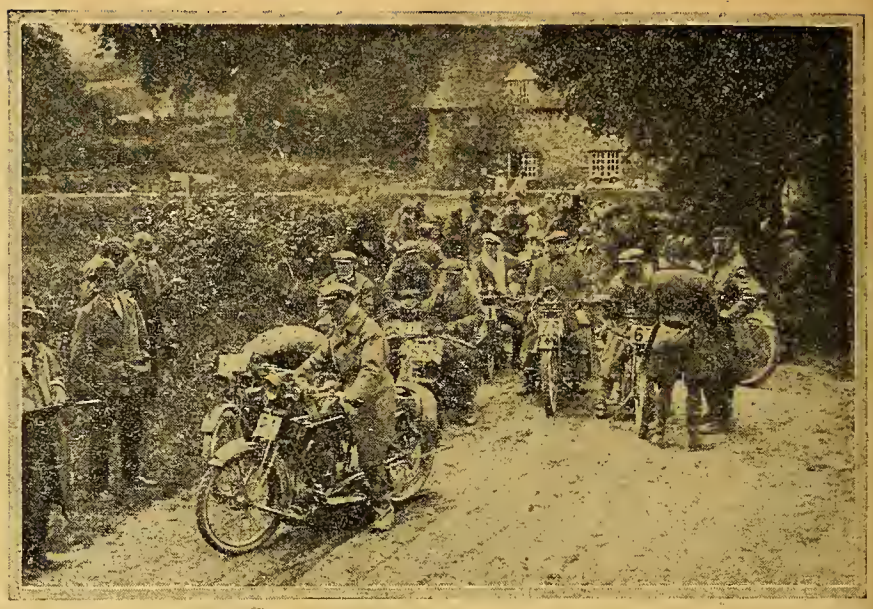
Eight retired, but the remaining seven all succeeded in qualifying for premier awards. Incidentally, this is the first and only case where the highest aggregate of marks did not go to the man who had made the highest speed in his class.

Seven big sidecar outfits earned at least as many bonus marks as they had previously lost, but thirty-eight started, so the proportion is none too good.

	m.p.h.	Marks
F. W. Giles (800 A.J.S. sc.)	50.9	494
T. R. Allchin (989 Harley-D. sc.) ...	47.3	486
A. A. Symes (678 Martinsyde sc.) ...	43.9	482
G. Baxter (989 Harley-D. sc.) ...	45.8	482
F. O'Brien (964 Matchless sc.)	45.5	482
F. J. Ellis (993 Matchless sc.) ...	43.5	481
L. Newey (994 Ariel sc.)	44.5	481

Eleven others were awarded "golds," a twelfth qualified, but was ineligible, since he had been competing for the Centre Premiership only, seven got lesser awards, and no fewer than twelve retired. The A.J.S. and the Martinsyde, therefore, earn special praise on account of the small capacity of their engines.

The Scott Sociable had a class to itself, but lost thirty-five marks on hills and one in the speed test, although not from lack of speed. It was awarded a certificate.



Although, as it turned out, it was not really necessary, competitors were only allowed up Alms Hill singly. In this group at the foot are W. T. Woodcock (498 Ariel), J. Westwood-Wills (547 Powell), George Brough—keeping the saddle of the Brough-Superior warm while Watson-Bourne prospects the hill—Tom Peck (665 Ariel), D. H. Davidson (596 Indian Scout) and, standing on the extreme right, W. D. Pugh, the big twin Harley rider.

Five conventional three-wheelers started; four were on the *plus* side at the finish.

	m.p.h.	Marks.
W. Carr (1,090 Morgan-Anzani) ...	49.1	493
H. F. S. Morgan (978 Morgan-Jap) ...	48.9	492
S. Hall (1,096 Morgan-Mag.)	43.3	487
F. S. Spouse (980 T.B.)	41.6	483

The fifth entrant retired on the first day owing to a stone becoming wedged in the driving chain.

Thus it will readily be admitted that the three-wheelers and the 250 c.c. solo lightweights outshone the machines in any other class.

Reasons are not far to seek. The cycle cars won because they were better able to climb freak hills than even the most expertly-driven solo machines, and because they incurred less ill-effects in the way of chassis distortions and breakages on rough going than the sidecars.

Several factors allowed the small solo machines to score: (1) They were more easily handled on rough going; (2) less was expected of them on the track; (3) possessing early numbers, they generally got more of a clean run at the difficult hills than the later people; (4) they were in every case driven by expert trade riders; and (5) they are much more efficient than most people, even now, realise.

Further important facts may be gleaned from a study of the result sheets as published last week.

No machine in the trial gained full marks for silence, the nearest approach—*minus* one point each—being the three Scotts, Mayo's Coventry Eagle, and Austin's Coventry Victor. That the only two-stroke twins in the event have scored in this respect certainly points to the advantage of this type of engine, but the fact that the others are a single-cylinder and a flat twin would seem to prove that silence may be obtained from any kind of engine if the expansion arrangements

are properly designed. The Coventry Victor was fitted with a proprietary silencer.

Brake inefficiency was responsible for many lost points, but it is noteworthy that only one machine in the 250 c.c. and 350 c.c. classes, and none in the 1,000 c.c. cycle cars, lost marks under this heading. The main brake test was carried out on the Brooklands test hill, but it would be interesting to know if the A.C.U. official observed making notes on a main road descent on Wednesday was responsible for any of the deductions. If so, it was not a fair method; too much depended on each rider's natural style of driving down a hill.

All the 600 c.c. sidecars lost only three marks between them on the final examination, and the three-wheelers only one. Otherwise the lack of condition penalties were very evenly spaced throughout the entry list, and never were they unduly heavy. Indeed, the excellent order of the machine at the finish of such a strenuous event was the subject of much favourable comment.

The only failures to gain bonus marks in the speed test were those who suffered actual mechanical trouble therein, and of these there were surprisingly few. Another five miles per hour on the schedule speeds all round should not by any means be an impossible task next year.

Fourteen riders gained double figures on their required minimums :—

250 c.c. Class.

G. S. Davison (247 Levis) ...	43.5 m.p.h.	(+13)
B. Kershaw (249 New Imperial)	43.0 m.p.h.	(+13)
A. R. Edwards (247 Levis)	42.8 m.p.h.	(+12)
J. Wilkins (249 New Imperial) ...	42.4 m.p.h.	(+12)

350 c.c. Class.

E. Searle (349 Sheffield-Henderson)	48.3 m.p.h.	(+13)
H. F. Harris (349 A.J.S.) ...	45.8 m.p.h.	(+10)
H. Greaves (349 Beardmore) ...	45.7 m.p.h.	(+10)

500 c.c. Class.

J. H. Davies (492 Sunbeam) ...	52.8 m.p.h.	(+12)
G. Dance (499 Sunbeam) ...	52.3 m.p.h.	(+12)

750 c.c. Class.

G. F. Bainbridge (739 Martinsyde)	56.3 m.p.h.	(+12)

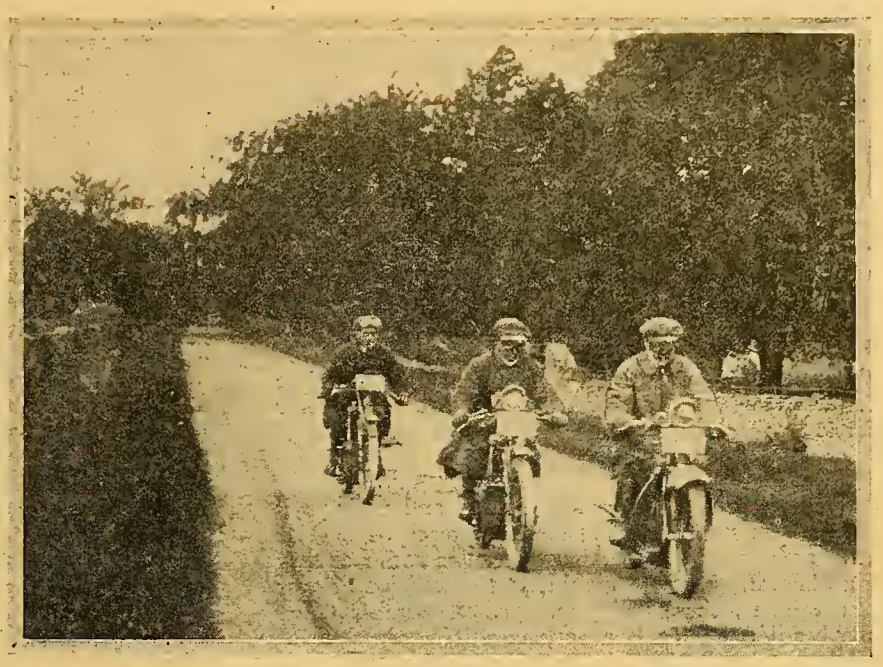
1,000 c.c. Class.

J. A. Watson-Bourne (976 Brough-Superior)	64.6 m.p.h.	(+16)

1,000 c.c. Sidecars.

F. W. Giles (800 A.J.S. sc.) ...	50.9 m.p.h.	(+12)
W. Carr (1,096 Morgan) ...	49.1 m.p.h.	(+11)
H. F. S. Morgan (978 Morgan) ...	48.9 m.p.h.	(+10)

While it might not always have been good policy to "open out" fully on the track when half throttle would have given the required speed, every credit is due to those who did so successfully.



Teams usually kept together on the road, and the Scott riders—W. Moore, W. Scott and G. Hill—were no exception to the rule.

Fuel consumption was not tested officially, but it was very noticeable that the first morning's run, which did not traverse an area well catered for by garages, caused a great number to run out of petrol before the lunch stop was reached. The distance was ninety-five miles—strenuous going, it is true—and one can only surmise that petrol tanks are still smaller than they ought to be. Anyone who lost marks on this occasion deserved to.

Rosedale Abbey Bank.

As was inferred earlier, the road portion of the test was exceptionally severe without being unfair. Rosedale Abbey Bank is certainly a freak hill, but, as we pointed out in our report a fortnight ago, controllability and an ample reserve of power were usually fully rewarded. Baulking was common, but in one or two instances it proved a blessing in disguise. Although from the spectacular point of view "close formation" among the competitors is an admirable arrangement, we would recommend either that the starting intervals be lengthened next year, or that the riders be sent up all the worst hills singly, as was done at Alms.

The sidecars did not distinguish themselves on Rosedale. True, Giles made one of the best ascents of the day; but are Shepherd, Hall, Morgan, or Carr (on the three-wheelers) as super-expert drivers as Giles? It hardly seems likely, and therefore we must regard Giles as the exception that proves the rule.

Longhope, the next worst hill, again proved that certain machines are more controllable than others, but baulking was even more common here, and so was a great deal of rank bad driving. Only one man proved capable of surmounting the hill at speed (until he ran into another unfortunate); that was Watson-Bourne on the Brough-Superior, and, again, he is

Analysing the Six Days Trials.—

rather an exceptionally good driver on that type of machine. At the same time, the particular brand of slime on Longhope was less treacherous to large tyres —which in itself is quite a valuable lesson.

Friday's chief point of interest—Alms Hill—was, fortunately, dry. We say "fortunately" advisedly, for, as it was, it became a very fair test. It is as steep as Rosedale, and it proved that gradient alone cannot cause a modern motor cycle to hesitate—even after 750 miles of the worst roads in the country. Had it been wet it would have been a driving-test pure and simple, and the element of luck would have entered the matter to a greater extent than is desirable. It allowed many competitors to retrieve their Rosedale failures, which was a thoroughly just course of events for all concerned.

Transmission Failures Too Common.

There were forty-three retirements, and perhaps it is by a study of these that the trials teach us most of all. Last week we tabulated the causes as far as they were known. Eleven were due to transmission or gear box failures, these being the greatest number under one heading. This is a very unsatisfactory state of affairs, and it is sincerely to be hoped that the manufacturers will take note and endeavour to eliminate the weak points in 1923 designs. It is futile to reason that the average private owner does not impose such severe strains on his gear box as did a competitor in the trials; he may not in a thousand miles, but in ten thousand the same troubles will almost certainly occur.

Frames and sidecar chassis stood the bucketing remarkably well, but breakages were not unknown.

Valve trouble was common, and although magnetos did not put many machines right out of the event, they spoiled the performances of quite a number.

Plug troubles were especially numerous during the track test; apparently the average touring machine is not fitted with plugs that will stand up to prolonged high speed.

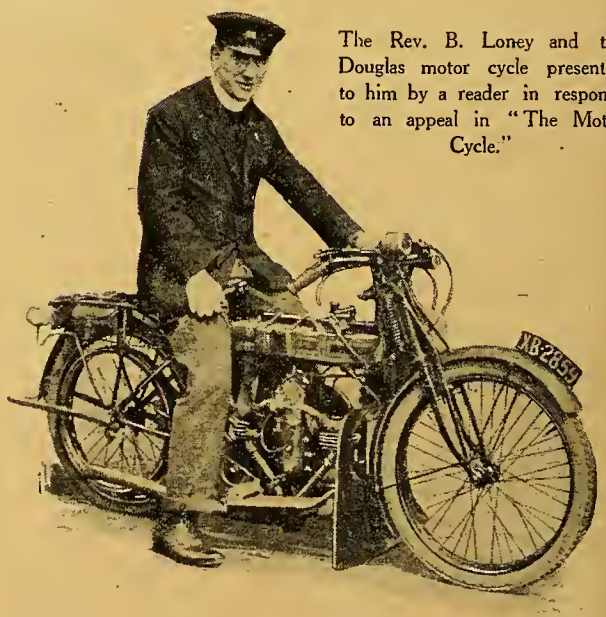
Tyres contributed their quota of disaster, and although such preventatives as Jackson's Impervo—which was largely used—may possibly have lessened the number of stops for minor punctures, when a tyre "went" it usually went very badly indeed. Both the crashes on the track were due to front tyre failures.

The number of accidents on the road would point to the sence of more ineffective brakes than were noted on Saturday at Brooklands.

To say more would savour of repetition. The results, published last week, if read carefully in conjunction with the report of the trials, will provide more information than any general article can convey.

A KINDLY ACTION.

SOME little time ago we received a call from a clergyman working in the east end of London, who found it well-nigh impossible to carry out his Sunday duties owing to lack of transport. He is the Rev. B. Loney, of the Missions to Seamen's Institute, Victoria Dock Road, London, E.16. Many of those who do the best work in this world, and who labour for the welfare of their fellow-creatures, are inadequately paid, and Mr. Loney was quite unable to purchase a motor cycle to enable him to get from place to place on what is to him the hardest working day of the week. Consequently his appeal was inserted in a recent issue of *The Motor Cycle*, with the result that a lady and gentleman who had advertised a 349 c.c. Douglas in the same number immediately gave it to Mr. Loney. The machine is in perfect condition and very little used, and had only recently been overhauled. We naturally do not make a habit of inserting appeals of this kind, but the case in question appeared to us to be a most deserving one, and we are glad to think that such a ready response was obtained.

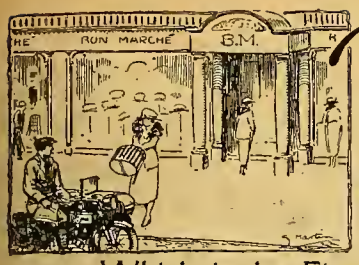


The Rev. B. Loney and the Douglas motor cycle presented to him by a reader in response to an appeal in "The Motor Cycle."

VALUABLE TECHNICAL DATA.

ONE of the most interesting and useful annual publications in connection with the motor movement has been "The Automobile Engineer Year Book," which now appears under a new title, "The Automobile Engineer Reference Book." Compiled by the editorial staff of our sister journal, *The Automobile Engineer*, this volume is in effect a new and revised edition of the year book, which has in the past been widely recognised as the standard technical work of reference for engineers, designers, manufacturers, and private motorists.

Undoubtedly, in its present form "The Automobile Engineer Reference Book," which can be obtained from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Tudor Street, London, E.C.4, price 6s. net, or post free 6s. 6d., is a most valuable record concerning motor vehicle design and production generally.



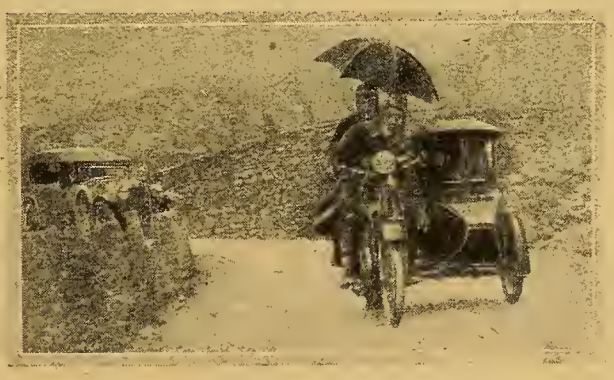
Passenger Machine Topics

BY FRIAR JOHN

Which is the Finest Prospect in Great Britain? On Cleaning Muddy Outfits. Springing of Sidecars.

ONE of my colleagues is determined to have his next sidecar attached to the right-hand side of the machine. But his reasons have no bearing whatever on the question of safety. He is one of that awful brigade which rides on the right camber of the road and which asserts that higher speeds can be maintained on that side because of the much easier steering; also he says he is slightly deaf in the left ear, and finds it difficult to converse with his passenger (he is married, too). Of course, all journalists have to be deaf in one ear and blind in one eye. But in his case it is the left ear, whereas the journalist's deaf ear can be right or left according to his desire and to circumstances. So presently we shall have another disciple of Mr. Mortimer Batten—I wonder for how long?

WHERE is there most room for improvements in sidecar comfort? I asked this question some weeks ago. Judging from the diverse nature of the replies (published and unpublished), it seems that readers think that chassis and upholstery springing leaves more to be desired than any other feature of the sidecar; then come criticisms of hoods and screens. Several correspondents are severe on such details as lack of luggage accommodation, finish of the upholstery, and general design. But unquestionably it is the subject of springing which interests the majority. One reader goes so far as to say that he intends this winter to fit shock absorbers on the springs and to replace the seat with a hammock suspended from coil springs, and then fill the hammock with air cushions. I happen to know the lady who rides in this comfort-seeker's sidecar. She has ridden many thousands of miles in sidecars, and to listen to her enthusiastic talk of the long and splendid runs she has experienced, one would not judge her to be the revolutionary she is. But the heart-to-heart talks about these "splendid runs" are mostly heard in private—in fact, the real opinion of many lady passengers concerning some modern sidecars has never been ventured in words. The ladies are too wise to do that. Another astonishing thing observable in the letters is that the majority of the grumbles are from owners of big and powerful sidecars, many of whom appear to want Rolls-Royce comfort at Ford car price. I do, too, but I know there is a limit to the springing of so small a vehicle as a sidecar.



An incident in the 1922 International Six Days Trials. A spectator descending from the top of the St. Gothard Pass in the pouring rain. The passenger is, of course, well protected by the hood and screen, but the pillion rider is holding an umbrella over himself and the driver.

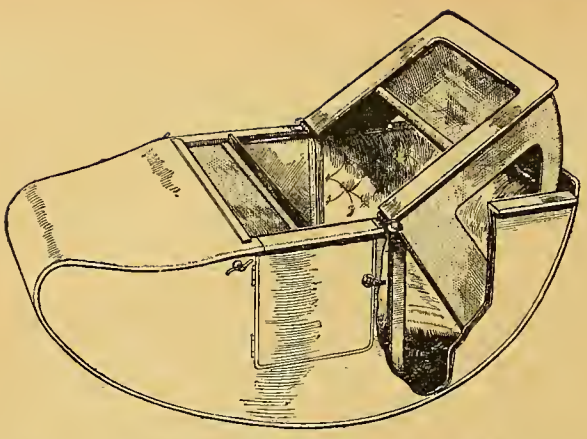
THE sporting sidecar owner is indifferent to or content—I prefer to say content—with his light sidecar. Madamoiselle does not grumble either at the reclining attitude or at the leather racing helmet, much less does she grumble at the springs. She likes the zebra stripes and canary yellow enamel, and the more penetrating the exhaust the better. No! the grumbles are reserved for a later date. But it was ever thus.

WHICH is the finest prospect in Great Britain? This question arose the other day whilst discussing roads and scenery with several sidecarists who were making preparations for touring.

Ideas differed widely. The people I spoke to considered the following scenes to be the finest from their particular points of view:

(*a*) Edinburgh from Carlton Hill.
(*b*) Pass of Aberglasyn from the bridge.
(*c*) Looking back towards the Black Mountains (South Wales) from the hill between Llangynidr and Beaufort.
(*d*) From the top of Applecross.
(*e*) From the Devil's Bridge (Central Wales).
(*f*) Severn Estuary from the upper road between Gloucester and Bristol.
(*g*) From the top of Fish Hill, Broadway, in the Cotswolds.
(*h*) Wharfedale looking towards Simon's Seat from Burnsall Fell.
(*i*) The Langdale Pikes from the Elterwater—Langdale Road.

A good deal depends on the state of mind when a first impression is made—it's a question of nerves and stomach after all. It is not at all likely that unforgettable impressions of scenery would be registered on a day of continuous mechanical trouble and thunder-



An ingenious sidecar with collapsible and concealed hood. In front of the latter is a sliding celluloid screen and over the open portion by the door there is a sliding apron. When erected the hood, screen and apron completely protect the passenger. Mr. W. G. Davies of 155, Rathcole Gardens, Hornsey, London, N.8, has protected the device.

storms. But, given a cheery engine, brilliant sunlight and good road surfaces, one can quite easily praise the panoramas of the Great North Road.

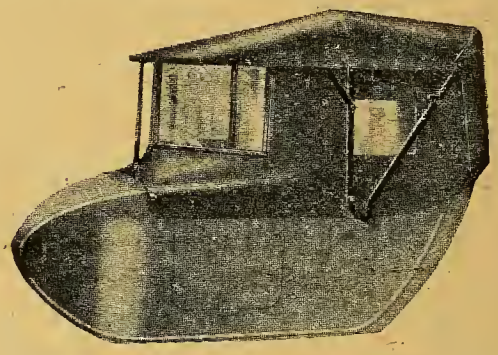
◈ ◈ ◈ ◈

THE job of cleaning a muddy outfit is no sinecure. It is dog's work. The worst of it is after spending precious hours on the filthy job, half an hour's run on a muddy road causes the outfit to look as disreputable as ever. I suppose I ought to use disc wheels to avoid the irritating spoke cleaning, and buy an engine that cannot leak oil, and avoid tarred roads and always wait until the roads are dry; then I should stand a fair chance of sleeping with a peaceful mind. Of course, the alternative is to pay five shillings each time to the garage boy. What a grouse for the beginning of September!

This soreness is proved by the fact that my garage partner simply stands four or five yards off his car, and, with a hose, calmly directs a devastating stream of water on to the mud. *He* appears to enjoy the job, but I have to grovel about with a brush and bucket.

◈ ◈ ◈ ◈

WHAT an astonishing difference a new tyre makes to the steering of a heavy sidecar. I had a heavy oversize studded cover, which did splendid service on the front, after covering many thousands of miles on the back wheel. It had worn very flat, and, being particularly wide in the tread, the slightest deflation caused objectionable dragging and a decided impression that the sidecar must be badly out of alignment. A narrow contact, such as given by tyres having a central rib on the tread, allows the easiest of steering.



A hood and screen particularly neat in appearance—the Easyquip. The screen, which is V-shaped, offers the least possible resistance to the wind, and opens and shuts with the door. It is sold by Coventry Equipments, Ltd., Empire Works, Coventry.

ON PICTURESQUE DANEWAY HILL IN THE SIX DAYS TRIALS. T. Peck (665 Ariel), followed by W. D. Pugh (989 Harley Davidson), who on his big machine made some very excellent ascents of the worst hills.

IDEAS: USEFUL AND INGENIOUS.

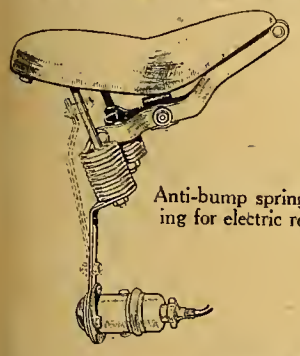
A Selection of our Readers' Home-made "Gadgets," with Practical Hints on Work in the Garage and on the Road.

Petrol Level.

FOR ordinary purposes the petrol level in the average carburetter should be just as high in the jet as it can be without overflowing.

Protecting the Rear Lamp.

HAVING experienced a trouble frequently met with in electric lighting sets, Mr. C. S. Rawlins has attempted to remedy the matter in a very practical way. The trouble referred to is the breaking of tail lamp bulb filaments, and the alternative method of

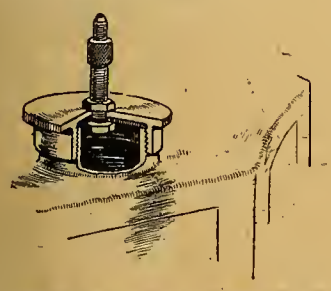


Anti-bump spring mounting for electric rear lamp.

lamp mounting which constitutes the cure takes advantage of the saddle springing. A strip of iron is used to secure the lamp to the nut at the base of the saddle spring, and an additional strut to the spring plunger rod prevents undue whipping. The clip on the rod should be free enough to slide a little.

Assisting Gravity Drip Feed.

SOME of the cheaper ultra-lightweights are equipped with a gravity drip feed lubrication system, and sometimes there is a difficulty in getting oil to pass in sufficient quantities.



For putting air pressure in the oil tank, when gravity drip lubrication is used.

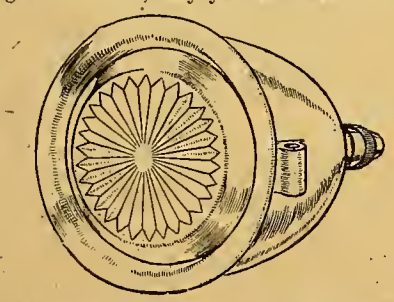
A Scottish reader, Mr. G. Glass, overcame this trouble by fitting a tyre valve in the oil-filler cap, giving a small amount of pressure as needed with the tyre pump.

Thief-proofing an Enfield.

SIMPLICITY itself is Mr. F. T. Prettyman's tip for preventing unauthorised driving of his Enfield. When leaving it unattended, he puts the gear in neutral, lifts the gear control lever vertically against its spring and removes the small pinion (on squared shaft) which operates the rack in the centre of the gear. This is the work of a moment, no tools are required, and it is practically impossible to make the machine ridable under power until the pinion is replaced.

Anti-Dazzle Headlamp Glass.

THOSE who find that the electric headlamps frequently fitted to American machines give insufficient light for fast driving, and incidentally on occasion show an annoying black spot, yet are not sufficiently roomy to accommodate a big gas-filled bulb, may yet take heart.



A unique improvisation. In place of the ordinary lens a fruit dish is used, the pattern making an effective light diffuser.

P. N. D. discovered that a cheap "cut" glass fruit dish could be obtained of the correct size to replace the existing front glass. It can be held in place independently of the usual fitting by means of a length of uncovered Bowden casing inserted in a piece of rubber gas tubing of the correct size and sprung into position while the glass is held in place.

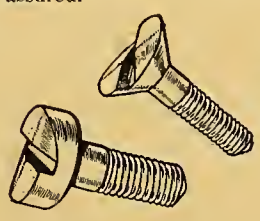
It will be found that the headlamp will easily accommodate a large half-watt bulb, while the star pattern on the glass diffuses the light so as to eliminate the black spot.

Carrying a Spare Tube.

WHEN fixing a spare inner tube round the handle-bars the best thing to use is a broad wrist strap of the kind made to go twice round the wrist. A hole should be cut, through which the valve is passed.

Making Screws Irremovable.

WHEN such items as watches, club badges, and speedometers are to be fixed permanently to a machine it may be worth while to adopt the petty theft foiling device recommended by C. N. B., of Plumstead, London, S.E. Briefly, his method is to file a slope down into the screwhead slots, leaving the full depth only on the side with which the screwdriver engages when driving the screw home. Screws so treated cannot be unscrewed, except, perhaps, with a hammer and chisel; therefore the safety of permanent or valuable accessories is assured.

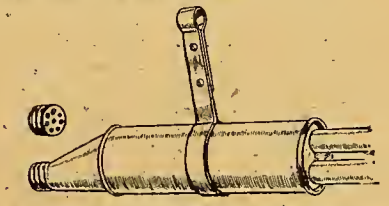


Screws with part of the head filed down to prevent their withdrawal.

Cheaper than Fines.

OWNERS of second-hand machines that have been fitted with straight through or flexible exhaust pipes can make them comply with the law for nothing, as was discovered by H. R. C., of Kilcreggan.

H. R. C. buys Texaco oil in the "easy-pour" half-gallon tins, and in one of these he pierced holes in the bottom so as just to admit the passage of the exhaust pipes. Next a clip of ⅜in. mild steel strip was made to encircle the tin and secure it on to the back stays of frame or other suitable point. The screw-on stopper can be drilled with ⅛in. holes and screwed on tight if the machine is not silent enough, but a big twin has been well silenced without it.



Utilising a Texaco oil tin as a silencer for "straight through" exhaust pipes.

The tin stands the heat and vibration well, we are told, and, given a coat of cylinder black, it improves the appearance of the machine.

INSURANCE PROBLEMS.

A Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

Negligence on the Part of the Insured.

Mr. A. Clark, Retford, asks "whether a company would refuse compensation on the grounds that an accident or loss of property occurred owing to the negligence of the insured."

The wording of most companies' policies is such that they would not be relieved of liability in the event of an accident occurring which is due to the negligence of the insured. It must be remembered that goodwill forms a very prominent part of insurance transactions, and the high reputation of British insurance companies has been founded on this attribute.

* * * *

Riding with an Empty Pillion Seat.

Mr. H. Clarkson, Islington, says: "In connection with my lightweight I have an 'all in' policy. For the convenience of occasional passenger carrying I have fitted a pillion seat, and I appreciate that any accident I may be involved in whilst carrying a passenger the onus would be entirely on my shoulders. I have also been given to understand that the insurance company would repudiate responsibility if I should be mixed up in an accident riding purely solo, merely because I was carrying an empty pillion seat. Surely this is monstrous, and I hope to hear that my informant is wrong."

If your policy has not been specially endorsed to include risk whilst a pillion passenger is being carried, it is obvious that during the time you are carrying a passenger in that way your insurance would not be in force, but your insurance will not be affected in the event of an accident occurring whilst a pillion seat is fitted but a passenger is not being conveyed on same.

* * * *

Renewing an Insurance.

"Mancunian," writing from Stockport, says: "The schedule at the top of the policy reads as follows: 'Value insured, including accessories and sidecar, £175.' Total loss clause of policy reads: 'Up to the insured value of motor cycle.' Agreed value clause reads: 'In the event of a motor cycle insured being totally destroyed or lost by fire, accident, or theft, the insured value will be paid.' The outfit was purchased in 1921 and cost £175, and this was the value insured with the company. I have renewed the policy, and the same value appears in the schedule. Do you consider that the words used are such as to bind the underwriters to pay the full amount named, viz., £175? The wording of the policy appears to be different from the majority."

If the present actual value of your motor cycle and sidecar is considerably less than £175, we doubt whether the clause in your policy to the effect that £175 is payable in the event of a total loss would hold good in a court of law. We think you should raise the point with your insurers, as if the present value is only, say, £100, the premium should be less.

* * * *

Frame Breakage.

Mr. Hubert H. Hooke, Swanage, writes:—'I have a 770 c.c. B.S.A. sidecar outfit fully insured. Last week whilst riding alone to pick up my passenger, and travelling at not more than 6 m.p.h., a young child dashed out from a side road almost into the outfit. I applied brakes and shut throttle and locked motor cycle sharply to right, causing a very severe skid which broke the frame in three places. Fortunately I did not touch child and a more serious accident was avoided by the handle-bar falling over to the left on to the sidecar. The insurance company denies responsibility, as there was no collision, and alleges a weak or faulty frame. Could you kindly advise me?"

There is no doubt whatever that under such circumstances the damage is not such as is covered under the ordinary motor cycle policy.

If the skid had caused the machine to come into contact with the kerb or some other object the breakage would have been understandable, and come within the cover granted by your policy.

ONE DAY TRIAL IN SCOTLAND.

THE one day reliability trial organised by the Scottish Western M.C. took place under exceptionally unfavourable weather conditions when the competition for the James Shield was stronger than ever.

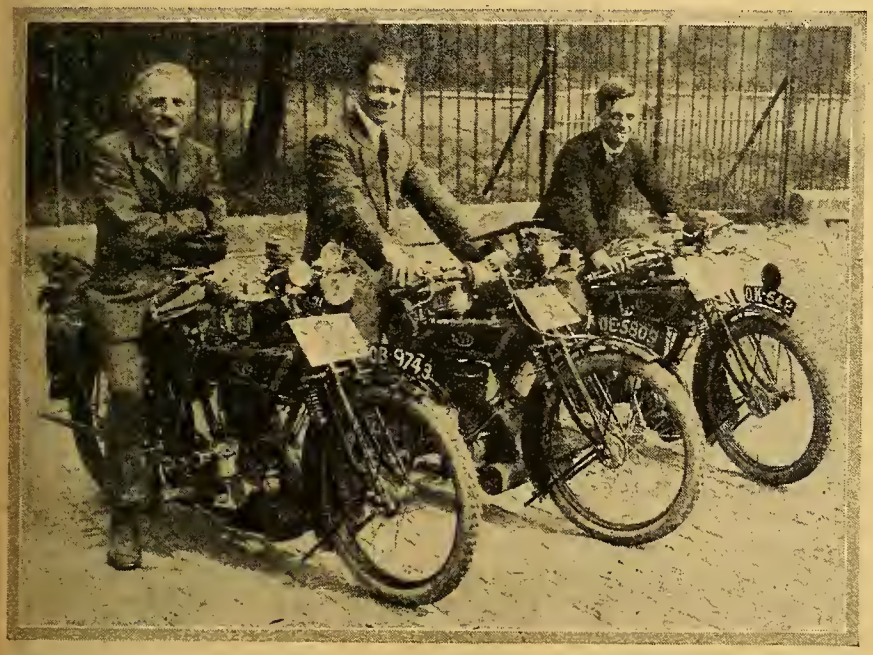
Argyllshire roads are test enough for any motor traffic in the ordinary way, but when the club officials include such roads as the Rest and be Thankful, Glendarnal, Ballochandrain, Hell's Glen and Auld Glennie Mhor, with weather such as experienced recently, it is a trial indeed.

Fylestone was the first observed hill, but proved of little trouble to anybody, and Glen Douglas failed to find any failures, although MacCradie, who was riding a Bradbury, had trouble with his tyres in the non-stop section, and D. Wright, who is the present holder of the shield, was in trouble at the bottom of the Rest with his sidecar connections; and, save up at the flying check at the top of the Rest, almost all of the solo men had time to waste, but most of the sidecar machines had to ride hard to be in time. The exceptions were: Geo. Grinion (989 Harley-Davidson sc.), Mrs. Duncan Bell and B. Brown (799 A.J.S. sc.), and K. Sanderson (976 Brough Superior sc.).

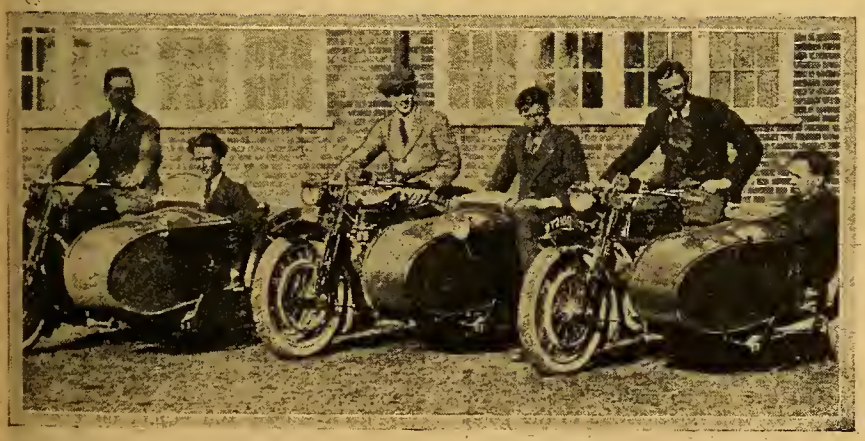
After the lunch check, which was at Strachur, the most difficult part of the route was experienced, and from here to the finish the failures were many—W. Simons turned his outfit over in Hell's Glen. Mrs. Bell, who had been doing well up to Glen Douglas, also came to grief through her lamp falling and fouling the front wheel of her machine.

Of the sixty starters, only about half finished, and the results will show that they have not all got clean sheets.

Members of the O.K.-Junior team, who were awarded the team prize in class B, their total number of marks being 1,447. F. C. North and N. Hall are shown inset in the photograph of their colleague W. Handley, who is seen ascending Portway Hill.



Winners of the team prize in class A. F. W. Applebee, A. R. Edwards and G. S. Davidson who between them gained 1,450 marks.



The P. and M. trio which won class F. Their total number of marks was exactly the same as that of the winning 1,000 c.c. teams. The riders are: R. Lewis, R. Cunningham and G. M. Townsend.

AGGREGATE PERFORMANCES.

Winning a Team Prize in the A.C.U. Six Days Trials.

NEVER has there been such keen competition to win the team prizes as in the recent Six Days Trials.

To secure one of these awards is more than an honour; it is undoubted proof of merit, for, while individual riders may obtain splendid performances, a team of three, nominated before the start of a strenuous six days, has a three to one chance as compared with a single rider.

Only those following the trials and well acquainted with the competitors can obtain a true idea of the anxiety and keenness of the men in the various teams. Before the first day is concluded every team rider knows by heart the numbers of his fellow-competitors in the same class. To see what their rivals have done is the team man's first consideration when notices are posted showing the day's losses in marks—and so it goes on all the week, until on the last day every man knows his team's chances exactly.

This year there were twenty teams competing for five prizes. In Class A (250 c.c.) New Imperial, Levis, and Sun Vitesse teams were nominated, and in Class B (350 c.c.) there were five teams—Raleigh, Allon, A.J.S., O.K.-Junior, and Connaught.

Only Two Teams in 500 c.c. Class.

Class C (500 c.c.) only attracted two teams, but there were four in the 600 c.c. sidecar class and six in the large sidecar group. Unfortunately, there were insufficient entries for team competition in the large solo and the cycle car classes. Sunbeam and Ariel riders competed against each other in Class C; P. and M., Sunbeam, New Hudson, and Rudge in Class F (600 c.c. sidecars); and Martinsyde, B.S.A., Harley-Davidson, A.J.S., Matchless, and Ariel in the big sidecar group.

How close was the competition will be judged from the total number of marks secured by the respective teams. In Class A only three marks separated the winning Levis team from the New Imperial aggregate of 1,447. The O.K.-Junior trio won the Class B prize by a margin of two marks; the Sunbeam riders had an advantage of four over the Ariel men in Class C and in Class G (1,000 c.c. sidecars), the Harley-Davidson and A.J.S. teams actually tied with a score of 1,443 marks each. Third in this contest was the Martinsyde trio with 1,437 marks.

In the 600 c.c. sidecar class the P. and M. team won by an easier margin, securing 1,443 against the Sunbeam sidecars' 1,419.

The marks lost and gained by the riders in the Levis and New Imperial teams were given in last week's issue. From the tabular results published one finds that the three New Imperial riders lost twenty-

Aggregate Performances.—

eight marks on time. This was due to an error on the first day of the trial, when, after negotiating very difficult country, the riders overlooked the 15 m.p.h schedule speed and arrived at a check too early, and were therefore penalized twenty-eight marks. The only other marks lost were on silence, where everybody was penalised. Horton and J. Wilkins, who, with B. Kershaw, formed the team, were awarded bonus marks on hills, and all three secured bonus marks in the speed test. Since only three marks divided the two teams, it is obvious that the New Imperial lost the prize entirely through being too early at a check.

The Levis team performance was consistently good. The riders were G. S. Davison, A. R. Edwards, and F. W. Applebee. None secured bonus marks on hills; in fact, the last-mentioned of the trio lost ten marks. They each lost four marks, against the New Imperials' three, on silence. In the speed test they secured thirty-two marks, against the New Imperial score of thirty-three.

Won on "Condition."

The total score of the 350 c.c. team winners—the O.K.-Junior—was lower, by three, than that of the 250 c.c. Levis team. Here, again, the results were very close, the O.K. team scoring 1,447 and the A.J.S. 1,445. The riders were: A.J.S.: E. W. Choldcroft, H. F. Harris, and C. W. Hough; and O.K.-Junior: F. C. North, N. Hall, and W. Handley. None of them lost marks on time, and on hills two of the O.K. riders (F. C. North and W. Handley) secured bonus marks, while E. W. Choldcroft (A.J.S.) lost five marks under this heading. On silence the O.K. riders were also one up over their competitors on the A.J.S. Thus before the speed test and examination the O.K. team was leading by three points. Considering that the A.J.S. machine is a stable companion of the famous T.T. winners, it is not probable that the O.K. two-stroke riders hoped to maintain their advantage after the speed test, and it may be mentioned that had the speed test only decided the results the A.J.S. team would have won. The A.C.U. officials are wise, however, and debit marks on condition, and this is where the O.K.-Junior scored. On speed no less than twenty-eight bonus marks were secured by the A.J.S. riders against nine of the O.K. men, but on condition the former team lost ten marks against five of the O.K. Thus it will be seen that the O.K. team won on condition. The two-stroke engines fitted were of 16.3% smaller capacity than the four-stroke engines of the Wolverhampton machines.

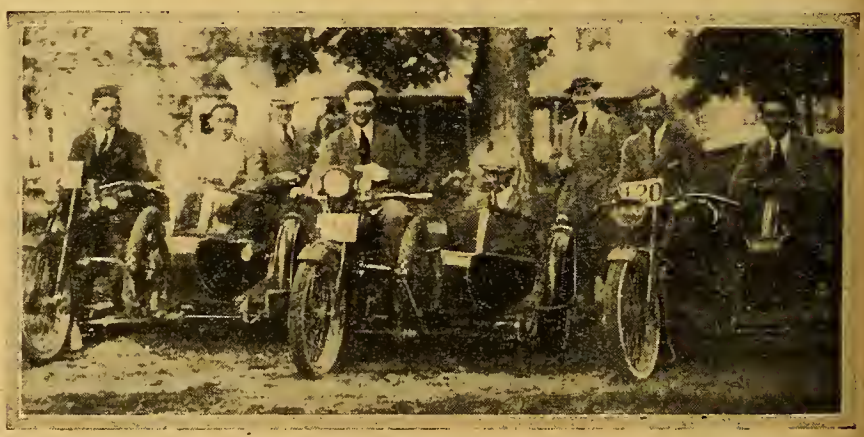
500 c.c. Solo Class.

Next comes the Sunbeam-Ariel contest in Class C. The Sunbeam riders were G. Dance, A. Bennett, and C. Greenwood, the two first-mentioned, at least, men with international reputations. Representing the Ariel were A. Rollason, F. A. Longman, and W. T. Woodcock, all riders long experienced in trials riding. On hills the Sunbeam men secured ten bonus marks against the Ariel riders' fifteen, neither team losing any on time. Dance and Bennett each lost two marks on brakes, and all three of the Ariel riders also lost two marks each. This left the Ariel team with three marks to the good. The silence test penalised the Sunbeam men five marks each—total fifteen—compared with their opponents' total of thirteen, so the Ariel had still a lead of five marks before the speed test and examination.

Dance averaged 52.3 m.p.h. on Brooklands, Bennett 49.9 m.p.h., and Greenwood 48 m.p.h. The Ariel riders were not so fast on the whole, although Wood-

With a total number of 1,458 marks the above Sunbeam riders were awarded the team prize in Class C. Inset are A. Bennett and G. Dance. C. Greenwood is shown making the ascent of Mow Cop.

Besides tieing with the Harley-Davidson team in class G, one member of the A.J.S. team F. W. Giles (on left) won the Centre Premiership. In the centre H Poole, on the right O. Wade.



Equalling the A.J.S. aggregate, the Harley-Davidson riders share the honour of winning Class G. From left to right: T. R. Allchin, G. Baxter and C. W. Johnson.

Aggregate Performances.—

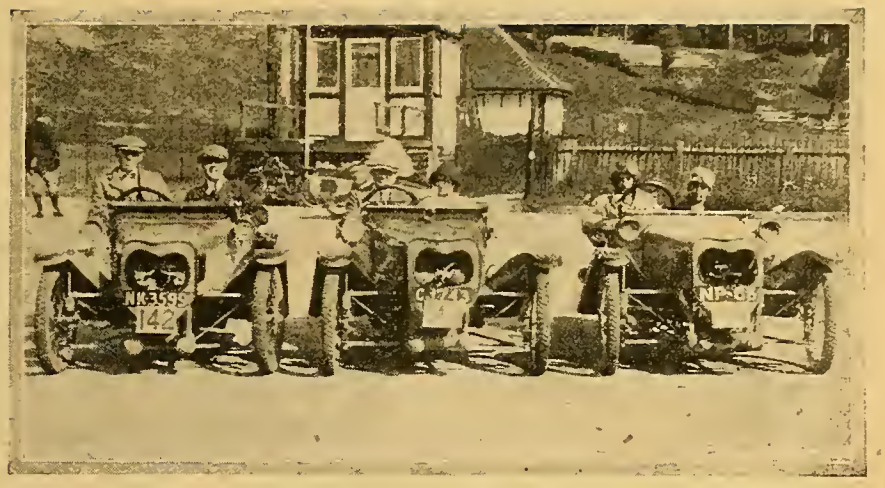
cock averaged 48 m.p.h. and his colleagues 46.3 and 44.2 respectively. The Sunbeam total bonus on speed was twenty-nine, against the Ariel's score of eighteen, and on condition the Sunbeams lost two, while the Ariels came through the examination without loss of a mark. Thus the Sunbeam team won by the narrow margin of four marks by the bonus marks gained by Dance's speed, which were more than enough to wipe out the Ariels' lead of five marks and the loss of two on condition.

600 c.c. Sidecars.

In the medium-sized sidecar class the contest was between P. and M. and Sunbeam. The New Hudsons had lost one of their team before reaching Brooklands and the Rudge team had suffered misfortunes during the week. The P. and M.'s had engines of 555 c.c. against the 599 c.c. of the Sunbeams, and the riders were :—P. and M. : P. Cunningham, L. Lewis, and G. M. Townsend; Sunbeam : T. C. de la Hay, P. W. Bischoff, and R. Brown. None of the six riders lost marks on time, but on hills the P. and M. four-speed machines secured ten bonus marks and the Sunbeams lost twenty. This gave a lead of thirty marks to the Cleckheaton production. On brakes all but T. C. de la Hay lost two marks, which test brought the P. and M. gain down to twenty-eight. The silence test penalised the P. and M.'s fourteen, against eight of the Sunbeam, reducing the P. and M. gain to twenty-two. On examination none of the six riders were penalised, thus it was left for the speed test to decide the winner, although it is fairly obvious that the P. and M.'s would have had to be very slow indeed and the Sunbeams very fast for the latter to gain an advantage. There was just the chance that a P. and M. would fall out during the twenty-five laps. But it did not, in fact, two of the P. and M.'s were faster than any of their opponents in the other team, and the total bonus marks on speed for the respective teams were : P. and M., thirteen, Sunbeam eleven; thus the P. and M. riders actually increased their advantage, winning the Class F team prize by twenty-four points.

1,000 c.c. Sidecars.

In the big sidecar class competition was closest between the Harley-Davidson, the A.J.S., and the Martinsyde teams. The riders were :—Martinsyde : A. A. Symes, J. T. Bashall, and W. H. Bashall; Harley-Davidson : G. Baxter, T. R. Allchin, and



Although having no team competitors, the three Morgans made a splendid aggregate performance in the Six Days Trials. From left to right are: S. Hall (1096 Morgan-M.A.G.), H. F. S. Morgan (978 Morgan-Jap) and W. Carr (1090 Morgan-Anzani); all secured gold medals with a surplus of marks.

C. W. Johnston; A.J.S. : F. W. Giles, H. Poole, and O. Wade. No member of the three teams lost marks on time; one of the A.J.S. riders lost five marks on hills, but the other two (Giles and Wade) gained ten bonus marks and one of the Harley riders (T. R. Allchin) gained five. Thus these two teams were level with an advantage of five over the Martinsydes. On the brake test the Martinsydes lost a total of six, against ten of the Harley-Davidsons. The A.J.S. lost no marks, and therefore had an advantage over the Harley-Davidson team of ten, and over the Martinsydes of eleven. The last-mentioned team lost a further fifteen marks on silence and the Harley-Davidsons a further thirteen, while the A.J.S. team scored in this test, its only loss being seven marks. Thus before the speed test and final examination the Martinsydes were twenty-one on the wrong side of the 450 credited at the start, the Harley-Davidsons were eighteen down and the A.J.S. two. It will be seen that the A.J.S. had a lead of sixteen over the Harley-Davidson trio. It remained for the speed test to decide the issue for all that, for neither team lost any marks on condition, although the Martinsydes were debited with a further two. The Harley-Davidsons averaged 50.9, 42.7, and 36.7 m.p.h. respectively scoring twenty-one marks, against the A.J.S. total of three. This low total bonus was due to losses by one of the team. F. W. Giles put up a wonderful ride at 50.9 m.p.h. with a touring sidecar, and his bonus was twelve, but O. Wade lost eleven in the speed test and Poole secured four. Thus the Harley-Davidsons regained the eighteen marks previously lost and secured three marks in addition. The A.J.S. team, by Wade's losses, came near to losing honours. They were two down before the speed test, and Wade's loss of eleven brought this to thirteen. Giles gained twelve bonus marks and Poole four, between them making up for Wade's deficit, and bringing their total to the same as that of the Harley team, viz., 1,443 marks.

Although there was no competition, and, therefore, no team prize in the 1,100 c.c. cycle car class, the trio of three Morgans, driven by W. Carr, H. F. S. Morgan, and S. Hall, calls for special comment, since it gained a bonus total of thirty-two marks, being thus twenty-nine marks ahead of any other passenger team and topping the best solo team by fourteen marks.

Special credit is due to the men and machines securing the team prizes, for readers on perusing the above will appreciate that in no case were results due to luck. Reliability, hill climbing, speed, and condition all played their part, together with that expert riding which is so important in competitions.

MODERN HIGH DUTY VALVES.

THOSE of the old school of riders will remember the troubles which occurred in early days owing to defective valves, partly due to poor design, and partly due to defective material.

Gradually, however, improved materials and more scientific designs eliminated valve troubles till they became the exception rather than the rule in touring engines, but the fear of breakage remained and it has been the main cause of the comparatively slow development of overhead valve units. Even nowadays trouble is not unknown

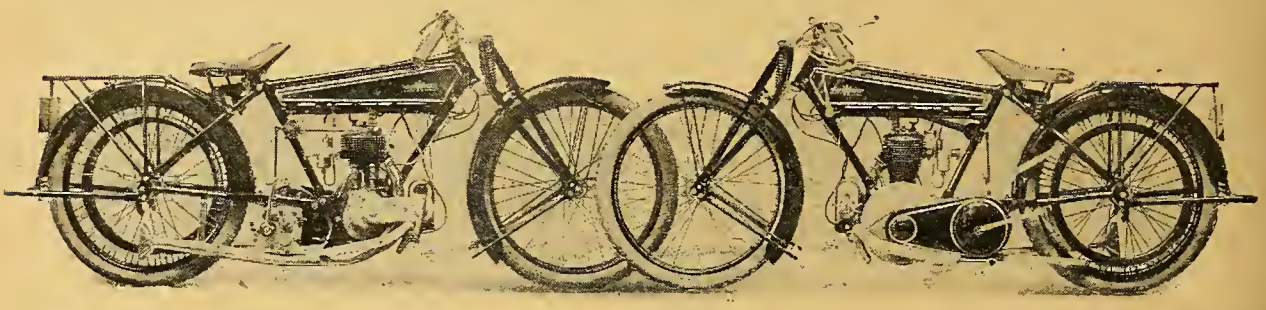
During the course of the war the introduction of high efficiency engines, especially for aircraft work, produced an urgent necessity for really reliable valves, and research in this direction has enabled enormous improvements to be made till at the present day it is possible to construct a valve which is to all intents and purposes unbreakable, and which will stand prolonged use without the necessity of regrinding. There are now several firms which specialise in the manufacture of valves, and amongst these the Celerity High Duty Valve Co., of 113, Kingston Road, Staines, Middlesex, has had wonderful successes both on road and track.

We know of several racing motor cyclists who have succeeded in eliminating valve trouble by fitting Celerity valves, and we have ourselves had most satisfactory results with them in a particularly hot running engine.

An almost entire absence of pitting is a very noticeable feature of the steel from which these valves are made, and the confidence of the manufacturers is exemplified by their guarantee to replace free of charge any valve which breaks or burns.

A FRENCH 500 c.c. SINGLE.

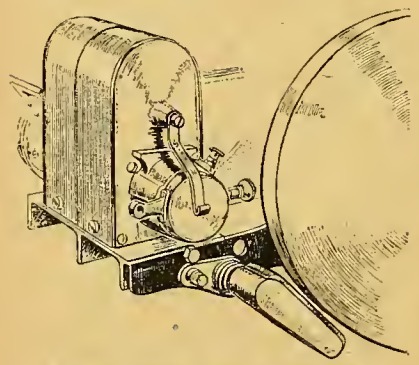
Big Output Foreshadowed of new Gnome and Rhône Three-speed Outside Flywheel Double Purpose Machine.



Of trim and symmetrical appearance, the 499 c.c. Gnome and Rhône as seen from both the valve and flywheel side. In future models a silencer will be fitted.

MAINLY following standard lines, but possessing several attractive features, the Gnome and Rhône is about to appear in the British market. This machine was first described in our report of the Paris Show last year, but since that date it has undergone a good many improvements.

Though of French construction, being built at the famous Gnome and Rhône



Splitdorf magneto and flywheel brake.

works which turned out 30,000 aeroplane engines during the war, the 499 c.c. Gnome and Rhône was designed by an Englishman, Mr. K. Bartlett, who has distinguished himself in French competitions on both this machine and the A.B.C. (which is also the company's production). He competed in the *Tour de France* of 2,300 miles on the machine under review without the loss of a single mark.

Designed for Cool Running.

A 499 c.c. single-cylinder air-cooled engine, of 85 × 88 mm. bore and stroke, with outside flywheel, provides the motive power. The whole of the interior of the cylinder is machined, and the radiating fins are especially deep, particularly round the exhaust port, while there is an ample air passage round the valve chest. There are no separate valve guides, these being cast integrally with the cylinder.

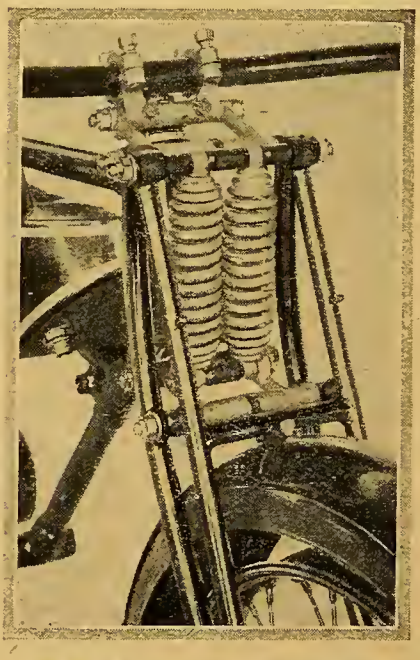
In the timing gear a single camshaft is employed; double roller bearings are provided to the connecting rod, and there is a double row ball bearing for the main shaft on the transmission side.

It is worthy of mention that the method of securing the gudgeon pin by means of two spring rings fitted in grooves in the latter and engaging with corresponding grooves in the piston boss renders it safe and yet easy to detach.

Easy Starting Air Strangler.

Mixture is supplied by a simple single lever Gnome and Rhône carburetter provided with a strangler to the main air intake, thus ensuring easy starting under all conditions. The air inlet is cone-shaped, and is carried well to the rear of the carburetter.

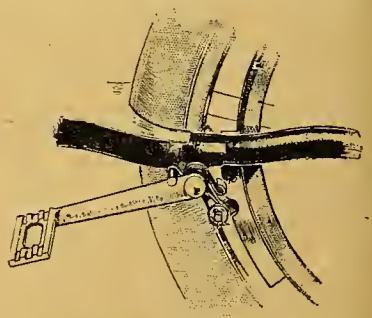
Transmission is by chain and belt, a Sturmey-Archer three-speed gear box being employed. The primary drive is "outside" the flywheel and is enclosed in a sheet metal case.



The spring forks of the Gnome and Rhône, the links of which are steel drop forgings.

Two Foot-controlled Brakes.

Originality is shown in the design of the brakes. One of these, of the direct-acting variety, is controlled by the rider's left heel, and consists of a large shoe applied to the belt rim, while the other is actuated by the rider's toe, and is



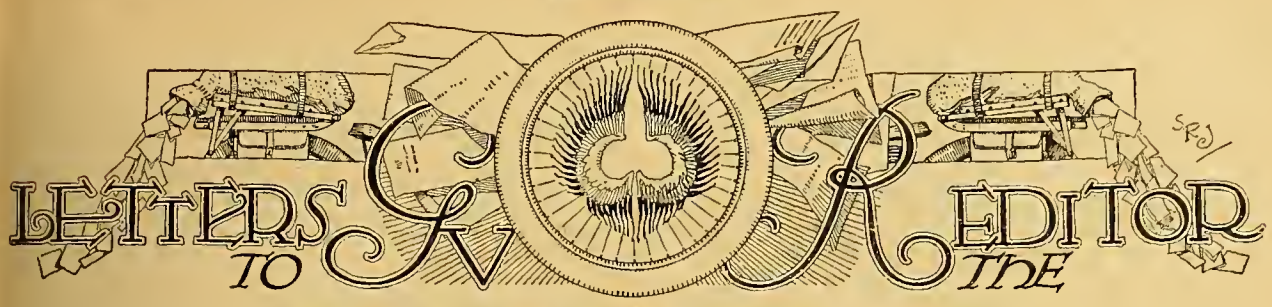
Simply-designed rear wheel brake.

applied directly to the periphery of the flywheel, the pedal being on the offside footboard. Good spring forks are employed, and caps are provided to keep wet and grit from the hubs.

In the first model seen over here the magneto is controlled by a lever on the tank, but in future models this will be handlebar-controlled. It is interesting to note that all control wires are concealed and pass through the handlebars, and that sidecar lugs are incorporated in the frame.

Extensive Production Programme.

The Gnome and Rhône is to be made on mass production lines, 10,000 machines being suggested for next year and 20,000 the year after; the first batch is practically ready for delivery. It is hoped to produce the machine at an extremely moderate price. English concessionnaires have not yet been appointed, but the export of the machine is handled by Overseas Sales, Ltd., 21, George Street, Hanover Square, London, W.1.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

COSTS OF A CONTINENTAL HOLIDAY.

Sir,—I have read in your columns the correspondence respecting the cost of a holiday with a motor cycle. I have just returned from a fortnight's trip in Western France, and perhaps a few details of my expenses may be of interest to your readers.

I live some twenty miles from Southampton, so it was convenient to cross from that town. I paid 63s. 5d. for a first-class return ticket to Cherbourg, and my machine cost 7s. 11d. each way. I avoided the expensive coast-town hotels, but usually went to the best hotel in each place. I find the average charge per day for dinner, usually of soup, fish, meat, vegetables, fruit and cheese with cider, bed, breakfast, consisting of coffee with rolls and butter, works out 19 francs 30 centimes, or, at an exchange of 55 francs to the £, about 7s. 4d. My lunch, on similar lines to the dinner, would average 8 francs 50 centimes, or 3s. 2d. Tips are not included. So the tourist can get along quite well at about 13s. per day. Of course, fashionable seaside towns must be avoided unless one is prepared to double expenditure. There are, however, plenty of small towns in Normandy and Brittany where the tourist can do himself very well at an extremely modest cost.

The price of petrol varies in the different districts, but 9 francs per can of 5 litres is about the average. This is, roughly, 3s. per gallon.

A *permit de circulation* available for three months costs 2 francs. It is obtained without formalities at the Customs House at the port of debarkation on exhibition of the tourist's return ticket to England.

The roads in Western France are of varying quality; the worst are the main roads running to Paris. If the secondary roads are chosen a good surface is generally found.

Isle of Wight. SAFETY FIRST.

FUEL CONSUMPTION OF TWO-STROKES.

Sir,—As an Allon rider I was much interested and surprised at the letter of "Nolla Syadlla."

My machine is a 1919 model, and with the carburetter fitted by the makers I could not get more than 50 m.p.g.; so I fitted a Binks and using 00, 0, and 7 jets average about 70 m.p.g. Your correspondent's statement that he was doing 112 m.p.g., which was afterwards increased to 132 m.p.g., by the use of "Fam-O," has fairly taken my breath away; I should like to hear how he attained even the former result—type of carburetter fitted, speed that he runs at, etc.

Upton-on-Severn. OLD BILL.

SILENCE!

Sir,—In view of the recent campaign against noisy motor cycles at Brooklands, I feel I must let you know the result of a few experiments I have recently carried out with considerable success. All that is necessary is to procure a selection of camphor balls in sizes varying from 1-2 cms. in diameter. These may be purchased from any chemist. A small quantity of permanganate of potash is also required. Dissolve 20 grains of the latter in 2 ozs. of water, and then grasping one of the balls in a pair of pliers immerse it in the aforementioned solution for 10 seconds. The ball should now resemble a fully ripe grape. My experience is that best results are obtained with 1 cm. balls for 500 c.c. machines, 1½ cms. for 750 c.c., and 2 cms. for big twins. I have not experimented in the 350 c.c. class yet, but assume that 0.75 cm. would be roughly correct.

All that is now necessary is to place the treated ball in the expansion chamber or fishtail. The results are quite amazing. My machine is a Norton, the flywheel of which has a decided tendency to revolve quickly, but on treating my fishtail as described above all that was audible was the pleasant "zipp" of the tyres as they sped me along.

I have used this method during my racing this season at Brooklands, and I am sure that all those who happen to know me at that delightful spot will agree that my machine was easily the quietest on the track, even though it was fitted with a "mouse-trap" carburetter. This was doubtless due to the natural repulsion that a mouse bears towards camphor.

The blue smoke caused by the permanganate has the effect of making the gentleman who is about to overtake you imagine that your plug is about to soot up, and he consequently closes down thinking he has you cold. This one property gave me three races. Other advantages are more m.p.h., 100 per cent. more m.p.g., lubricating oil not required, no tyre wear, greater riding comfort, safety from seizure (both mechanical and lawful), etc., etc. It is not on the market yet, but is sure to be before long! LIEUT. R. T. GROGAN, R.N.

INSIDE VERSUS *OUTSIDE FLYWHEELS.*

Sir,—Recently I was an interested observer of an argument relative to inside and outside flywheels. According to points scored by the party in favour of outside flywheels it would appear that this arrangement was all that could be desired. If this is so, I am curious to know why it should not be adopted by manufacturers of such machines as the A.J.S., Triumph, Sunbeam, Norton, etc., all of whom specialise in inside flywheels, and, incidentally, have turned out several winners in various races.

I would like to put a few questions on the subject:—

What actual advantage has an outside flywheel over an inside?

Is crankcase compression minimised at all in the outside flywheel type?

Does oil drag on the inside wheel type count for anything at high speeds?

Is any advantage gained in the outside type by having a large diameter wheel for the same weight, and consequently a higher peripheral speed? G. WALLER.

VALVES THAT CONTRACT WHEN HOT.

Sir,—I have noticed in my 550 c.c. Triumph that with the engine thoroughly hot the gaps between the valve stems and tappets are wider than when cold.

Careful measurement, however, proved this to be due to the expansion of the cylinder and crank case being greater than the valve stems, and so giving the impression that the valves had contracted. The tappets being to some extent insulated from the rest of the engine would remain cool and scarcely expand at all.

I rather think that if those whose valves apparently contract on being heated were carefully to caliper the length when cold, and then bring to a working heat in a gas flame, they would find a considerable expansion.

H. W. BAKER.

WHERE CAN SIDECARS BE IMPROVED?

Sir,—The greatest improvement in sidecars—incorporating all and more than your correspondents desire—is the Scott Sociable. It is surprising that this fascinating little vehicle is not more widely known and appreciated among sidecarists, so completely does it overcome the inherent drawbacks of the sidecar outfit without corresponding disadvantage or increased running costs. It is essentially to sidecarists that it makes appeal, and in particular to those who wish at times to carry three aboard, in reasonable comfort. My fellow motor cyclists will appreciate the point when I recall the weather conditions of August Bank Holiday Sunday. I was on the road most of that day in company with my wife and daughter, and we blessed "Scottie." My interest is that of one who enjoys and appreciates the brainiest little "'bus" on the road. TWO-STROKE.

Newbury.

TEMPERAMENTAL ENGINES.

Sir,—The sometimes fertile mind of "Ixion" has been concentrated, I believe, upon a question which has puzzled a good many readers of your admirable journal, and, in my humble opinion, he has *unwittingly* solved the problem. I must admit that it was his journalistic flair, and not his mechanical ability that was responsible. Merely his happy choice of words.

I refer to the temperamental Rudge. "Ixion's" words were "Super Rudging." Super! That is the key to the whole question. I possess an I.O.M. Rudge. Sometimes it is below par. Sometimes it Rudges. Sometimes it super Rudges. All within a space of a few miles.

The Rudge is the only machine, I believe, which is identical with the T.T. model in every respect. Even to the separate oil tank clipped to the down tube. The air intake almost touches the centre of a broad plane surface, the oil tank, to wit. Sometimes the wind strikes this surface, shoots across, and pumps out the mixture. My Rudge is below par. Anon, a position of equilibrium is reached. My engine Rudges. Again, the wind veers round, relatively to the machine; I get forced induction owing to the ricochetting effect, and I super Rudge.

Some of the Brooklands people have noticed that oil tanks in similar positions have most peculiar effects on the induction system.

This is the only reason which satisfactorily accounts for the undoubtedly temperamental running of my Rudge. Perhaps some other Rudge riders will investigate on the same lines. I.O.M.

Stockport.

HUB LUBRICATION.

Sir,—We are interested to see a friendly reference to our hub lubricant in *The Motor Cycle*. We venture to point out, however, that we have two grades of this material, and that the "stiff" is the one specially adapted for hubs, fork spindles, and steering heads. The soft grade, on the other hand, is most suitable, and is widely used, for motor-cycle gear boxes, such as the Sturmey-Archer, Indian, and Clyno.

If by any chance a motor cyclist uses soft hub lubricant for the hubs, he may expect, except in cold weather, to be troubled with leakage from the ends, which makes a nasty mess on the tyres, for which we may be blamed, although unfairly. PRICES' COMPANY, LTD.

SOLDERED BOWDEN NIPPLES.

Sir,—Probably the chief reason why Bowden cables snap so readily at the soldered nipple is that the acid soldering fluxes one sees so regularly used rapidly eat away the strands. After using acid flux (such as Baker's mixture) one should give the part a thorough washing with water, and then smear with oil.

But much better would it be if every motor cyclist knew and used Blake's Tube Flux, which is an ideally prepared composition for non-corrosive soldering, in a particularly convenient type of tube. It is obtainable from Messrs. Mosses and Mitchell, Chiswell Works, 122-4, Golden Lane, London, E.C.1, at 1s. tube, and for all sorts of soldering jobs incidental to motor cycling the writer is glad to have made its acquaintance. CHARLES REID.

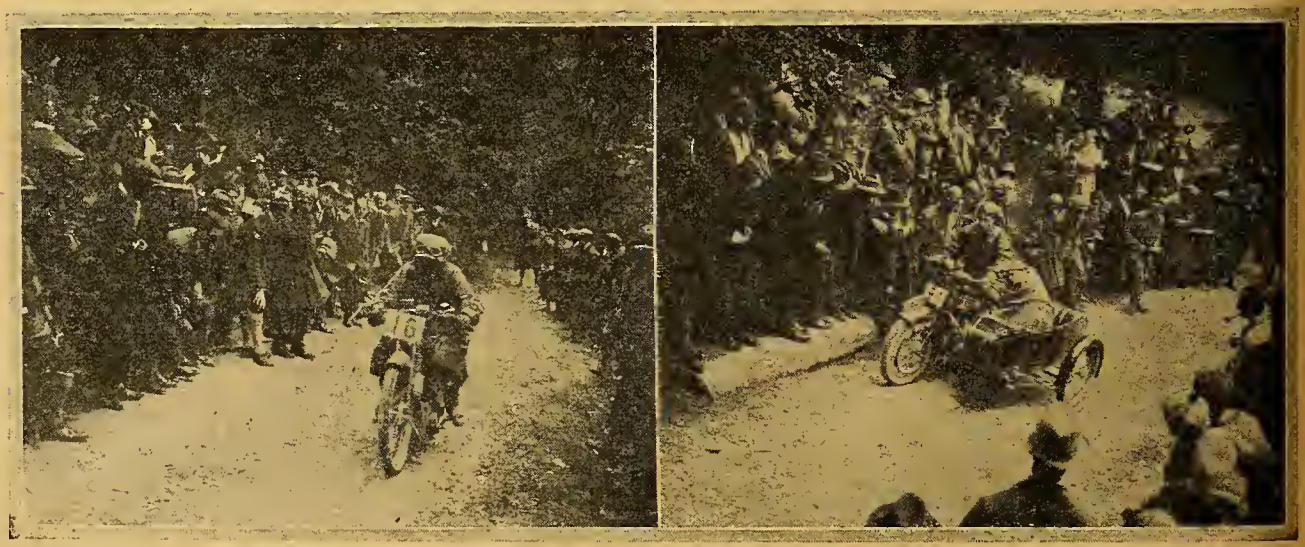
CHAR-A-BANCS ON NARROW ROADS.

Sir,—After the dreadful accident recently on the Romney Marshes, is it not clear that regulations should be put into force with regard to the routes along which char-à-bancs may be allowed to travel and as to their speed?

I have driven a medium-powered sidecar outfit along this same road some eight or ten times during the past fortnight, and feel sure I am only voicing the opinion of all who have also traversed this route when I assert that it, together with many others, is totally unfit for char-à-banc traffic.

From my own personal observation I can state that, at the spot where the accident occurred, there is barely room for two ordinary cars to pass one another without one or both going on to the grass. What chance, then, has larger traffic of doing so in safety?

Such routes, I maintain, should be absolutely barred to char-à-bancs, not only on account of the danger mentioned,



Keen interest in the climbing was shown by spectators on Alms Hill, the last severe test hill in the Six Days Trials.

Mrs. O. M. Knowles (349 A.J.S.) whose riding was applauded on many hills. She was awarded a gold medal.

P. Pehrson (499 Dunelt sidecar) making a clean ascent of the hill. He also gained a gold medal.

but also on account of the damage admittedly done to roads which were never constructed for, nor intended to be used by, such heavy and fast vehicles.

The proper place for char-à-bancs is on the great highways and on them alone, and surely under no circumstances whatever should they be allowed to exceed a speed of 15 miles per hour. Many at present exceed 20.

I am far from wishing to curtail in the slightest degree the pleasure of the many, but for their own safety, as well as the safety of other users of the road, something ought to be done. Surely the drivers themselves would prefer the wider thoroughfares.

In conclusion, I should like to put in a word for these drivers. As a rule, they are very clever and show much consideration for those who are manipulating smaller craft.

Sussex. TOURIST.

GOGGLES FOR THE SPECTACLED RIDER.

Sir,—Having to wear spectacles I take care to choose a pair of goggles which will fit comfortably over them, and the particular pair I have at present have curved glasses. I do not suffer any of the inconveniences stated by your correspondents up to date, but find that when I take the goggles off there is quite a difficulty in focussing my eyes; I can see perfectly well with the goggles on, but as soon as I take them off it is just as though I were looking through someone else's glasses, and it is a matter of some 30-50 seconds before I can see properly. AWAHAWAHAWOO.

N. Devon.

CANCELLED COMPETITIONS.

Sir,—I am writing to deplore the growing habit of motor cycle clubs postponing or cancelling competitions at the last moment through insufficient entries. I engage in a certain amount of competition work, and three times in the last few weeks events have been cancelled at the last moment.

Not only does the procedure give the club a bad name, but it is most annoying after having prepared a machine specially for an event, and made arrangements for a day's absence, to receive a letter the night before stating that the event is cancelled. Occasionally, too, I have the option of entering more than one event on a given day, and the cancellation notices always arrive too late to enable me to enter for anything else.

Apparently clubs will not run events unless they are assured of being financially on the right side, but would it not be a better policy to run an event, however few entries, and if a loss be incurred, to avoid an event of that nature in future? One club of which I am a member recently carried through an event with only six entries, but surely that is the right spirit, and at least shows consideration for the entrants. The club is one of those that I *shall* rejoin next year, but I will think seriously before rejoining those which continuously cancel or postpone events.

E. C. GORDON.

A NARROW ESCAPE.

Sir,—Possibly the enclosed may interest your readers. It reminds me of a very narrow escape. When passing through the New Forest recently on a motor cycle and sidecar, I felt a sudden jar, but, thinking perhaps I had dropped into a pot hole, I did not trouble to stop; however, on arrival at Gosport, I found that one of the back stays of the motor cycle had been broken, but did not then know it had been pierced by a bullet which was discovered on my visit to the garage to have the stay repaired.

The bullet (actual size) which damaged Mr. Kempton's machine whilst riding in the New Forest.

GEORGE KEMPTON.

TOO INDEPENDENT BUSINESS METHODS.

Sir,—A friend of mine desired to buy one of the best known of our three wheelers, and wished to have a body to his own design. On enquiring as to the price of the chassis he was informed that only the complete machine was sold.

Could any policy be more idiotic and shortsighted? Had the gentleman in question been in need of a large car, a chassis of course would have been listed as a regular thing, but, as the requirements only amounted to a three-wheeler—oh, no!

As a result, my friend (who is determined to have his own design of body) will have to scrap the standard body and substitute the other. L. W. G. HARTLEY.

HOT WEATHER LUBRICATION.

Sir,—"Ulysses" complains of the mechanical oiling system of the 595 c.c. Douglas in a hot climate.

I experienced the same trouble in this country in the hot weather of last summer, also suffering a partial seizure until I tried Castrol X.L. oil. As soon as this oil was in the sump the trouble disappeared and has never recurred.

I take it that "Ulysses" has tried the effect of lessening the tension on the control spring of the pump.

LESLIE EVELEIGH.

ON A SINGLE-GEARED TWO-STROKE.

Sir,—As I enjoy the main item on Thursday's breakfast menu, I notice friend "Ixion" comments on the number of Levises upon the road "doing the knots." I recently went from here (Croydon) to Lytham, Lancs., *via* St. Albans, Coventry, Lichfield, Stafford, Tarporley, Warrington, Ormskirk, in exactly 12 hours running time (roughly 250 miles). This was my first long ride, and my mount was a single-gear 211 c.c. Levis (5¾ to 1 gear).

Croydon. LITTLE MARVEL OWNER.

GEAR RATIOS FOR A SCOTT SQUIRREL.

Sir,—Mr. E. Hodgkinson asks for information regarding the most suitable gear ratios for the Scott-Squirrel. It is hard to better those provided by the makers, *i.e.*, 3.75 and 5.4, for the top and bottom respectively. With these gears the machine will do everything short of climbing the most extreme of freak hills. The 5.4 to 1 gear will take the machine up a 1 in 3 gradient, and it is also ideal for traffic riding. On the other hand, it is not easy to get a smooth start on a steep hill.

I should not advise altering the ratio between top and bottom gears by changing the low gear sprocket. There is no need for a much lower bottom gear, and any alteration can be made by merely changing the driving sprocket. This of course affects the high gear as well.

In my own case I obtained a definite and immediate increase of 6 m.p.h. maximum speed on top by substituting a 20-tooth for the 22-tooth driving sprocket supplied, *i.e.*, by slightly lowering the gears; but this may not apply to every machine.

If Mr. Hodgkinson is about to order a Squirrel, I should advise the standard gears of 3.75 and 5.4. He can alter them later if he so desires.

The top gear will take him up most main road hills at 50 m.p.h., and when he sees many riders of four-stroke machines, whose top gear is lower than his low, changing down on hills up which he can hum on top, he will bless the day on which he bought a Squirrel.

N. WILLIAMS.

Sir,—In reply to Mr. E. Hodgkinson's query regarding the ideal gear ratios for the Scott-Squirrel, I think he will find the usual top gear perfectly satisfactory, but I would recommend him to have the 6.9 low gear. Last year I ran a Squirrel for six months, and won several medals at both speed and reliability trials, using the 6.9 low gear, and found it sufficiently low to climb all the rough-surfaced freak hills we had to climb, and also could get about 40 m.p.h. on it. My new Squirrel has the 5.4 low gear ratio, and although it is simply astonishing how well it pulls on this gear (I occasionally fit a Scott sporting sidecar on it), I really think the 6.9 would be the better of the two for anyone who has not had previous experience with this model. WATER-COOLED.

Cardiff.

EASY PAYMENTS.

Sir,—I recently had occasion to ask a large corporation what their terms were for certain household fitments if supplied on the "hire-purchase" system. They told me they charged five per cent. interest for monthly payments spread over three years. They arrived at the monthly payment by adding fifteen per cent. to the principal and dividing the sum by 36. They were a little surprised when I told them that, as a matter of fairly elementary mathematics, they were charging, approximately, twelve per cent. per annum for the accommodation.

This led me to inquire into the actual rates of interest charged for "easy payments" in various trades. It may interest your readers to know that the rate charged by the majority of motor cycle factors lies between ten and twelve per cent. I will give two instances:—Firm A adds 10 per cent. to the cash price, requires a deposit of a quarter of the sum, and payment of the remaining three-quarters in 24 equal monthly instalments. The rate of interest is about 12 per cent. Firm B requires a deposit of ten per cent. of the cash price, and either twelve monthly payments of 79/1200ths of the cash price, or eighteen of 9/200ths. In each case the actual rate of interest charged is about 11 per cent.

These rates may not be excessive, taking everything into consideration, but it is as well that prospective purchasers should know what they really are paying when they accept these terms. The methods of calculation will be found in Chambers's "Mathematical Tables" (in the "Explanation" at the beginning). H. G. LE MESURIER, Lt.-Col.

CAPACITY HANDICAPS IN THE SIX DAYS TRIALS.

Sir,—A glance through the entries in Class B in the Six Days Trials will show you that three houses competed in this class (which is for machines up to 350 c.c.) with engines of less than 300 c.c. It is obvious that the A.C.U. cannot make a class for every manufacturer's cubic capacity, but we do think it is only fair that the small engines giving away some 57-60 c.c. in a class should be given a handicap, and we suggest that for the next trials 5 marks for every 10 c.c. should be allotted to those whose engines are below the maximum capacity of that class.

The O.K. Junior engines are of 292 c.c., as also were the Allons and one Connaught.

HUMPHRIES & DAWES, LTD.
(E. H. Humphries.)

THREE-WHEELERS IN THE SIX DAYS TRIALS.

Sir,—An account of the performance of cycle cars in the A.C.U. Six Days Trials, the premier competition of the year, may be of interest to those who wish to compare the performance of various types of passenger machines.

Cycle cars first competed in 1912, when there were five entries (three four-wheelers). Two Enfields, a Morgan, and a G.W.K. obtained gold medals, an A.C. a bronze. In 1913 there were twelve entries (nine four-wheelers). The awards were a gold for a Morgan and a G.W.K. and a silver for a J.B.S.

In 1914 thirteen cycle cars competed (seven four-wheelers). A Calthorpe and a Morgan obtained golds, a Morgan, J.B.S., and A.C. bronze medals.

The next Six Days Trials were held in 1919 and four-wheelers were excluded; there were six entries, but only three awards were made, a gold, a silver, and a bronze, all to Morgans.

In 1920 there were five entries, and Morgans obtained three golds.

In 1921 four-wheelers were again included, but there were only six entries: three Morgans, two G.N.s, and a T.B.; all obtained golds—a quite unique triumph for the cycle cars engaged, but it does not seem to have encouraged the rest.

This year there were again six entries: three Morgans, a T.B., a Scott Sociable, and an L.S.D. The four first obtained golds; the Scott finished the course.

While the number of cycle car entries has decreased, the number of sidecar entries has increased by leaps and bounds. In 1912 there were only six sidecar entries, this year there were 56. On the other hand, the percentage of golds in 1912 was 100 per cent., in 1922 less than 50 per cent.

It would seem therefore that, although the cycle cars which have been entered have of late obtained a better percentage of success than the sidecars, the number of cycle cars competing has been so small (the successful cars being limited to the Morgan, T.B., and G.N.) that the position of the sidecar is not challenged. The heavier and more expensive light car at present hardly comes into competition with the sidecar; it appeals to another class of driver. Until the numerous makers of cycle cars take their courage in both hands and compete with the sidecar, the popularity of the latter is not seriously threatened, though the popularity of the successful cycle car is assured.

H. GEORGE MORGAN.

SIX DAYS TRIALS MARKING.

Sir,—My object in writing to you is to call your attention to the grossly unfair way the awards have been arrived at in connection with the Six Days Trials.

My only failure throughout the event was losing 28 marks for being 14 minutes late at a secret check. Through this I received no award whatever, although I passed every other test satisfactorily, with the exception of losing 4 marks for silencing, and climbed every hill in the trials, including Alms Hill. Further, on looking through the results I find that other competitors losing as many, and in some cases more, marks than myself received a silver medal. Also, a machine that fails on three hills qualifies for a gold medal. Does this represent the true reliability of my machine?

F. C. PARKES.

[An article dealing with the awards in the Six Days Trials appears in this issue. The whole fault would appear to be that gold medals were won too easily by a great many competitors. If this had not been so, the anomaly complained of would not have arisen. This is not the only case where a rider fails to gain a premier award with a total of marks greater than some of the successful ones.—Ed.]

WHERE FOUR-CYLINDERS ARE POPULAR.

Sir,—With reference to "Ixion's" comments under the heading, "Not for us?" it will perhaps interest him and others of your readers to learn that the four-cylinder motor cycle has already achieved quite a vogue in this country (Holland). Both the Henderson and Ace are familiar sights on Dutch roads and cost is no deterrent here, as the Ace with full electrical equipment and 3½in. tyres sells at f.1,200 (£105), whilst the price of the Henderson is only slightly higher.

Both machines are capable of the same speeds as the Talbot car, on which "Ixion" enjoyed his 600-mile scurry, and the Henderson especially is almost as silent as a Rolls.

On the other hand, it is curious to note that the four-cylinder F.N., which was quite popular here in pre-war days, has practically disappeared from our roads. No doubt the absence of electrical equipment on this machine and its shaft-drive have something to do with this.

POPULAR PROPRIETARY GEAR BOX IMPROVED.

A New Sturmey-Archer Three-speed for Heavy Machines. Shock Absorber Embodied in Chain-drive Model. Kick-starter Mounted Directly on Layshaft.

WHEN one of the pioneers of the countershaft gear box produces a modified type of gear, it is a matter of considerable interest to the thousands who will, as a matter of course, employ this gear box on new model machines.

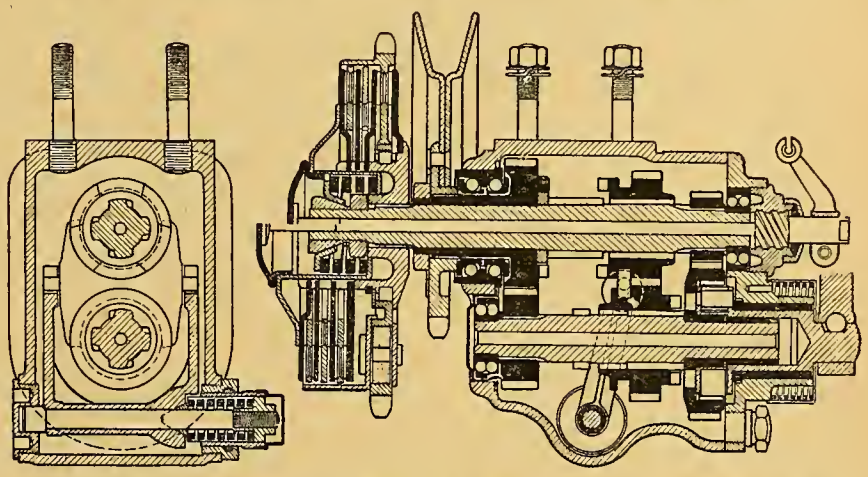
The latest three-speed Sturmey-Archer gear for heavyweight motor cycles is a remarkably neat piece of work; it is smaller, lighter, and more compact than the previous models, and whilst retaining all the advantages of easy changing and quiet running, it possesses several new and distinctive features.

Improved Clutch.

A single adjustable clutch spring now replaces the series of small springs in the earlier type. In addition, a number of rubber rings are inserted in the clutch sprocket of the all-chain model, and the drive is transmitted through these to a series of pegs in the clutch case; this arrangement provides a certain amount of flexibility and shock-absorbing capability. The clutch itself is of the cork-inserted type, having seven discs.

As is usual in Sturmey-Archer construction, all gears are in constant mesh, the intermediate wheels being moved together by a common plate; this plate is operated by a fork lying below the box and is particularly simple and robust in construction. The relief device or delay action mechanism is now integral with the shifter fork spindle in the gear box and is not carried on the control lever box.

Both sliding members in the gear are splined internally and engage with corresponding splines on their shafts when



In the latest Sturmey gear box the kick-starter is mounted on the layshaft and the final chain drive model, illustrated by the lower section of the clutch, embodies a shock absorber.

required. In general layout the box is a replica of the Sturmey-Archer lightweight three-speed gear, and the direct gear is obtained by moving the sliding members to the left so that dogs on the upper intermediate wheel engage with similar dogs on the high gear wheel, locking it to the main shaft by means of splines. Movement to the right disengages the dogs, the drive being through the intermediate wheels, both of which are locked by splines to their respective shafts; a further motion to the right engages dogs on the lower intermediate wheel with recesses in the low gear wheel on the layshaft, locking it to the layshaft, and thus the lowest ratio is obtained. A kick-starter pedal operates by a simple form of pawl mechanism through the low gear wheels, thus avoiding the necessity for an additional kick-starter quadrant. Double row ball bearings are used on the main shaft and the clutch side of the layshaft, plain bearings being used for the kick-starter end of the layshaft. The clutch sprocket revolves on a roller bearing when running loose. Particular care has been taken to avoid oil leakages, and the box appears, both mechanically and as regards compactness, to be a distinct improvement on the already well-known products of the makers.

LIGHTING REGULATIONS UNIFIED.

No Rear Lamps on Solo Machines. Head Lamp Power to be Limited. Earlier Lighting-up Times in Winter.

TO come into operation on January 1st, 1923, the new Lights on Vehicles Bill does not entail any serious alterations so far as motor cycles are concerned.

On bicycles "not having sidecars attached thereto, whether propelled by mechanical power or not, and in the case of tricycles not propelled by mechanical power, only one lamp showing a white light to the front need be carried. In the case of bicycles and tricycles not propelled by any mechanical power, the Ministry may, by order, authorise the use of a single lamp so placed to show continuously without risk of obscuration a white light to the front and a red light to the rear." It seems, therefore, that motor bicycles need not carry a rear red lamp, but a pedal cycle may have to carry a lamp which shows a red light to the rear.

The Bill first of all stipulates that every vehicle on any street, highway, or road to which the public has access during the hours of darkness must carry two lamps showing to the front a white light visible from a reasonable distance, and a lamp showing a red light to the rear. Single-track vehicles are excepted in a later section.

According to the Bill, from April 1st to September 30th the "hours of darkness" is the time from one hour after sunset to one hour before sunrise; and from October 1st to March 31st the time between half an hour after sunset and half an hour before sunrise. This section will repeal the present regulation requiring the lighting of one number plate half an hour after sunset.

A restriction is placed upon the number of lamps to be carried as well as the range of forward illumination. If a vehicle carries more than two lamps showing a white light to the front, the lamps which the vehicle is required to carry by law shall not have a range exceeding 60ft.; while no other lamp may have a range of illumination of more than 150ft.

Indefinite Rulings.

The penalty for a contravention of the Act is not exceeding £5 for the first offence or not exceeding £20 in the case of the second or subsequent offence.

The Act applies to vehicles of every kind, and it seems unfortunate that the regulations are not more definite and that certain specified exceptions may be made at the discretion of the Ministry of Transport. It is to be hoped, therefore, that these powers will not be abused.

It is also worth mentioning that no specific position is mentioned for the lamps; for example, it is not stated that they must show the extreme width of the vehicle or that the rear lamp should be placed on the offside of the vehicle.

CURRENT CHAT

Times to Light Lamps.

Sept.	7th	.. ..	8.3 p.m
,,	9th	.. ..	7.58 ,,
,,	11th	.. ..	7.54 ,,
,,	13th	.. ..	7.50 ,,

One number plate must be illuminated as above *vide* Road Vehicles Registration and Licensing Order (1921). According to the Lights on Vehicles Regulations (1903) the lamps ordinarily required by law may be lit half an hour later.

Determined Thieves.

The audacity of thieves seems to be unlimited. Recently several men broke into a cycle car owner's garage. Apparently they were unable to start the engine of the car, so they carefully removed and decamped with the dynamo, lamps and wiring.

A Real Veteran.

A paragraph recently appeared in a paper advertising a well-equipped machine of a noted make complete with clutch and kick-start—and tax paid—date 1621. A correspondent, historically inclined, enquires whether this machine was ridden by Charles I.!

Goggle Deafness.

There is probably quite sound reasoning in the argument that impaired hearing when wearing goggles is caused by pressure of the strap upon the auditory nerves. This suggestion seems to be proved by the fact that one's hearing is often slightly affected even while wearing goggles pushed up on to the forehead.

Hero-worship.

A motor cyclist was recently very much amused to see a group of street-urchins clustered round his machine and arguing hotly. This is the conversation he heard: "Yus, that's the bike wot killed 'im." "No, it ain't." "Betcha it is—look, 'ere's the bloke comin' wot did 'im in!" The boys retreated with looks of awe as the "murderer" approached.

Inverfarigaig in Scottish Two-Day Trial.

This year's Scottish Two-Day Trial will take the competitors into Highland scenes familiar to all who have ridden in the Six Days proper. The latter event was remarkable for the great distances traversed, and the forthcoming trial is equivalent to two of the severest days in that memorable event. An early start (7 o'clock; assemble 6.30) will be made from Murrayfield Tram Terminus, Edinburgh, on Saturday, September 16th—the Scottish General Holiday—and thence the competitors will proceed *via* Stirling, Sheriffmuir, to Perth, Braemar, Tomintoul, Grantown-on-Spey, Nairn, and finally Inverness, will complete the day—approximately 200 miles. Sunday will be spent at the Highland capital. On Monday the distance covered will be approximately 190 miles: Inverness, Inverfarigaig, Kyllachy, Carrbridge, Dalnacardoch, Kenmore, Sheriffmuir, Stirling, Edinburgh. The observed hills on Saturday will be Sheriffmuir, Rinloon, Cockbridge, and Bridge of Brown. None of these hills are abnormally severe, though the terrors of Cockbridge and Bridge of Brown depend upon the weather. The tit-bit of Monday's run is Inverfarigaig Corkscrew. A large number of entries have already been received by Mr. Campbell McGregor, 6, Castle Terrace, Edinburgh. A club team prize and a manufacturers' team prize are offered, in addition to the usual gold, silver, and bronze medals. It is a pity that the date of this sporting event concurs with one equally strong in its appeal to hardy riders—the Scott Trial.

A Motor Cycling Farmer.

One of the Bromley (Kent) farmers who opened roadside retail stores on their farms this week for the sale of farm produce direct at wholesale prices is Mr. Bruce Wood, an old competition rider and a member of the Woolwich Club. Many motor cyclists from London are amongst his customers, and several sidecars were seen leaving with bags, and even sacks, of produce.

A.1. Efficiency.

The fact that they are worked hard at all hours, and appear to receive practically no attention, speaks well for the machine (nearly all of well-tried makes) used by the newspaper distribution companies.

Warm!

For Brooklands use Col. Stewart has fitted a silencer of generous dimensions over the back wheel of his machine in the place ordinarily occupied by the carrier. We hope he will not give anyone a "lift"!

New M.C.C. Chairman Elected.

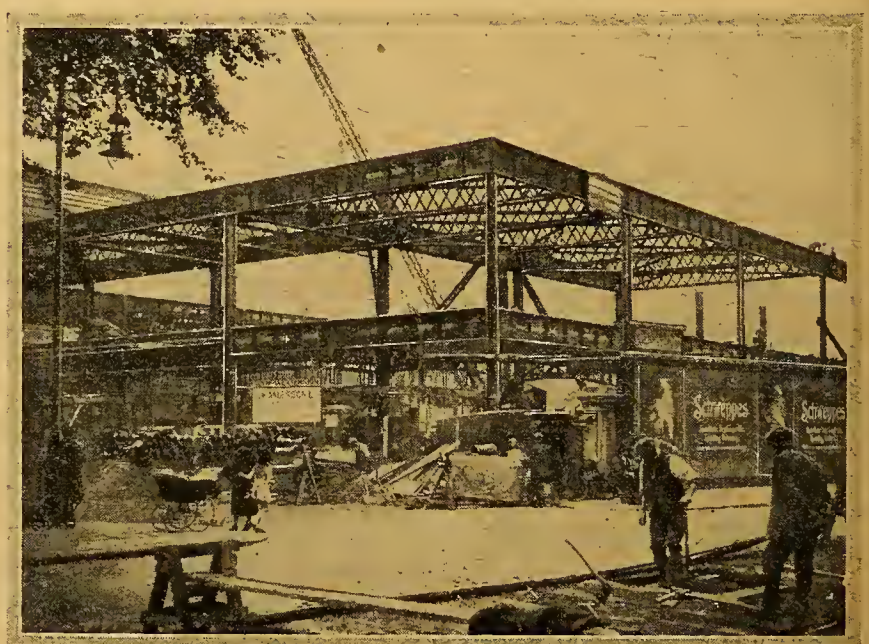
To fill the vacancy caused by the sad death of Mr. Robert Head, Mr. L. A. Baddeley, who has been so long connected with the Motor Cycling Club, has been elected chairman, while Mr. J. Ogilvie has been chosen to fill temporarily the position of honorary treasurer.

Misleading Statements.

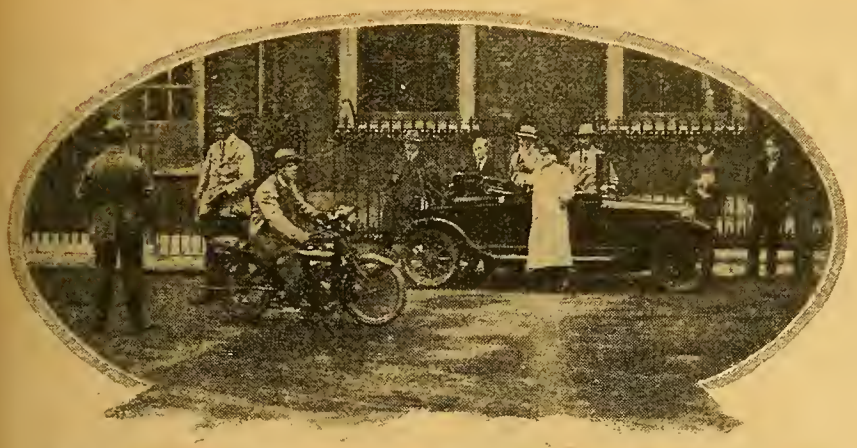
A weekly publication asks "How many 'pillion girls' have to be killed before the obviously requisite law is passed?" It is quite time that the lay Press stopped publishing nonsensical paragraphs such as this on matters about which it invariably displays supreme ignorance.

"Received too late for Publication."

It is not very helpful to give a review of the regulations of a club event in the issue of *The Motor Cycle* published two days before the event takes place. Recognition of this fact would prevent much heart-burning.



Details and plans of the new wing of Olympia have already been published in *The Motor Cycle*. This photograph shows that the work is now well in hand. A great increase of floor space will be available for this year's motor shows, and the chief entrance will be brought into the main Hammersmith Road.



A machine—the silence of which is under dispute—being submitted to test by the audiometer under A.C.U. observation.

500 Mile Race Cancelled.

Owing to complaints by Weybridge residents to the Brooklands authorities regarding the noise of long-distance motor cycle races, the 500 mile race has been abandoned. The matter is dealt with on pages 325 and 351.

Brooklands Silence Campaign.

People not in the know will be surprised to learn that there is a permanent injunction against noises on Brooklands track, which was the outcome of the first 24-hours record, made so long ago as 1907.

More Records on Monday.

On Monday last, D. R. O'Donovan, V. Horsman, and R. N. Judd, on a standard 490 c.c. Norton, started an attempt on the double-twelve record. On the first day they broke the following records—

300 MILES.—4h. 47m. 5s. Speed, 62.69 m.p.h.
400 MILES.—6h. 24m. 24s. Speed, 62.43 m.p.h.
500 MILES.—7h. 59m. 40s. Speed, 62.54 m.p.h.
5 HOURS—314 mls. 194 yds. Speed, 62.82 m.p.h.
6 HOURS.—377 mls. 1,719 yds. Speed, 62.99 m.p.h.

Exact Capacities More Interesting.

Club secretaries would make their notices of hill-climbing etc., much more interesting if they always specified the exact capacities of the competing machines. For example, when we hear that a "3½ h.p." Sunbeam has made fastest time of the day, we can only surmise whether it is a 492 c.c. or a 499 c.c. model.

Speed Trials in the Bois de Boulogne.

Unless the Paris Municipality withholds its sanction, motor cycle and cycle car speed trials will be run in the Bois de Boulogne (the Hyde Park of Paris) on the morning of Saturday, September 23rd. Last year the energetic Motocycle Club de France induced the authorities to allow it to have the use of the famous Avenue des Acacias for kilometre speed trials, this being the first time in history that speed tests had been held over a highway within the City of Paris. Application was again made this year for the use of the avenue, and while the authority responsible for the care of the Bois de Boulogne gave immediate consent, there has been a little difficulty, owing to political controversy, in getting the consent of the Municipality.

M.C.C. One-Day Sporting Trial.

Entries are being received for the M.C.C. one-day sporting trial for motor bicycles, which will start from Caterham on September 30th. Marshals are wanted for this trial, and if any readers would care to help the M.C.C. in this capacity they are requested to communicate with the trials hon. sec., Mr. F. T. Bidlake, 84, North End Road, Golder's Green, London, N.W.1. Mr. E. A. Bridgman will be chief marshal.

Police Campaign Against Open Exhausts.

There has lately been unparalleled police activity against noisy motor cycles in the Coventry and Birmingham district. The amount of noise created is apparently a secondary consideration, the main factor being whether or not the arrangements on the machine conform to the law—fish-tailed, long exhaust pipes are taboo. Now, since the law itself only asks for a reduction in the volume of sound and does not make compulsory any particular way of reducing it, the attitude of the police is not easy to understand.

Obtaining Evidence for Silencer Cases.

On a recent occasion Mr. Stanley Vine, of Sittingbourne, was stopped by the police near West Wickham, Kent, for using too noisy a motor cycle. He appealed to the A.C.U., which immediately took action and arranged a test by means of Professor Low's audiometer. This instrument was rigged up in Professor Low's car in St. James's Square, and Mr. Vine was requested to pass between two officials of the A.C.U. in front of the audiometer, so as to ensure being at the same distance therefrom on each occasion, travelling at a speed of about 18-20 m.p.h.

The noise emitted by Mr. Vine's motor bicycle was recorded photographically by the audiometer, which consists of a diaphragm on which there is a small mirror 1 mm. square. A strong light is directed on to this mirror, and is projected on to a photographic film. The film is then developed and printed, and the oscillations caused by the sound are permanently recorded, and can then be compared with the record of a machine which is accepted as being reasonably quiet

For Continental Tourists.

An article which appeared in *The Motor Cycle* of February 16th, 1922, giving all the necessary information concerning touring abroad, has been reprinted, and a copy will be sent on application to any reader thinking of visiting the Continent.

New 1,000 c.c. Records.

On Friday last E. Remington, on a 998 c.c. Blackburne, covered a mile at Brooklands from a standing start in 45.58 secs. (78.98 m.p.h.), constituting a British record. In the reverse direction he took 48.08 secs., and the mean speed international record is claimed at 74.87 m.p.h. (120.49 km.p.h.).

Maintaining Tune.

A remarkable example of maintainance of efficiency after 800 miles' strenuous road-work was given in the Six Days Trials by E. Searle's 350 c.c. Sheffield-Henderson, which actually maintained 48.3 m.p.h. during the speed test at Brooklands. Incidentally a revision of the official placings credits Searle with a tie for the second best individual performance of the trials.

Speed Trials at Morecambe Carnival.

In conjunction with the Morecambe Autumn Carnival Committee, the Lune Valley Motor Cycle Club is organising flying kilometre speed trials, to be held on the newly-constructed road between Morecambe and Lancaster on Friday, September 22nd. The road, which has just recently been completed at a cost of £27,000, is of tar macadam, dead straight, and level, being 1,900 yards long and 60 ft. wide, and has never been used for traffic. There will be a flying start of 300 yards, and at each side of the road there is accommodation for something like 7,000 spectators.

Entries should be sent to the hon. secretary, Mr. R. L. Ducksbury, Elms Hotel, Morecambe.

SMALL CAR PROGRESSION

"THE AUTOCAR"—published from the offices of "THE MOTOR CYCLE" and conducted on the same enterprising lines—is the complete automobile journal embracing small, medium, and large cars. Every motor cyclist contemplating the purchase of a light car should read

The Autocar

Every Friday 4d.

Founded in 1895, "THE AUTOCAR" is the largest and most successful automobile paper and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

Road Tests of New Models

The 925 c.c. fully sprung Clyno Sidecar Outfit.

Midland riders will recognise the familiar hill up the Bull Ring, Birmingham. With a full load of three and luggage the Clyno can re-start with ease on the worst part of the gradient.

SPECIFICATION.

ENGINE: Clyno 42° V twin, 76 × 102 mm. (925 c.c.); side by side valves.
GEAR BOX: Clyno 3-speed, Ratios 4·85, 7·6 and 16·3 to 1.
TYRES: 28in. × 3in.
TRANSMISSION: All chain enclosed.
FORKS: Brampton bi-flex.
CARBURETTER: Semi-automatic.
FRAME: Leaf-springing.

EVER since the days of the selective clutch two-speed Clyno, its makers have had a high reputation as manufacturers of sidecar outfits, and it was with pleasure that a few weeks ago we were able to announce that the big twin Clyno was once again in production.

The early post-war design was most promising in every respect, but its production was delayed for some time for works and financial re-organisation, and this delay has enabled even further improvements to be made in the final article.

Comfort and Speed.

In spite of the fact that the machine which we tried had never been on the road previously, it ran without a falter throughout a total distance of some 200 miles, and proved itself capable of maintaining very high average speeds with heavy loads. The high averages put up were undoubtedly due not only to the power and smooth running of the engine, but also to the comfort provided by the excellent spring frame and spring sidecar wheel, which absorb severe bumps to such a degree that one can maintain high speeds over rough roads, pot-holed streets or tram tracks.

Even through thick traffic top gear can be used on the 925 c.c. Clyno outfit.

After a preliminary run we left Coventry by the Holyhead road for Wellington, thence to the Wrekin to watch the competitors ascending that hill during the course of the A.C.U. Six Days Trials. The trip was accomplished in remarkably short time in spite of the new engine, and in extreme comfort. Thence on to Shrewsbury and back again to Wellington for the night.

The following day the return trip was made *via* Birmingham, and the average speed maintained was as high as could reasonably be expected of any sidecar machine. The maximum speed is about 50 m.p.h.

Throughout this trip the load consisted of an 11-stone passenger, light luggage, and spare can of petrol and a spare wheel. In addition the machine was equipped with full electric lighting and electric horn.

Cool Running.

So smooth and cool running is the engine that it may be left on three-quarters throttle for mile after mile without showing any signs of distress. It is also quiet as regards mechanical noises, though a slight improvement might be made by lengthening the tail pipe another six inches, for though the exhaust is not unduly noisy, thanks to the large cast aluminium expansion chamber, the sound

Road Tests of New Models.—

of the explosions is clearly audible to the rider, which would not be the case were a slight extension fitted.

Mechanical lubrication by a small pump driven from the timing gear relieves the rider of all responsibility, though since the engine was a new one and we were driving somewhat fast the auxiliary oil pump was employed on two or three occasions.

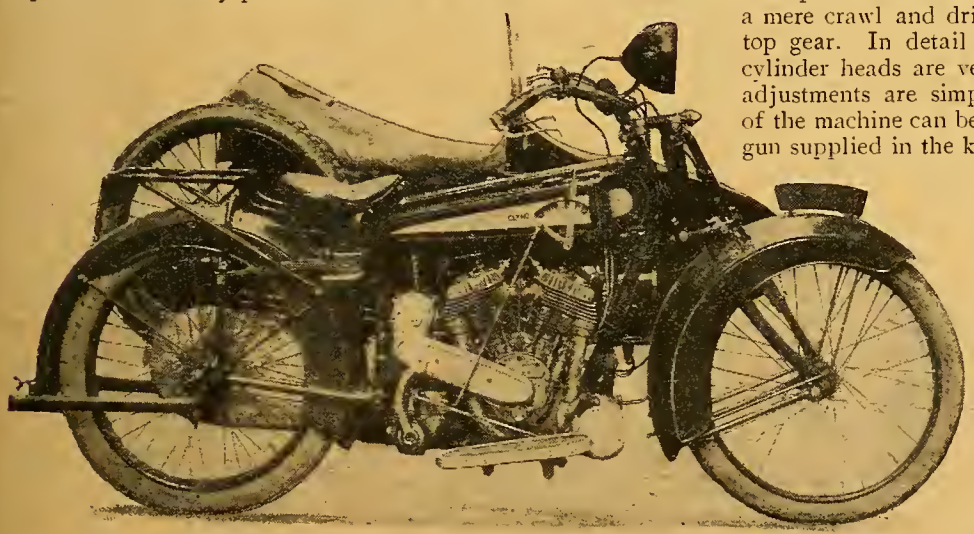
An internal expanding rear brake works smoothly and powerfully. It is in fact sufficiently powerful to lock the rear wheel, though a steel-studded tyre such as was fitted to the machine is question is not well adapted to rapid deceleration on smooth tarred roads.

With regard to the front brake, however, there is considerable room for improvement, a horse-shoe type being fitted at present which not only interferes with the quick detachability of the interchangeable wheels, but has the additional disadvantages of scoring the rims and being insufficiently powerful for use with a heavy sidecar. An external expanding brake could easily be arranged, avoiding both these defects, and we understand that the manufacturers already have this matter in hand.

Mudguarding.

The front mudguard is no less than 8in. wide, and is valanced throughout the complete arc, and these sensible proportions help to keep both machine and rider reasonably clean, and the rear guard which moves with the spring wheel is exceptionally free from rattles.

A most excellent metal-to-metal multi-plate clutch is fitted on an extension of the gear shaft, and it is particularly sweet and smooth in action. It is operated by a pedal conveniently placed on the left footboard.



The 925 c.c. Clyno outfit showing the distinctive finish and very complete equipment. Rear springing, mechanical lubrication and detachable cylinder heads are noteworthy features.

The gear box is unusually silent on all ratios, and it appears to be impossible to make a noise when changing gear, though, owing to slight stiffness in the new quadrant, we did not always change as smartly as desirable.

Rear suspension by two laminated springs seems to be ideal; no trace of side rock could be detected, and the springs were just sufficiently flexible to absorb the shocks without causing roll or bounce. The same may be said of the sidecar wheel springing, which removed all traces of those shocks usually transmitted to the cycle by the sidecar wheel, yet was stiff enough to prevent serious rolling on corners.

As to the sidecar itself, the two passengers who tested it on different occasions agreed that the springing was the most comfortable they had ever experienced, and though the leg room is a little cramped for a tall man it is ample for a passenger of normal proportions.

Suitable for Rough Tracks.

High ground clearance is a strong point for overseas buyers, and the frame with its duplicate saddle tube construction is sufficiently rigid for all requirements.

With the exception of the front brake already mentioned, the only serious criticism we have to make has regard to the petrol consumption, which was somewhat high, working out at approximately 35 m.p.g. It is perhaps hardly fair to raise this point, since the engine and carburetter were untuned and the machine was driven at more than average speed throughout the greater part of our test.

Except for the exhaust noise it would have been difficult to tell that the engine was a V twin, and from maximum speed the machine could be throttled down to a mere crawl and driven through thick traffic on top gear. In detail work the Clyno excels; the cylinder heads are very easily detachable, chain adjustments are simple, and every moving part of the machine can be greased by a special grease gun supplied in the kit.

A two-way tap enables the gear box to be lubricated en route, and the system of feeding oil (by mechanical pump) to wells surrounding the cylinder bases appears to answer admirably.

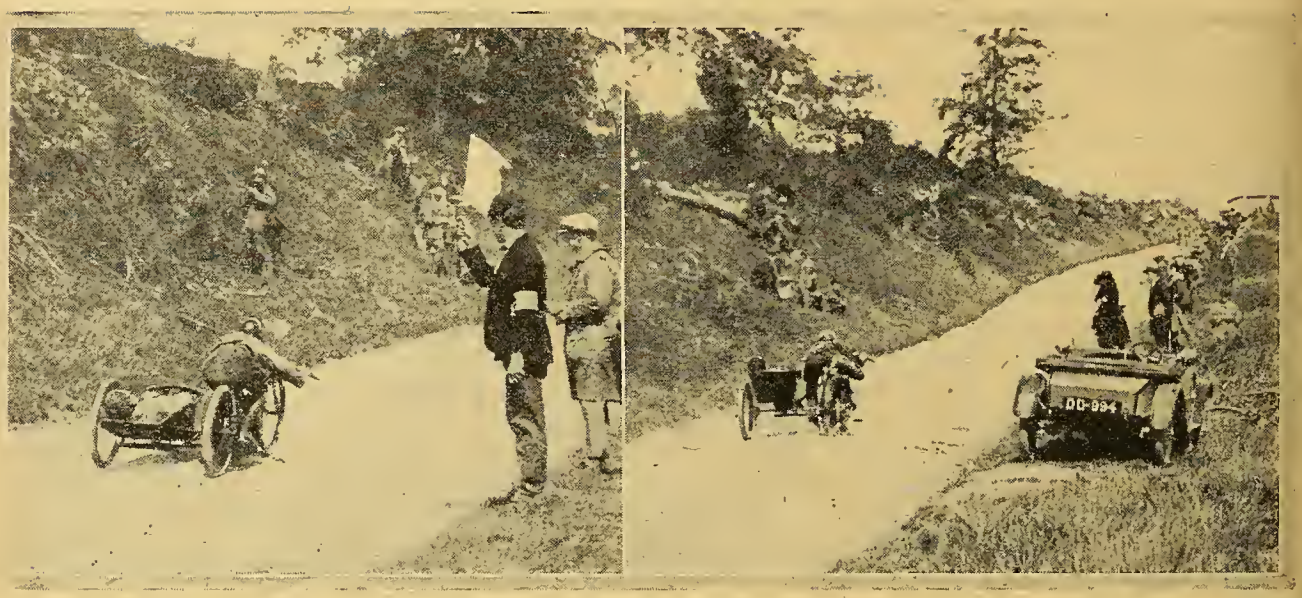
It is very seldom that we have felt so thoroughly enthusiastic over a heavy sidecar outfit as was the case after our trip on the 925 c.c. Clyno, and we wish the company every success in its latest venture.

500 MILE RACE ABANDONED.

The British Motor Cycle Racing Club has been compelled definitely to abandon the 500 Miles Race at Brooklands, which was to have taken place on the 23rd inst. This decision has been come to owing to the uncompromising attitude of the proprietors of Brooklands track, but "is taken without prejudice to any or all of the club's rights existing under the agreement now in force between the proprietors of Brooklands track and the British Motor Cycle Racing Club."

Although the resolution of the B.M.C.R.C. would seem to infer that the proprietors of Brooklands are antagonistic to the motor cycle movement, this is not so, since their hands have been forced by a few people residing close to the track.

CLUB NEWS.



By adopting these characteristic attitudes at Chatcombe hill climb, passengers and drivers reduced wind resistance to the minimum. (Left). Geo. Dance (499 Sunbeam sidecar) winner of the unlimited sidecar class. (Right). W. B. Gibb (494 Douglas sidecar) riding with one leg over the saddle.

Barrow and District M.C.

A successful hill-climb was held at Buckman Brow, Broughton, on the 27th ult., over a course measuring 557 yards. Results:

350 c.c. (ON TIME).

1. J. C. Dearden (349 Massey-Arran) ... 26⅕s.

FASTEST TIME OF THE DAY.

J. Illingworth (998 Trump-Anzani) ... ... 23⅖s.

Epsom and District M.C.C.

The best performance in the first reliability trial, which took place on August 27th, was made by F. Mellish (349 o.h.v. Blackburne) with a total loss of 18 marks. The silver medal went to G. Alder (650 Zenith), who only lost 2 marks more than Mellish, whilst H. Cropley (550 Verus-Blackburne) carried off the bronze medal with a loss of 30 marks. In the sidecar class, R. B. Furniss (678 Martinsyde sc.) won the silver medal, and R. Brookman (550 Triumph sc.) secured the bronze medal. The next reliability trial has been arranged to take place on October 1st.

Scottish Western M.C.

The official results of the one day open reliability trial held on the 26th of last month are now to hand, and are given as follows:

JAMES CHALLENGE SHIELD.—R. D. Robertson (976 Matchless sc.).

PALMER CHALLENGE CUP.—R. Watson (678 Martinsyde).

BEST SOLO NOT EXCEEDING 275 c.c.—W. Kennedy (249 New Imperial).

BEST SIDECAR NOT EXCEEDING 350 c.c.—A. D. S. Barr (348 Barr and Stroud sc.).

BEST PRIVATE OWNER SIDECAR.—R. D. Robertson (976 Matchless sc.).

BEST PRIVATE OWNER SOLO.—W. B. Anderson (349 A.J.S.).

GOLD MEDALS were awarded to the following, who lost no marks: R. M. Wilson (349 A.J.S.), J. W. Burton (293 Coventry-Eagle), Chas. McAllister (346 Francis-Barnett), J. M. Cowan (499 Rover), C. Hope Wilson (348 Barr and Stroud), R. Watson (678 Martinsyde), W. Kennedy (249 New Imperial), Geo. Grinton (989 Harley-Davidson sc.), R. D. Robertson (976 Matchless sc.).

SILVER MEDALS were won by these riders, who lost marks as stated below: E. A. Small (499 Sunbeam) 5, W. B. Anderson (350 A.J.S.) 6, Jas. Neil (346 Francis-Barnett) 9, J. G. Porter (348 New Gerrard) 2, Ian H. McGrowther (500 N.U.T.) 1, T. J. Parry (499 Rudge) 6, John May (349 A.J.S.) 6, G. A. Mann (799 A.J.S. sc.) 2, J. E. Robertson (976 Sunbeam sc.) 3, Thos. McCreadie (749 Bradbury sc.) 10.

BRONZE MEDALS.—Mrs. D. Bell (799 A.J.S sc.) 20, A. D. S. Barr (348 Barr and Stroud sc.) 19.

Tiverton M.C. and L.C.C.

An inter-club speed hill-climb, open to the clubs affiliated to the South-Western Centre of the A.C.U., was held on Holne Hill Chevilthorne. The course was approximately half a mile in length, and the event resulted in the following times being recorded:

600 c.c. SIDECARS.—1, Stagg (499 Sunbeam sc.), 40s.; 2, Parmiater (595 New Hudson sc.), 63s.

LIGHT CAR CLASS.—1, H. S. Eaton (G.N.), 36.5s.; 2, Miss Pink (Horstman), 47.3s.; 3, Holland (Salmson), 57.5s.

1,000 c.c. SIDECARS.—1, Stagg (499 Sunbeam sc.), 40.3s.; 2, Freeman (557 B.S.A. sc.), 44.8s.; 3, Parminter (595 New Hudson sc.), 63.1s.

500 c.c. SOLO.—1, Stagg (499 Sunbeam), 35.6s.; 2, Pincott (398 A.B.C.), 36s.

600 c.c.—1, Pincott (398 A.B.C.), 34.6s.; 2, Parminter (499 Sunbeam), 34.8s.; 3, Stagg (499 Sunbeam), 35s.

UNLIMITED SOLO.—1, Stagg (499 Sunbeam), 33.2s.; 2, Parminter (499 Sunbeam), 33.8s.; 3, Pincott (398 A.B.C.), 35s.

An all-night reliability trial to Yeovil was also held under unfavourable weather conditions.

Ipswich and District M.C.C.

The full results of the speed trials held at Langham Moor on Saturday, August 26th, are now to hand, and are as follow:—

TWO-STROKE MACHINES.—A. V. Adams (269 Excelsior), 19⅖s.; W. J. Coe (249 Velocette), 20⅕s.

TOURING MACHINES (350 c.c.).—G. F. Clutten (349 A.J.S.), 15⅗s.; J. F. Rose (350 Beardmore-Precision), 17s.; W. J. Pretty (349 A.J.S), 17⅕s.

500 c.c.—G. F. Clutten (349 A.J.S.), 15⅖s.; L. W. Harrison (499 Rudge-Multi), 15⅗s.; W. J. Pretty (349 A.J.S.), 16⅕s.

750 c.c.—W. R. Fison (678 Martinsyde), 16⅖s.; W. L. Harrison (499 Rudge-Multi), 17s.

TWO-STROKES (EXPERTS).—A. V. Adams (269 Excelsior), 17⅗s.; W. J. Whistock (247 Levis), 19⅖s.; W. J. Coe (249 Velocette), 20⅕s.

350 c.c. (EXPERTS).—G. F. Clutten (349 A.J.S.), 15⅖s.; J. F. Rose (350 Beardmore-Precision), 18⅕s.; A. V. Adams (350 Diamond), 17s.

500 c.c. (EXPERTS).—R. F. Fenn (499 Triumph), 12⅗s.; E. C. Rose (500 N.U.T.) and F. K. Portway (490 Norton) tied, 13⅕s., F. K. Portway winning on re-run at 13⅗s. as against E. C. Rose 13⅘s.

600 c.c. (EXPERTS).—R. F. Fenn (499 Triumph), 13s.; A. G. Mann (492 Sunbeam), 13⅕s.; F. K. Portway (490 Norton), 13⅗s.

750 c.c. (EXPERTS).—R. F. Fenn (499 Triumph), 12⅘s.; E. C. Rose (500 N.U.T.) ties with A. G. Mann (492 Sunbeam), 13s., A. G. Mann winning on re-run at 13 1-10th sec. as against E. C. Rose, 13⅘s.

UNLIMITED (EXPERTS).—R. F. Fenn (499 Triumph) tied with F. K. Portway (490 Norton) at 13 1-10th secs., R. F. Fenn winning on re-run at 12⅘s. as against F. K. Portway, 13 3-10th secs.; A. G. Mann (492 Sunbeam), 13s.

SIDECARS UNLIMITED (GENERAL).—G. Bird (650 Zenith sc.), 17 1-10th secs.; S. C. Butler (650 Zenith sc.), 20 3-10th secs.; C. O. Rose (598 Beardmore-Precision sc.), 23 3-10th secs.

SIDECARS, 600 c.c. (EXPERTS).—A. G. Mann (492 Sunbeam sc.), 15⅘s.; E. C. Rose (500 N.U.T. sc.), 15 9-10th secs.; R. F. Fenn (499 Triumph sc.), 16⅕s.

SIDECARS UNLIMITED (EXPERTS).—A. G. Mann (492 Sunbeam sc.), 15⅘s.; E. C. Rose (500 N.U.T. sc.), 16s.; R. F. Fenn (499 Triumph sc.), 16 3-10th secs.

R. F. Fenn (499 o.h.v. Triumph) made fastest time of the day, securing the Gilbert Challenge Cup; he also won the Triumph Gold Medal for the fastest time of the day made by a 500 c.c. single-cylinder machine. G. F. Clutten (349 A.J.S.) was awarded the Robinhood Engineering Co. prize for the fastest time in the 350 c.c. experts' class. L. W. Harrison (499 Rudge-Multi) carried off the novices' prize.

Yorkshire Centre A.C.U.

Organised by the Harrogate and District M.C.C., the team trials for the "Haggas Shield" will be held on Saturday next, starting from Harrogate.

Midland C. and A.C.

Nine teams, consisting of six riders in each, are competing in the Midland Centre A.C.U. inter-club team trial for the "Easting" Trophy, arranged to be run off on Saturday next, 9th inst.

Rochester, Chatham and District M.C. and L.C.C.

Events for September include a run to Chislehurst Caves on the 10th, to Perry Wood on the 17th, and the Mart Cup Trial on the 24th inst., all leaving Rochester Esplanade at 10 a.m.

Connaught M.C.C.

Apple bobbing, pole and rings, a treacle bun race, and other amusing features were included in the programme of the gymkhana held at North Harrow on August 26th. There were twelve events in all.

Belfast and District M.C.C.

A very successful fifty-mile handicap race was held on the 19th of last month at Dundonald over a four-mile triangular course. The winner, W. P. Metcalfe (976 Brough Superior), completed the distance in 55m. 30s., an average speed of 54.6 m.p.h. Second place was secured by J. Andrews (249 New Imperial), and W. Caughey (350 Mohawk) ran a close third.

Birmingham M.C.C.

The Austin playing fields have been lent by Sir Herbert Austin for the third annual gymkhana on Saturday the 16th inst., commencing at 2 p.m. The whole of the proceeds will be devoted to local charities, and the various events featured in the programme promise an excellent afternoon's sport. Particulars may be obtained from Mr. T. F. Watson, 131, Conybere St., Birmingham.

Stocksbridge and District M.C. and L.C.C

Competitors in the Moore Cup trial, held on Saturday, the 26th of last month, were fortunate in having excellent weather conditions, and as the circular route lay through delightful scenery the run was voted a great success. The winner of the cup was F. Battye (11.9 Morris-Cowley), but G. Moorhouse (532 Scott sc.) put up a strong fight, and E. Hinchcliffe (M.A.C. twin) came in a close third.

Colne and District M.C.

The reliability trial for the Starkie Cup was run off on August 20th over a course of 116 miles in the Yorkshire Dales. The winner of the event was R. F. Haigh (499 Sunbeam), who was closely followed by G. W. Spencer (211 Levis). W. Denton (799 A.J.S. sc.) secured third place. Proceeds from the gymkhana held on Saturday, August 26th, were devoted to the local hospital funds.

Basingstoke M.C.C.

Farleigh Hill has been chosen for the fourth annual hill-climb to be held on Thursday, the 21st inst., at 2.30 p.m. This event, which includes classes for practically every type of machine, is open to all members of clubs affiliated to the Southern Centre A.C.U., and a special gold medal will be awarded for the fastest time of the day. Entries should be addressed to Mr. A. T. Fleming, The Castle, Reading Road, Basingstoke.

Ross and District M.C. and L.C.C.

At the first hill-climb held recently, F. C. Morgan (349 Cotton) was successful in the open 350 and 600 c.c. classes and L. Paynter (490 Norton)—who made fastest time on the hill—won the open unlimited class and the sidecar class. W. Griffin (350 Douglas) was successful in the closed 350 c.c. and unlimited classes and second in the open 350 c.c. and closed 600 c.c. classes—a very creditable performance. The closed 600 c.c. class was won by Vincent Howell (490 Norton).

West Kent M.C.

Five competitors tied for fastest time of the day at the hill-climb on the 27th ult. On the re-run A. G. Williams (492 Sunbeam) cut down the time by ⅕s.

The winners of each class were:

250 c.c.—S. Smith (249 New Imperial).

350 c.c.—Expert: G. Fraser (349 Sheffield-Henderson). Expert barred: A. Watson (349 A.J.S.).

600 c.c.—Expert: G. Fraser (349 Sheffield-Henderson). Expert barred: H. Fitzgerald (490 Norton).

1,000 c.c.—Expert: A. G. Williams (492 Sunbeam). Expert barred: H. Fitzgerald (490 Norton).

600 c.c. SIDECARS.—H. Fitzgerald (490 Norton sc.).

1,000 c.c. SIDECARS.—G. Maund (398 A.B.C. sc.).

Sept. 13th.—Reigate, Redhill and District M.C.C.—Hill Climb.
Sept. 13th.—Eastbourne and District M.C.C.—Run to Brighton.
Sept. 14th.—North Wales M.C.C.—Reliability Trial.
Sept. 14th.—Gloucester M.C. and L.C.C.—Visit to Worcester Pottery Works.

Wallington and District M.C.C.

Commencing at 3 p.m. on the 30th inst., a hill-climb is being held at Marlpit Lane, Coulsdon, when all the usual classes will be included. Entrants are forbidden to practice on the hill beforehand. Any other particulars may be obtained from Mr. Allan Gruzelier, 168, Regent Street, London, W.

Scarborough and District M.C.

The speed trials taking place at Scarborough on Saturday the 23rd inst. form an outstanding feature of North Country motor events for the year, and an even bigger field than last year, when 180 competitors entered, is expected. The event, open to motor cycles, sidecars, cycle cars, light cars, and cars, is being held on the North Foreshore with the support of the local authorities, and is timed to commence at 1.30 p.m. Further particulars may now be obtained from Mr. J. D. Fell 2, Harcourt Place, Scarborough.

Coleraine M.C. and L.C.C.

Another successful hill-climb was carried out, despite unfavourable weather conditions, at Keady, near Lunavady, on Thursday afternoon, 31st ult. The lightweight machines monopolised the prizes, but numerous thrilling finishes were witnessed. The course measured one mile, the results on handicap being:—

Class A: (1) W. Hunter (Hunter), 8s.; (2) D. T. Carson (349 A.J.S.), 8s.; (3) C. Reid (249 New Imperial), 8s.

Class B (Lightweights): (1) W. Hunter (Hunter), scr.; (2) C. Reid (249 New Imperial), scr.; (3) D. T. Carson (349 A.J.S.), scr.

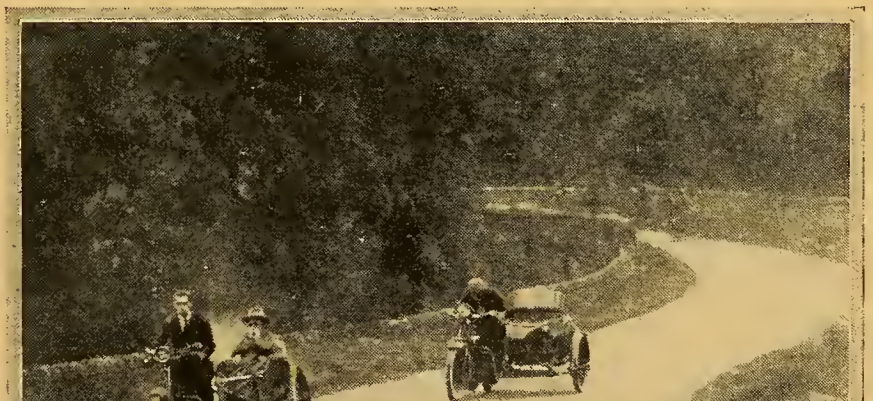
Class C: (1) W. Hunter (Hunter), 8s.; (2) C. Reid (249 New Imperial), 8s.

Class D (Scratch Event): (1) J. Craig (490 Norton), (2) J. Harrison (494 Douglas).

Dublin and District M.C.C.

Open speed trials were run off over a distance of a kilometre on the Ballyogen road in the southern portion of Co. Dublin on Saturday last. The results were as follows:—

	Handicap. (secs.)	Time.
TWO-STROKES (300 c.c.).		
(1) G. V. B. Cooke (220 Velocette)	10	38
(2) R. Humphreys (220 Velocette)...	4	37⅘
(3) L. A. W. Orr (225 Royal Enfield)	9	40⅕
FOUR-STROKES (350 c.c.).		
(1) D. M. Murphy (346 Trump-Jap)	10	30
(2) R. Hewitt (348 Douglas)	15	31⅘
(3) T. V. Murphy (293 Coventry Eagle)	8	31⅕
FOUR-STROKES (600 c.c.).		
(1) R. Walsh (500 James)	10	27½
(2) H. Adair (557 B.S.A.)	13	27½
(3) H. V. Briggs (550 Triumph) ...	12	29½
SPORTS AND RACING MODELS (600 c.c.).		
(1) D. M. Murphy (346 Trump-Jap)	15	25⅖
(2) R. Humphreys (220 Velocette)...	15	25⅘
(3) G. V. B. Cooke (220 Velocette)...	20	27⅗
PASSENGER MACHINE CLASS.		
(1) D. Allan (633 Norton sc.) ...	3	39⅓
(2) E. F. Ashton (998 Indian sc.) ...	scr.	41⅖
(3) J. E. Mills (Talbot car)	3	42⅖



An evening "stunt" event of the Harrogate M.C.C. was a slow hill climb up Pot Bank—a local test hill. Competitors went up in pairs, the slowest rider winning the heat. W. Inman (748 A.J.S. sidecar) and H. Acklan (770 B.S.A sidecar) on the lower portions of the hill.

TWO, THREE AND FOUR WHEELS.

Mixed Meeting of the South-Eastern Centre A.C.U. at Brooklands. A Series of Handicap Races.

MANY times it has been pointed out in the pages of *The Motor Cycle* that handicap races are overdone at Brooklands. What, then, is to be said of an afternoon's racing, consisting of eleven events, in which each item is a handicap race? On the other hand, what was the organising club, the Surbiton M.C., to do with absolutely unknown quantities on un-Brooklands machines and such well-known quantities as Remington and Le Vack, entered in the same race? Running level the unknown quantities would have packed up in disgust; thanks to the handicapper they had a run for their money.

In a club centre event, which should be largely amateur-private-owner (but wasn't), the handicap race is justifiable, since the riders are primarily out for their own fun and the spectators, mostly wives or ardent supporters, are not much concerned. On Saturday last the spectators certainly were numerically unimportant, being probably outnumbered by the bookies with their clerks and "tic-tac" men.

Seventeen in 350 c.c. Race.

Out of an entry of twenty-three there were six defaulters at the start of the first race, a three-lap handicap for solo machines up to 350 c.c. E. Remington (348 Edmund) and H. Le Vack (346 New Imperial) were the scratch men, H. L. Biggs (247 Sun Vitesse) being at the other end of the scale with 2mins. 30secs. start.

Le Vack appeared slow in getting away, but soon established a lead over Remington. It was clear that both these had the speed to overhaul the earlier starters, which included Mrs. Janson (248 Trump Jap) and a fleet of four Ivy's.

W. N. Peet (349 A.J.S.), 1min. 42secs. start, was clearly a dangerous element, however, for he crossed the line on to his third lap as Le Vack started his second, but the J.A.P. engine exponent was well into a 90 m.p.h. gait. A. Frazer (348 Sheffield Henderson) dropped out with a broken push rod. Finally Peet was overhauled by both Le Vack and Remington.

	Start.
H. Le Vack (346 New Imperial)	0m. 0s.
E. Remington (348 Edmund)	0m. 0s.
W. N. Peet (349 A.J.S.)	1m. 42s.

Winner's speed, 79.20 m.p.h.

Next came a car event, then followed a private owner's handicap for any type of machine not exceeding 1,100 c.c. Distance—three laps. Thirteen started out of an entry of twenty. The limit men were D. Fitzgerald (490 Norton sc.) and O. Clark (1086 G.N.) with 1 min. 42secs. start; the scratch man rode a 997 c.c. Indian. It was interesting to observe that the Norton sidecar got away much better than the G.N., and was the first machine to complete a lap, closely followed by R. Charlesworth (986 Zenith sc.), with W. H. Purdy on a nicely tuned A.B.C. hot on his tail; the scratch man was eight places behind and had a hopeless task. The next lap saw Charlesworth increasing his advantage and pressing Smith closely, while scratch, Turner (997 Indian), was "up" four places. Meanwhile, G. G. Burford (490 Norton) walked in, having left his compression somewhere on the track, G. H. Symonds (499 Duzmo) apparently had valve trouble, and C. F. Ashby (498 N.U.T.), who had been going well, now limped along on one cylinder. The first three finished at fifty yard intervals, with scratch just behind a couple of Nortons.

R. Charlesworth (986 Zenith sc.) ..	1m. 3s.
W. H. Purdy (398 A.B.C.)	0m. 54s.
D. Fitzgerald (490 Norton sc.)	1m. 42s.

Winner's speed, 66.11 m.p.h.

Waiting for the starter's flag.

Handicapping Astray.

In the senior solo handicap a dark-horse tricked the astute inhabitants of Chronograph Villa. By virtue of a non-starter, E. Headlam (496 Zenith-Bradshaw) became limit man with 2m. 9s. start from T. Allchin (989 Harley-D.), and he re-passed the line as the latter started. W. H. Sheraton (490 o.h.v. Norton) hung on to him closely for two laps and then disappeared, while G. Packman (976 Packman-Jap) was forging ahead, in turn being chased by F. A. Longman (994 Ariel-Mag). Headlam won by a clear mile, and the two last-mentioned riders changed positions as they reached the finishing line.

E. Headlam (496 Zenith-Bradshaw) ..	2m. 12s.
F. A. Longman (994 Ariel-Mag) ..	0m. 57s.
G. Packman (976 Packman-Jap) ..	1m. 9s.

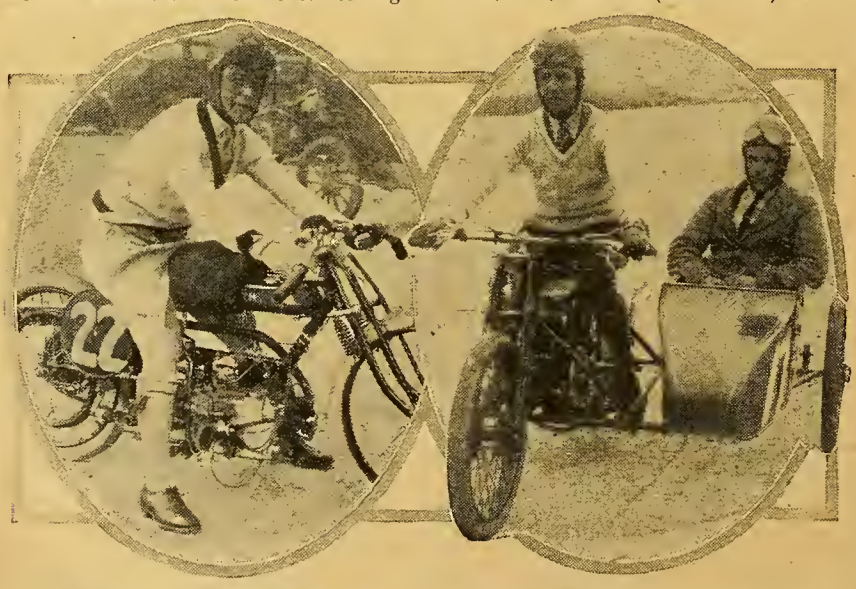
Winner's speed, 72.10 m.p.h.

Sidecars *v.* Cycle Cars.

After some "over 100 m.p.h." speeds in a car event, a passenger race followed for anything up to 1,100 c.c.

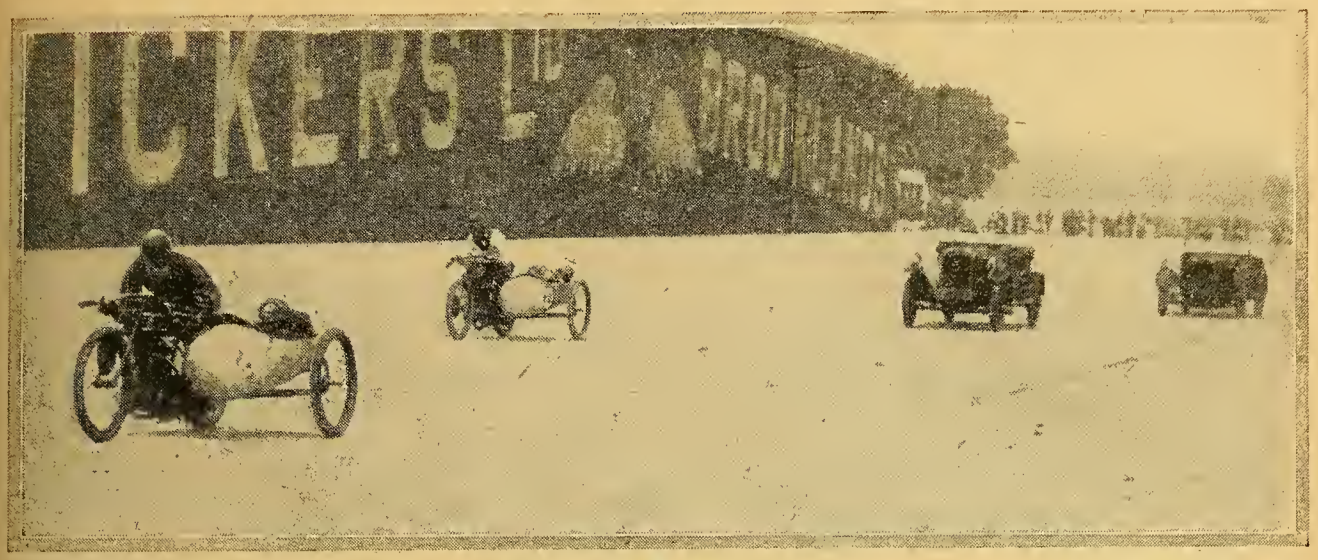
Scratch was H. R. Godfrey (1086 G.N.), while B. Alan Hill (1086 Rhode), L. A. Pollard (968 Talbot), F. W. Jelpke (348 Weatherell sc.), and S. M. Greening (348 Francis-Barnett sc.) were at the other end of the scale, with ten sidecars and a Salmson car in between.

None of the cars were placed, and Greening maintained a handsome lead for two laps. On his third round he was overhauled from the Byfleet banking by C. Volk (494 Douglas sc.), who



E. Headlam (496 Zenith Bradshaw), the limit man, who won the 3-lap senior handicap by a mile at a speed of 72·01 m.p.h.

Cecil Volk (494 Douglas sidecar) who scored another runaway win—at 59·80 m.p.h.—in the 3-lap passenger handicap. He was severely re-handicapped for the next race.



Sidecars *v.* cars in the 3-lap passenger handicap. F. W. Jelpke (348 Weatherell sidecar) and S. M. Greening (348 Francis Barnett sidecar) followed by B. Alan Hill (1086 Rhode) and L. A. Pollard (968 Talbot). A Douglas sidecar won the event.

had been favourably handicapped, and G. Packman's big J.A.P.-engined outfit was thundering up in the rear, only just failing to run into second place as the line was reached.

C. Volk (494 Douglas sc.) .. .. .. 2m. 3s.
S. M. Greening (348 Francis-Barnett sc.) 2m. 48s.
G. Packman (976 Packman-Jap sc.) .. 1m. 9s.
Winner's speed, 59.80 m.p.h.

The last big race of the meeting proper was a three-lap all-comers' handicap. Sixteen of the thirty-eight who entered their names did not materialise. Most of those who had been so misguided as to win by a good margin in previous events suffered the penalty, and were fairly and squarely handicapped. Despite this, however, the event was a ding-dong affair, exciting to watch, with Allchin (989 Harley-D.) going like the wind from scratch, but a handicap race at its worst—who was doing what it was impossible to say.

R. Charlesworth (988 Zenith-Jap sc.) .. 2m. 9s.
G. S. Werts (350 Curtis-B. and S.) .. 3m. 3s.
R. O. Lowe (490 Norton sc.) .. .. 1m. 45s.
Winner's speed, 68.90 m.p.h.

Public Schools M.C.C. Race.

In the last event of the day, which was confined to Public Schools M.C.C. members, the handicapper had been specially kind to the limit men, H. B. Browning (349 A.J.S.) and A. Fielden (348 Trump-Jap). They had the lead for two laps, then Fielden gave place to a Norton sc., closely followed by Charlesworth's big Zenith, which just fell short of annexing second place.

Fitzgerald, on the Norton, actually covered two laps with a broken handlebar, for the left half came away in his hand on the second lap.

H. B. Browning (349 A.J.S.) .. .. 4m. 6s.
D. F. C. Fitzgerald (490 Norton sc.) .. 3m. 27s.
R. C. Charlesworth (976 Zenith sc.) .. 1m. 42s.
Winner's speed, 57.01 m.p.h.

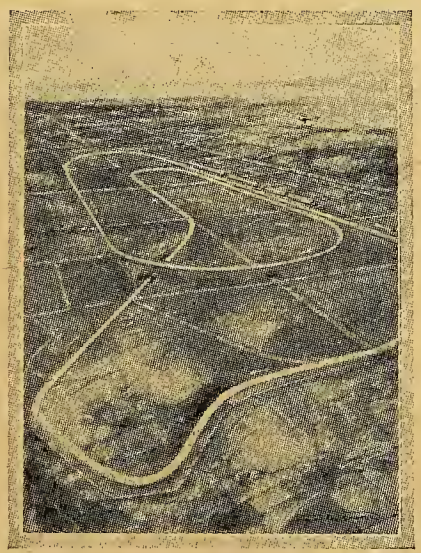
INAUGURAL MEETINGS ON NEW ITALIAN TRACK.

First Motor Cycle Event on the Monza Speedway To-morrow; 65 Entries for 248 Miles Race.

THIS week marks the opening of the new Monza 10 kilometre race track in Italy.

A voiturette race on the 3rd inst. was the first event held, while to-morrow (Friday) will be held the motor cycle race known as the Gran Premio delle Nazione, and on the 10th there will be a motor car race—the Italian A.C. Grand Prix.

The track has been built on absolutely up-to-date lines. It is situated in an erstwhile royal park seven miles north of the city of Milan, and formerly belonged to the King of Italy, who gave it to the State. The track itself has been built in country consisting of agricultural land, vineyards and woods. It is of peculiar form; one lozenge-shaped portion is described as a track, while the other is called a circuit, the two, however, forming one continuous speedway, with an underground passage, the circuit passing under the track while the grandstand will be outside, consequently the spectators therein will have in front of them a couple of parallel tracks with vehicles running over them in opposite directions. It is owing to this arrangement that the cars will pass the grandstand three times per lap.



Italy's new race course, the Monza track, near Milan.

The track measures approximately 2¾ miles round, and this, together with the circuit, makes a distance of 6¼ miles, or 10 km. The width of the track is 30ft. in front of the stand, so that vehicles may be started in groups.

Friday's motor cycle race is an international contest of 400 km. (248 miles), and in the 1,000 c.c. class there are 20 entries consisting of 12 Harley-Davidsons, 2 Excelsiors, 1 Indian, 1 Humber, 1 Norton, and 3 Gallonis. All the riders mentioned are Italian. In the 500 c.c. class the entries consist of 3 Fongris, 3 Triumphs, 3 Borgos, 3 Douglases, 1 New Hudson, 2 A.B.C.s, 3 Saroléas, 2 Veruses, 3 Sunbeams, 3 Freras, 3 Motosacoches, 2 Nortons, 2 Garellis, 2 Gileras, 3 Guzzis, 2 N.U.T.s, 3 S.A.R.s, and 1 A.J.S., amounting to 44 in all. In this case the majority of the riders are Italian, but Bartlett, who is an Englishman, will be riding one of the French A.B.C.'s, and Naas the other, while of the Saroléa riders one is a Belgian. As is common in Continental entry lists many riders are missing, but at the time of writing there is no evidence that any of the English machines will be ridden by Englishmen.

REMARKABLE DOUBLE-TWELVE RECORD.

346 c.c. Douglas Sidecar Averages over 41 m.p.h. for 24 hours. Two other Attempts Abandoned.

NO fewer than three attempts were made on the "double-twelve" record on Thursday and Friday last; but the riders scarcely bargained for encountering such extremely unfavourable weather conditions as prevailed intermittently during the whole of the two days.

Three Aspirants.

The machines were a 346 c.c. Douglas sidecar, a 989 c.c. Harley-Davidson, and a 998 c.c. Rudge, ridden, respectively, by C. G. Pullin, T. Allchin, and J. H. Mathers. Only the Douglas was successful.

A start was made at 8.26 a.m. on Thursday in a downpour of rain that continued for about two and a half hours, making the going both difficult and thoroughly unpleasant.

So bad was the weather in fact that Allchin, after experiencing a certain amount of engine trouble, gave up the attempt, and thus C. F. Temple (his relief rider) was not called upon to show his powers of endurance.

This left the Douglas and the Rudge still running, but after about seven hours under unimproved weather conditions the Rudge, which had suffered a certain amount of engine trouble, was also withdrawn, and Pullin had the field to himself.

J. D. Marvin acted as relief man on the Douglas, he and Pullin taking spells of two hours at a time.

Previous Times Broken.

The first record to fall was the five hours, previously held by Pullin at 201 miles 189 yards (40.22 m.p.h.). This time he covered 222 miles 932 yards, an average speed of 44.50 m.p.h.

Following this came the 6-hour record, previously held by J. F. Newey (293 New Comet-Climax) at 234 miles 526 yards (39.05 m.p.h.). The new record stands at 266 miles 1,362 yards (44.46 m.p.h.). Then, later, the 12-hour record suffered a similar fate, going up to 510 miles 1,623 yards (42.57 m.p.h.).

A new 300-miles record was also set up, the Douglas covering the distance in 6 hours 42 minutes 33.9 seconds (44.71 m.p.h.), followed by the creation of the "400" in 9 hours 22 minutes 1.3 seconds (42.10 m.p.h.) and the "500" in 11 hours 44 minutes 4.04 seconds (42.57 m.p.h.).

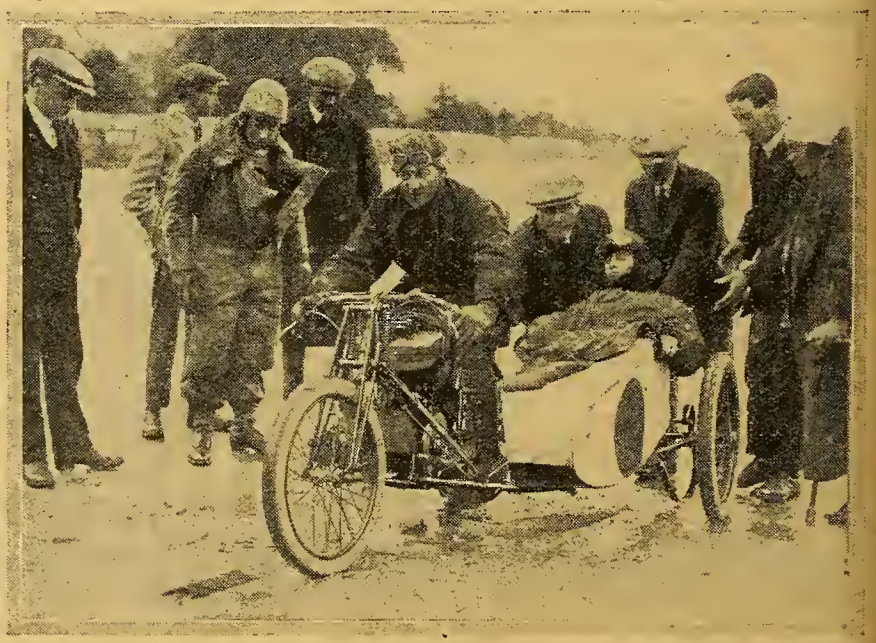
During the first half of the attempt 510 miles 1,623 yards were covered at an average speed of 42.57 m.p.h., and on the second day 491 miles 480 yards, giving a grand total of 1,002 miles 343 yards in the 24 hours, an average speed of 41.76 m.p.h.

Heavy rain fell again on Friday afternoon, and Pullin complained that whenever his turn for duty arrived it rained the hardest. He wore a serviceable-looking Sidcot flying suit, but even this was not fully proof against the elements.

Fortunately, the weather conditions improved considerably later, and the few spectators present were witnesses of a remarkable finish by the one machine which had stood up to the gruelling test—and stood up to it in a manner that is beyond all praise.

The last lap was really remarkable. After running continuously for nearly 500 miles the Douglas showed itself easily capable of a final speed burst, and lapped at 50.12 m.p.h.

With the exception of one broken valve spring, and fitting one plug and two new tyres, the Douglas riders had practically no trouble. The tyres were all Hutchinsons, and Lodge sparking plugs were employed. The fuel used was Pratt's spirit and the oil, Castrol R.



J. D. Marvin taking over the Douglas sidecar from C. G. Pullin in their recent successful attempt on the double twelve-hour record. Pullin, who had just finished two hours in the saddle, is on the left thoroughly soaked.

WHY NOT?

The Coventry Club's Combined Speed Trial and Hill Climb.

SO discouraging are the Midland police in the matter of hill-climbing competitions that the Coventry and Warwickshire Motor Club had to journey into Northamptonshire for a venue for the annual closed hill-climb. There an ascent, rejoicing in the name of "Why Not," was discovered near West Haddon.

As the new hill has a gradient of but 1 in 15 or so (its main attributes being its dead straight nature and the large stretches of grass at the roadsides for spectators to watch the proceedings), the event was termed a speed trial—and so it proved. The fastest motor cyclist averaged exactly 60 m.p.h. for half a mile—that is, if the crude timing system employed can be relied upon. This was in the open class, the rider being M. G. A. Scally on a T.T. Sunbeam. E. Poppe, mounted on a 976 c.c. J.A.P.-engined P. and P., was expected to shine, and did indeed get off the mark like a stone from a catapult, but had the bad luck to wrench the clutch off when half-way up the hill.

Motor-Cycles Beat Cars.

Apart from the motor cycle and sidecar events, there were two classes for cars, but the times of the latter were not so good as the motor cycles.

Quite a goodly crowd attended, and only one tradesman's cart descended the hill during the afternoon. A fleet of eight lightweight McKenzie's was noticed at the hill summit, but none were entered for the competition.

The names of winners of the different classes which were decided on time only are appended:—

550 c.c. SIDECARS:—
F. H. Brown (539 Rex-Acme sc.), 44⅗s.

750 c.c. SIDECARS:—
S. R. Philpot (739 Martinsyde sc.), 42⅖s

1,000 c.c. SIDECARS:—
W. J. Montgomery (976 Brough Superior sc.), 34⅕s.

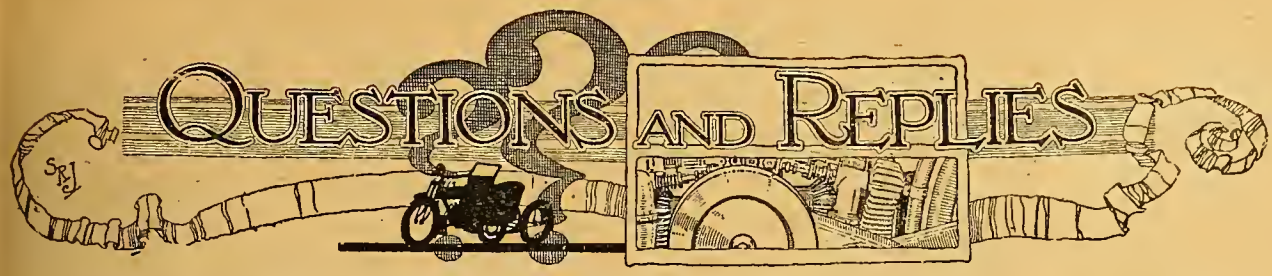
300 c.c. SOLO MACHINES:—
M. G. A. Scally (249 Rex-Acme), 35⅗s

350 c.c. SOLO MACHINES:—
M. G. A. Scally (348 Rex-Acme), 36⅕s

550 c.c. SOLO MACHINES:—
R. Elliott (499 Rover), 31⅘s.

750 c.c. SOLO MACHINES:—
M. G. A. Scally (492 Sunbeam), 30s.

1,000 c.c. SOLO MACHINES:—
W. J. Montgomery (976 Brough Superior), 30⅖s



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 1½d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 1½d. stamp) and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

PUSH STARTING.

Is there any objection to starting my 550 c.c. Triumph (which has a kick-start) on second gear, as I find it is at times much easier to get it going in this way in cold weather than on low gear, when I push the machine instead of using the pedal?—W.S.M.

There is no objection whatever to starting the machine on middle gear in the way you describe.

DIRECT CHAIN DRIVE.

How many teeth, half in. pitch, are needed on back wheel sprocket to give a ratio of 5 to 1 or 5¼ to 1 with 17 tooth sprocket on engine shaft. The wheels are 26 in. diameter and the engine is a 350 c.c. two-stroke. What width of chain should I use?—R.S.

A direct chain drive from engine to back wheel would in all probability prove very unsatisfactory, and it would be advisable to use a countershaft and two shorter chains. For a 350 c.c. two-stroke a chain of ½ in. width would be ample. You will need sprockets of 85T and 89T for 5 to 1 and 5¼ to 1 gears, respectively, with 26 in. wheels.

WEIGHT AND BRAKES.

When having a motor cycle weighed for registration, should lamps and generators, horn, petrol, oil, and tools be included? My machine is a 1911 Triumph, clutch model, with Philipson pulley, and I am a little concerned about its weight for declaration purposes. Also is one brake only (on rear wheel) sufficient to comply with law?—E.R.W.

The machine when weighed for registration purposes should be in its ordinary running condition, less petrol and oil, lamps and tools. One brake only (on the rear wheel) is insufficient to comply with the law, which requires that a machine shall be equipped with two brakes independently controlled, each one capable of locking the wheel.

NEEDS AN OPEN EXHAUST.

Since having my engine, a 1915 Connaught two-stroke, dismantled, I have been quite unable to make it go with even the two short lengths of exhaust pipe on, let alone silencer. The machine fires for a few yards and then loses power and stops. It will not even run on the stand. Owing, however, to the excellent law preserved in the country in which I reside I have been able to run with no exhaust pipes at all, when the engine will fire for ever, speed is good, and hill climbing and pulling excellent. The noise, of course, is deafening. I wish to sell the machine now, and shall have to replace the exhaust pipes. These are quite clean, as are the ports and carburetter intake. There is not very much crank case compression, but cylinder compression is good. Timing is, I think, all right. When the pipes are in position a distinct pressure is discernible for each explosion at the air intake of the carburetter. The pipes are quite clear, with no obstruction whatever.—D.S.

We cannot understand why it is that the machine will run without exhaust pipes and yet refuses to go at all if the silencing system is reinstated, unless there is some definite obstruction either in the pipes or silencer which sets up the back pressure you appear to get. Probably you have overlooked some obstruction in the pipes, and we think that if you clean them, making sure that all burnt oil and carbon, etc., is removed, the engine will give the same satisfaction as it does when the exhaust pipes are detached.

Important Dates.

Fri., Sept. 15th, to Mon., Sept. 18th—Anglo-Dutch Trial in Holland.

Sat., Sept. 16th—The Scott Trial.

Sat., Sept. 23rd—500 Mile Race at Brooklands.

Sat., Oct. 21st—B.M.C.R.C. Championship Meeting at Brooklands.

Fri., Nov. 3rd, to Sat., Nov. 11th—Olympia Car Show.

Sat., Nov. 25th, to Sat., Dec. 2nd.—Olympia Motor Cycle Show.

NUMBER PLATES REQUIRED BY LAW

Having been stopped by the police for carrying only one number plate (at the rear) on my motor cycle, I argued that I was not failing to comply with the law since, as only one number plate need be illuminated after dark there was no need for me to have two while riding in daylight. Will you tell me whether I am right or not, also the best proceedings for me to take in the matter?—O.H.C.

The law requires that two number plates shall be fitted, one at the front of the machine and one behind, but in the case of solo motor cycles, one of these plates, not necessarily the rear one, must be illuminated after dark. Cars must have the rear number plate illuminated. You are, therefore, in the wrong, and do not appear to have any defence if a summons is issued against you.

CONFUSION IN TIMING MAGNETO.

In six months my 557 c.c. B.S.A. ran between 6,000 and 7,000 miles without any trouble. A month ago I found I was not getting the full power but decarbonising, grinding in valves, and fitting new plug made no difference. I also found my petrol consumption much higher than usual, and engine got very hot. I may say the rings, bearings, etc., are all quite sound, so I came to the conclusion that the timing was wrong. A week ago the engine stopped, and nothing would induce it to start. It was impossible to get a spark from the magneto. After pushing the outfit a couple of miles to a garage, the magneto was taken down, found rather dirty, cleaned, and put back. It now gave a good spark, but still I could not get the power. The carburetter was examined, and found perfectly sound, and petrol pipe was also clean. Now nothing remained but the timing. All authorities appear to contradict each other. Your excellent little handbook "Hints and Tips," advises a medium timing for touring; the booklet issued by the makers of the machine advises: Piston top of stroke, control lever three-quarters retarded, points just about to break; while the magneto makers' booklet says: Time with the spark fully advanced. If the magneto is timed with the lever in the retarded position, the spark may occur too early for normal running when the lever is placed in the fully advanced position. Every mechanic I have spoken to on this timing subject says he has never heard of any engine being timed with the lever set at full advance, that it is absurd, a misprint, etc., etc. In the meantime I

want more power and a lower petrol consumption, also a cooler engine.—PUZZLED.

The details you give do not sufficiently indicate the nature of the defect (if any) which prevented the magneto from sparking; possibly the falling off in power of your machine, all other things being in order, resulted upon the slipping of the magneto timing, due to one of the sprockets moving on its shaft. The easiest way to time an engine is to adopt the method mentioned in the B.S.A. handbook, and the one we invariably recommend ourselves, *i.e.*, with piston on top dead centre, control lever three-quarters or two-thirds retarded, and contact breaker points just about to separate. For greater accuracy of timing, however, it is often recommended that the fully advanced position of the magneto should be used. In this case the piston setting must be arranged to suit the particular engine under consideration. With the B.S.A., for example, the piston would need to be approximately 9 mm. from the top of the compression stroke when the spark occurs.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.

"H.F." (Wigton).—269 c.c. Cleveland; 269 c.c. O.K. Junior.

"T.C." (Birkenhead).—349 c.c. Barr and Stroud engine.

"L.M.L." (Consett).—Cox Atmos or other carburetter on 799 c.c. A.J.S. sidecar.

"G.S.A." (Edinburgh).—654 c.c. Quadrant and sidecar; 595 c.c. New Hudson and sidecar.

"G.C.P." (London).—398 c.c. A.B.C.: oiling system, m.p.g., m.p.h., hill-climbing capacity.

"E.S." (Langholme.) -499 c.c. Rudge-Multi, with pillion passenger: speed, consumption, hill-climbing, and belt slip.

"H.B.B." (Barrow-in-Furness).—349 c.c. A.J.S. standard sports model: speed, m.p.g., reliability, and suitable sidecar (Lake District).

"P.S.M." (Eastbourne). — 770 c.c. B.S.A. and sidecar with Amac carburetter.

"F.S." (Cheshire).—499 c.c. Rudge-Multi with light sidecar.

READERS' REPLIES.

REBORING CYLINDERS.

Replying to "L.E.F.," we have reground and fitted with oversize pistons some hundreds of cylinders, and have taken out as much as $\frac{50}{1000}$ and have never heard of one going wrong. We hold a large stock of $\frac{30}{1000}$ oversize pistons (genuine make) of a certain firm, the machines of which are most popular, and they certainly would not make these unless they thought this amount could be taken out with perfect safety. The majority of Douglas cylinders can be taken out $\frac{20}{1000}$.—ROBERT HARVEY (Harvey and Co.).

Another Price Reduction.

As from August 31st, the British list price of the "Henderson" *de luxe* motor cycle, with electric equipment, has been reduced from £165 to £137.

Retired in Protest.

The retirement of J. A. Leyland from the Six Days Trials was in no way due to his P. and M. machine; he informs us that he withdrew as a protest against inaccurate recording of hill failures.

Measuring Gradients.

An interesting treatise on the value of measuring gradients accurately has been issued by Tapley and Co., Belvedere Works, Totton, Southampton. It points out how the Tapley gradometer provides interesting data on the behaviour of a machine.

Competing Under Difficulties.

P. N. Hills, reported as a Royal Ruby rider in the "Six Days," found himself unable to compete at the last moment, and his place was taken by B. Browning, who, although inexperienced in trials riding, successfully completed the course on a machine taken straight from stock.

For Valve Grinding.

Quick-cutting qualities are a feature of a valve-grinding compound recently submitted to use for test by Mr. P. H. White, 62, High Street, Kingston, Surrey. P.H.W. compound is supplied in two grades, packed in a double tin, price 1s.

The Reason.

The reason that G. E. Austin lost a "gold" at the conclusion of the "Six Days" at Brooklands on account of poor speed was due to his inability to hold the machine (688 Coventry-Victor) above about 45 m.p.h. owing to the back wheel being out of alignment. The engine itself was not responsible for the failure.

Puncture Prevention in the "Six Days."

Ninety-nine riders in the Six Days Trials used Jackson's Impervo in their tyres, and of these 56 secured gold medals, 6 silver, 3 bronze, and 4 certificates. None retired through puncture trouble. Six of the ninety-nine reported withdrawal of nails from tyres without loss of pressure.

British Carburetters in International Trials.

For the third year in succession the winning team in the International Trials has been equipped with Amac carburetters, despite the fact that its machines have been foreign productions. The same make of carburetter was also fitted to the winning manufacturer's team (A.J.S.) and to the individual winners in the 750 c.c., 500 c.c., and 350 c.c. classes.

Flywheel Magnetos in the "Six Days."

Three Allon motor cycles which won gold medals in the Six Days Trial were all fitted with Villiers flywheel magnetos.

Cylinder Lubrication.

Of the 79 gold medals awarded in the recent A.C.U. "Six Days Trials" 70 were won by riders who used Miracle oil.

A Correction.

J. N. Roberts, who rode a 249 c.c. New Imperial in the 250 c.c. fifty miles race during the recent "Welsh T.T.," secured first place, and not second, as was stated in our issue of August 17th.

Sidecar Taxi Popularity.

As many as thirty motor cycle and sidecar taxis have now been licensed in Birmingham for public hire, whilst twenty other towns have adopted the "County" 976 c.c. B.S.A. and sidecar, supplied by the County Cycle and Motor Co., 300-1, Broad Street, Birmingham.

Broken Records.

A number of international and British records have recently been broken by V. E. Horsman whilst using a Binks racing carburetter. Also the sidecar records won at Brooklands on the 16th of last month by D. R. O'Donovan were secured on a machine fitted with a carburetter of a similar make.

A Super Sports Machine.

A limited number of exceptionally fine "Sports" solo motor cycles is being offered by the Coventry Victor Motor Company, Ltd., of Coventry, fitted with their 688 c.c. flat twin engine, to be supplied at the same price as the standard "Sports" model. A Brooklands certificate guaranteeing 80 m.p.h. will be given for an additional fee.

Correct Lubrication.

An extremely useful booklet dealing with motor cycle lubrication is issued by the Vacuum Oil Co., Ltd., Caxton House, Westminster, London, S.W.1. It is an exceedingly full and lucid treatise on the subject which cannot fail to be of great value to the motor cyclist. Numerous useful hints and tips, and a chapter of recommended grades of oil for all motor cycles, are included.

Found on the Road.

By Mr. G. Shayler, Caversfield House, Bicester, on the 23rd inst., two miles from Bicester on the Banbury Road, a licence holder and card off a Sunbeam motor cycle.

By Mr. H. J. Youngs, 2, The Parade, High Road, Kilburn, N.W., a sidecar lamp twelve miles out of London in Essex.

By Mr. C. Hunt, 29, Parkholme Road, Dalston, E.: a motor cycle inner tube at Puckeridge at 10.30 a.m. on August 27th.

By Mr. B. W. D. Lacey, 33, Woodbridge Road, Moseley, Birmiogham: a pair of overalls on the Maenturog-Penrhyndeudraeth road.

By "Observer": a pannier bag in White Hart Lane (North London) at 10.30 p.m. on August 22nd. Application should be made to Tottenham Police Station.

MARTINSYDE

"THE TWIN TO WIN"

Overhead valves, V Twin, interchangeable wheels, coach-built side car with roomy locker and luggage carrier; complete with lamps, horn, licence holder, full comprehensive insurance policy for 12 months. Ready for the road.

6 MONTHS GUARANTEE **£50** **Down, and 12 payments of £10 3s., or £63 down, and 12 payments of £9.**

SPECIAL TERMS FOR LARGER DEPOSITS. 18 months period by arrangement.

CASH PRICE £150. Delivery from Stock. Carriage Paid.

NOTE.—We not only have the pleasure in selling you a Martinsyde, but we endeavour to keep your good-will by means of our "After-Purchase Service," which absolutely assures you of satisfaction.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns First 12 words 3/–, and 3d. for every ad- tional word. Paragraphs of under 8 words e charged double rate. Each paragraph is arged separately. Name and address must counted. Series discounts, conditions, and eclal terms to regular trade advertisers will quoted on application.

Postal Orders and Cheques sent in payment for vertisements should be made payable ILIFFE & SONS Ltd., and crossed & Co. easury Notes, being untraceable if lost in nsit, should not be sent as remittances.

All advertisements in this section should be companied with remittance, and be addressed the offices of "The Motor Cycle," Dorset ouse, Tudor Street, London, E.C.4. To sure insertion letters should be posted in ne to reach the offices of "The Motor Cycle," the first post on Friday morning previous to e day of issue. Advertisements that arrive o late for a particular issue or that are owded out will automatically be inserted in e following issue unless accompanied by structions to the contrary.

All letters relating to advertisements should ote the number which is printed at the end of ch advertisement, and the date of the issue which it appeared.

The proprietors are not responsible for clerical printers' errors, although every care is taken avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be dressed to numbers at "The Motor Cycle" Office. hen this is desired, the sum of 6d. to defray the cost of distration and to cover postage on replies must be added the advertisement charge, which must include the rds Box 000, c/o "The Motor Cycle." Only the number l appear in the advertisement. All replies should be dressed No. 000, c/o "The Motor Cycle," Dorset House, dor Street, London, E.C.4. *Readers who rep y to Box No. ertisements are warned against sending remittance through post except in registered envelopes; in all such cases the of the Deposit System is recommended, and the envelope uld be clearly marked "Deposit Department."*

n the case of motor cycles offered for sale under a box nber, as it is unusual for these to be sold without first ng inspected by the intending purchaser, advertisers will ilitate business by embodying in their advertisements ne mention of the district in which the machine red may be seen and tried.

☞ DEPOSIT SYSTEM.

ersons who hesitate to send money to unknown persons y deal in perfect safety by availing themselves of our posit System. If the money be deposited with "The tor Cycle," both parties are advised of this receipt.

he time allowed for a decision after receipt of the ds is three days, and if a sale is effected we remit the ount to the seller, but, if not, we return the amount the depositor. Carriage is to be paid by the buyer, but the event of no sale each party pays carriage one way. e seller takes the risk of damage in transit. For all nsactions up to £10, a deposit fee of 1/- is charged; on nsactions over £10 and under £50, the fee is 2/6; over and under £75, 5/-; over £75 and under £100, 7/6 l on all transactions over £100, ½%. All deposit tters are dealt with at Dorset House, Tudor Street, ndon, E.C.4, and cheques and money orders should be de payable to Iliffe & Sons Limited.

he letter "D" at the end of an advertisement is an ication that the advertiser is willing to avail himself of Deposit System. Other advertisers may be equally irous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no swer to their enquiries are requested to regard the nce as an indication that the goods advertised have ady been disposed of. Advertisers often receive so ny enquiries that it is quite impossible to reply to h one by post.

MOTOR CYCLES FOR SALE.

A.B.C.

A.B.C. Combination, 1921, original tyres; £70; com- plete, sound condition.—10, Kimberley Rd., Cam- idge. [9823

There is always "a Base to fall back upon"—at Godfreys, where a sale is but the prelude to personal sustained interest in the welfare of the customer. Once a customer your smallest requirement becomes a matter of urgent importance, your slightest difficulty our opportunity to prove the worth of real service.

1922 MODELS.

It is at Godfreys you will find all the latest models, which can be supplied from stock either for cash or on easy terms of payment.

EXCHANGES.

It is at Godfreys where the most favourable allowance is made for your present mount in part exchange for another machine, and, if desired, the outstanding balance can be paid in monthly instalments.

SECONDHAND MACHINES.

You can buy a secondhand machine at Godfreys with perfect confidence, as every machine is thoroughly overhauled in our own workshops. The same guarantee is given as with a brand new machine. The following list is but a selection.

Our full list of both new and secondhand machines, also any catalogue required, sent post free on receipt of a postcard.

DE LUXE Barr and Stroud, 2-speed, all-chain, unridden as yet; nearest £60.—28, Victoria St., Abergavenny. [9797

TWENTY Pounds off current market prices.—That is our offer to persons interested in the wonderful Barr and Stroud sleeve-valved engine. We stand alone for price and value. Send fourpence stamps for a well-compiled catalogue, 32 pages, including an art illustration of the new Model D, with double expanding brakes and luxurious fitments. It is the cheapest motor cycle in the whole world and will do 140 per gallon and take a sidecar anywhere. If you would like a free demonstration, write us at once, as we are appointing demonstrators in all the large towns. We also convert existing machines to take Barr and Stroud engines free of charge by arrangement. Write at once.—De Luxe Motor Co., 174, Corporation St., Birmingham. [1018

MANUFACTURERS' STOCK

MAKINKOT BRAND

TO BE CLEARED.

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra

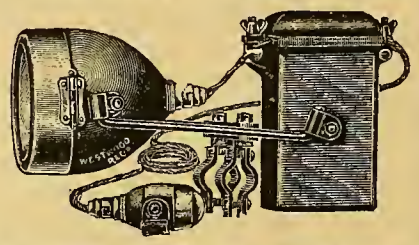
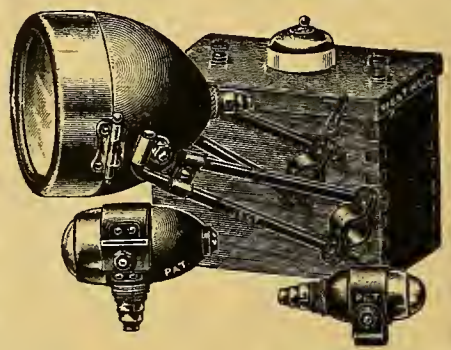
"DAYBEAM" Electric Solo Set



The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

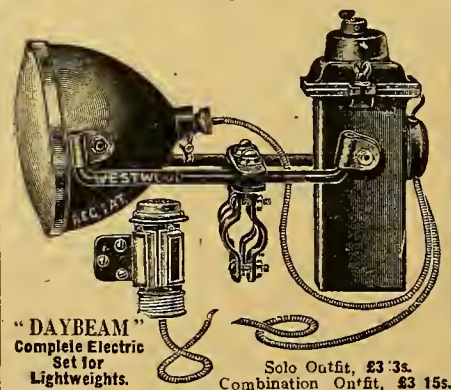
Complete Outfit, List No. 30/1, Price £5 5 0

"DAYBEAM" Combination Set



The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting, and will give very satisfactory service in use.

Complete Outfits, List No. 30/2, Price £7 7 0



"DAYBEAM" Complete Electric Set for Lightweights.

Solo Outfit, £3 3s.
Combination Outfit, £3 15s.

Sheen Park Lawn Tennis Club,
May 22nd, 1922.

Dear Sir,
I am instructed by my Committee to say they are very pleased with the Pavilion you erected for them.
Yours faithfully,
JOHN O. GRIFFITS

We erected it on Wednesday and it went together like clockwork. I am very pleased we left the order with you, as all who have seen it think the value is remarkable and admire the artistic appearance. Trusting and believing it will get you other orders from this district.
Yours faithfully,
Thos. E. Kennett.

122, Shortlands Road,
Sittingbourne, Kent.
August 17, 1922.

Mr. Brodrick,
The South-Western Appliance Co.
Dear Sir,
The St. Helier Building arrived on Saturday, two days before the promised delivery. We are more than satisfied with it.

MAGDYNAMO Engineering Co., Ltd., for magneto spares, and repairs.

MOTOR Cyclists fit reliable high quality magneto now and avoid certain failure of inferior magneto

BOSCH Enclosed Waterproof Type D.A.L. Magneto Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds, makes your engine a real live engine, give you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE Note, the above type magnetos were originally manufactured for 200h.p. aircraft engines therefore we have every confidence in claiming them to be the magneto you require for your big machine Fit one to-day, and see life with a live machine.

HARLEY-DAVIDSON Owner writes: "Magneto to hand; many thanks for prompt despatch, satisfactory in every way; will recommend to my friends."

ZENITH Owner writes: "Since fitting magneto have completed a run of 250 miles; highly satisfied will certainly recommend these magnetos."

WHY is it that the leading Motor Cyclists—the men who know—are almost all sending to us for their Magnetos?

THERE must be a reason; there is; it is because the Magnetos of quality and guaranteed service supplied by Magdynamo, beat all other Magnetos.

MAGDYNAMO will take your old Magneto in part payment.

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

ARE You a Discerning Douglas Owner? Do you want a reliable magneto with 12 months' guaranteed service that will give you starting without worry a smoother running, and more powerful engine and better results from your Douglas? Then send for the latest enclosed waterproof type Bosch ZA2 magneto now, price only £5, carriage 1/6.

C.A.V. Magnetos (not converted starters), ready to fit on Triumphs, B.S.A.'s, Nortons, and P and M.'s, with 12 months' guaranteed service, price £3/10, carriage 1/6.

THOMSON-BENNETT Magnetos, latest enclosed waterproof type (not converted starters), ready to fit on 55° Clynos and 180° Douglas machines, with 12 months' guaranteed service, price £3/10, carriage 1/6.

MOTOR Cycle and Car Owners, are you testing all your sparking plugs properly? Are you wasting pounds yearly by throwing away good plugs? Fit a Bosch aeroplane hand starter magneto on your garage bench to-day and always have your sparking plug tester at hand, price £2, carriage 1/6.

TRADE discounts and export quotations.—Write, call, or 'phone for terms.

A YEAR'S guarantee on repairs. Before you scrap that magneto, whatever its condition, let us see it, we will rebuild your magneto to look and work like new, no matter what make, within 3 days or 24 hours if urgent, and return it with a written 12 months guarantee. While your magneto is being repaired we can lend you another free of charge. We could not make these offers if we were not certain of the quality of our work

YOUR old magneto will be equivalent to new at a low cost. Send us your defective magneto now.

Unwarranted Activity Against Noise.

SILENCE in a motor cycle is a very excellent attribute, but surely the police campaign against noisiness is going too far.

The Motor Cycle has always advocated the effective silencing of motor vehicles, and we believe that much can be done in this respect without hampering the actual motor cycle user in any way. Furthermore, we agree that many machines on the market to-day are far too noisy, and that very often the manufacturer is not wholly blameless. Therefore a certain amount of activity on the part of the police is understandable. But it begins to be serious when events occur such as happened at Coventry recently.

In the same day, at the same police court, two motor cyclists were summoned. In one case the alleged offence was that of being drunk in charge of a machine; in the other, that the machine was too noisy. The first man was fined 10s.; the latter, 40s.

The case simply supplies confirmation for what we have already said; the present campaign against noise has, in the Midlands anyhow, far over-stepped the bounds of commonsense. Even more, it has over-stepped the strict letter of the law.

The Motor Cars (Use and Construction) Order No. 11, 1912, says:—

> "(7) He shall not use any cut-out . . . which will allow the exhaust gases to escape . . . without first passing through a silencer, expansion chamber, or other contrivance suitable and sufficient for reducing as far as may reasonably be practicable the noise. . . ."

This regulation is ignored, and the fact that a motor cycle has a long exhaust pipe, however silent it may actually be, is accepted as conclusive evidence of guilt. Any action by the authorities against noisy motor cycles ought always to be based on volume of noise, as the law requires, and not on a technical point of expansion chamber arrangement.

Anglo-Dutch Trial Cancelled.

IN Holland, no less than in this country, there will be considerable disappointment at the falling through of the arrangement for the annual Anglo-Dutch trial, as is now definitely announced elsewhere in this issue.

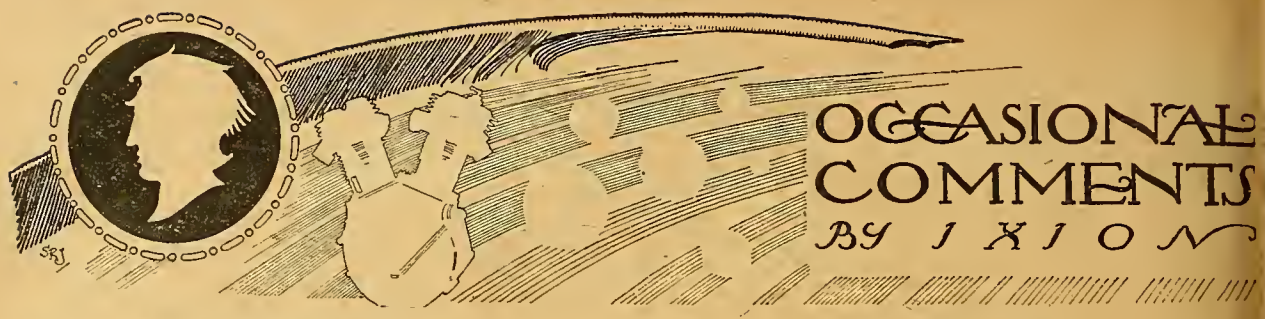
By allowing the event to die out, those responsible have abandoned one of the most valuable of international trials; not a trial valuable as a technical test, but one of inestimable worth as an opportunity of demonstrating to the keen and sportsmanlike riders of a friendly disposed Continental country the excellence of British motor cycles.

This year the trial was to have taken place in Holland, and the organisation, at a late hour, appears to have been deputed by the A.C.U. to its Eastern Centre. Between the two stools a popular event has fallen to the ground, the parent body apparently indifferent, and the subsidiary body handicapped by the suddenness and lateness of the commission; certainly no blame attaches to the latter.

Strong complaints on the matter have already reached us, and it has been pertinently asked why a slightly supported International Trial (which costs each participant from £50 to £70 and ten days of time) should be so strongly fostered while a deservedly popular event occupying but a week-end and costing about £10 per head should be allowed to die away.

Worst phase of all is the apparent unsportsmanlike slight which the Hollanders must feel after they had got forward the entire arrangements for the trial about two months ago.

An index to the advertisements in this issue will be found on the page facing the back cover.



Solo and Passenger Golds.

EARLY this summer I heard a number of cracks disputing as to whether a solo or a sidecar machine gave an ambitious rider his best chance of a gold medal in a Six Days; they were being consulted by an aspiring amateur, who desired to secure his English and Scottish golds in the same year. Discussion waxed hot, the voting being, on the whole, in favour of the solo machine. The soloists argued that structural fractures were more likely with sidecars; that wheelslip on freak hills was more probable; and that "blinding" to regain lost time was more perilous. On the other hand, the sidecar enthusiasts held that a good driver with a good machine could go steadily from start to finish; that interchangeable wheels simplified the puncture problem; that wheelslip on freak hills was merely a matter of pathpicking *plus* sensible throttle management; and, above all, that in a wet week the three-wheeler ensured its jockey a far easier passage, as he was saved the eternal effort of holding the machine up.

No Nearer Solution?

THE dispute was interesting, and the A.C.U. trials have brought it no nearer a solution, to my thinking. True, a sidecar filled the first place for the Hopwood prize (best performance of the week). True, again, that a sidecar won the Centre Premiership. On the other hand, a solo rider tied with the runner-up for Hopwood award, and several solo machines were only pushed out of the list for reasons which the average rider does not regard at all seriously—the three 500 c.c. Sunbeams were all mulcted five marks on the score of silence, and two of them lost a further two marks for a brake test which very few machines in daily use could pass, perfectly safe though they are for all ordinary purposes. If percentages be taken as a guide to the vexed question of what type of mount offers the best chance of a gold, the 350 c.c. solo machine must have our vote. With twenty-seven starters, this class secured eighteen golds—66%—and only shed four of its number by the way. The big sidecar class had thirty-seven starters, twelve retirements, and eighteen golds—less than 50%. The 500 c.c. solo class attracted twenty-two starters, won thirteen golds, and finished eight under strength, slightly better than the sidecars.

"Ixion's" "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.

Featherweights.

UNQUESTIONABLY the top spot of the whole trial was the splendid performance of Purnell's 169 c.c. J.E.S. That he only gained a certificate was a misfortune which will obscure the real merit of the feat. He had five hill failures—on roads which no private owner of a utility lightweight would ever desire to travel. He was fifty minutes late on the first day. He was mulcted of two marks for noisiness. On the other hand, he accomplished far, far more hill-climbing than any buyers of a J.E.S. would tackle in a year. He kept dead time for four whole days. He was awarded a bonus—the only bonus of its kind in the list—for the excellent condition in which his lilliputian mount completed the course; and he averaged over 27 m.p.h. for his seventy odd miles on Brooklands. Only one factor obstructs a boom in the featherweight motor bicycle—namely, its usual lack of reliability, expressed particularly in terms of power maintenance. Ladies and elderly men want a featherweight which does not ask for perpetual tinkering. The J.E.S. performance is the first real hint we have had that the day of the trustworthy tiny may be nearer than some people fancy.

Those Second-hand Dealers.

A NOVICE friend bought a machine at quite the top market price from a very eminent dealer in second-hand stuff. This dealer had obviously passed the machine on just as he took it over from its last owner, who may or may not have been the original buyer. One proof was furnished by the cylinder, which was scored. Another was the heavy internal carbonisation of the piston, which no professional mechanic worthy the name, would have neglected. A third indication of my charge was the fact that the two top piston rings had lots of up-and-down play in their grooves. A fourth was the fact that a small chunk was missing from one side of the face of the exhaust valve, and that this in turn had reacted on the valve seating. Ought a leading dealer, disposing of a used machine at a high price, to pass it on without instructing his men to remove the cylinder, and peep at the innards of the beast? No one of these defects was really serious. They had not put my friend to any great expense. They did not produce any aggravating roadside trouble. But they betrayed both to me and to him the methods of the firm in question. It evidently accepts a used machine in a deal; sends it for a brief run; and vets. it as sound if there is no appalling noise and no glaring lack of power.

Occasional Comments.—

Brake and Chain Adjustment.

WE can all remember the days when the gear control always needed adjustment if the gear box was shifted to set the chain tension; on most modern machines this auxiliary job is obviated by sounder design. Another "combined" adjustment dies much harder. When we reset the rear chain by moving the back wheel in the forks, the adjustment of the rear brake is usually disturbed. If this brake is of the belt rim type, the rider generally leaves the brake alone, trusting to its long movement to preserve plenty of stopping power. The point wants watching. Only last week I saw a sports solo involved in a nasty little crash, and the expert rider confessed to me privately that he had tightened his rear chain the night before, and left the brake alone. Result—when he wanted to stop in a hurry, the brake hardly responded at all; and as his front wheel was disfigured by an obsolete stirrup brake, he was helpless. Good design will obviate these "consequential" adjustments; the ideal rear brake remains unaffected by sliding the wheel in its draw-bolts. While I am on this topic, I should like to stir up designers to notice how many hard riders are substituting internal expanding or dummy belt rim front brakes for the stirrups to which some makers cling so obstinately. These people recognise that an effective front brake has more than a mere legal value—down 1 in 3, for instance.

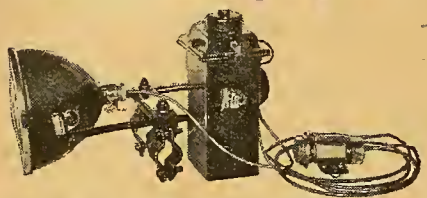
Easy When——

YOU know how. The other day I had occasion to dismantle the pump portion of a drip feed by the roadside. At the base of the pump was a gauze filter disc, secured by a light screwed ring with slots on each side. Behind gauze and ring was a terrific spring, equal to about three ordinary exhaust valve springs, superimposed. I took it out reluctantly, not daring to think how I should get it back. Repairs complete, I made several essays to replace it before I hit on a simple dodge. With one hand I held the ring and gauze against the edge of my rear number-plate, so that the plate engaged the slots of the ring. With the other hand I registered the pump barrel (with its spring inside) against the threads of the ring, and screwed it on. What threatened to be a very awkward job was successfully concluded in 10 sec. from devising the correct method. Incidentally, I have never previously had to take down a drip feed by the roadside, which indicates the reliability of these gadgets.

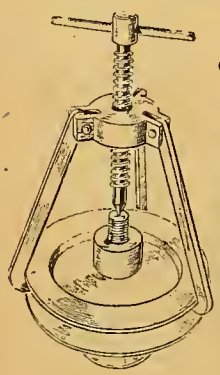
A CHESHIRE BEAUTY SPOT. This typical and charming bit of "old England" is at Eccleston Ferry on the Dee, three miles from Chester. It is a landscape that many American visitors look upon as a perfect gem among English pastoral scenes

AMONG THE ACCESSORIES

Self-contained Lighting Set.



Well-made and well-finished this Westwood self-contained accumulator lighting set is marketed complete with rear lamp, wiring and switches. (Westwood Rim and Patents, Ltd., London Road, Bordesley, Birmingham).



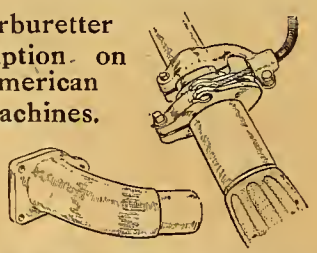
For Garage or Workshop.

Pulleys, magneto sprockets, or any other members that come within the range of its two sizes, may be readily detached by the Endolite pulley remover, 15s. (A. J. Dew & Co., 21–25, Endell Street, Long Acre, London, W.C.2.)

Piston Groove Scraper.

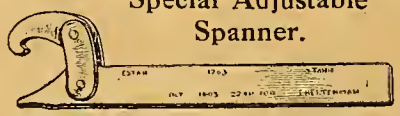
Piston ring grooves are easily cleaned by the B.H. scraper, 1s. 6d. (The B. H. Co., Eliot Works, Castle Street, Liskeard, Cornwall).

Carburetter Adaption on American Machines.



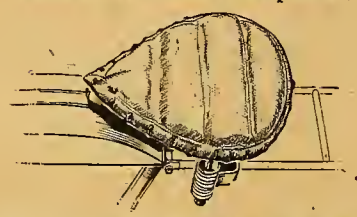
Special aluminium inlet pipes and adapters to twist grip control are now supplied to enable Binks carburetters to be fitted to Harley-Davidson machines. (C. Binks, Ltd., Church Street, Eccles).

Special Adjustable Spanner.



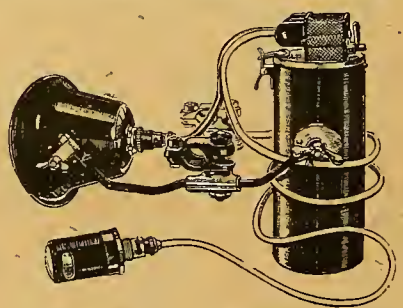
For adjusting conventional steering-head nuts and some types of exhaust pipe fastenings of various sizes, the Estar hinged spanner is specially useful. 4s. 6d. (U.S. Tarr, Pittville Garage, Winchester Street, Cheltenham).

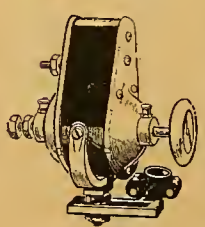
Comfort at Small Expense.



Elderly riders of rigid frame machines may derive considerable comfort from the Pontifex pneumatic cushion, which laces round the saddle and may be inflated by the mouth. £2 2s. (J. H. Pontifex, Ltd., Buckingham Palace Road, London, S.W.1.)

Low Priced Dynamo Lighting.



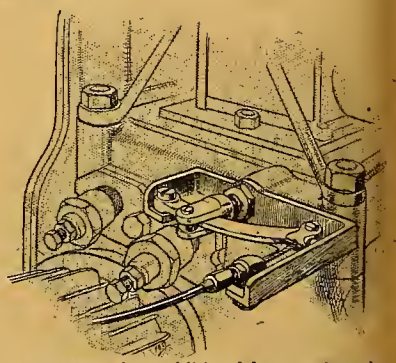


Ward and Goldstone, the makers of the Voltalite dynamo so well-known in the pedal cycle world, have marketed an improved set for motor cycle use. The handlebar lamp and large capacity dry battery for use when the dynamo cuts out of action are mounted together, and a rear lamp and, if required, a sidecar lamp are supplied It is impossible to wire the set up wrongly. £10 (solo set), £11 10s. (sidecar). (Ward and Goldstone, Ltd., Frederick Street, Pendleton, Manchester.)

Three in One.

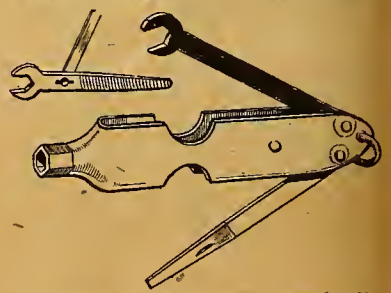
Watch-holder, licence carrier and switch are all incorporated in the accumulator case of the lighting set produced by the Motor Cycle Accessories Co., 43a, New Cross Road, London, S.E.

Lever-aided Valve Lifter.



By means of an additional lever action, the Eli Clarke fitting for 595 c.c. Douglas engines lessens the strain on the exhaust lifter wire. 15s. 6d. (Eli Clarke, Cheltenham Road, Gloucester.)

Handy Magneto Pocket Tool.



Comprising two flat spanners, a magneto file, platinum point gauge, screwdriver and a box spanner, a handy pocket tool is sold at 5s. 6d. by the Hobson Manufacturing Co., Ltd., 29, Vauxhall Bridge Road, London, S.W.1.

Insurance Problems.

A Feature in which Insurance Questions are Answered and Discussed.

It is now generally accepted that insurance is a vital necessity in the case of every motor cyclist. The number of communications received on insurance matters, too, indicates that readers are very keenly interested in this subject; some of the questions require expert advice, and this feature has been formed to deal impartially with the various problems that are presented to us.

The close associations of "The Motor Cycle" and our sister journal, "The Autocar," with the Autocar Fire and Accident Insurance Co., Ltd. (a company evolved from the old Autocar Insurance Department, founded 18 years ago) enable "The Motor Cycle" to keep in very close touch with all matters pertaining to insurance—an undoubted advantage to our readers.

Enquiries will be welcomed and should be marked "Insurance" on the left-hand corner of the envelope and addressed to "The Motor Cycle," Dorset House, Tudor Street, E.C.4.

An Unusual Collision.

A reader says an acquaintance of his had a curious experience the other day whilst riding his machine through Epping Forest with a passenger on the pillion seat. He collided with a deer which ran out from the woods. He asks what claim for damage to the machine would be allowed in a case of this sort where the cause of the accident is of so unusual a nature.

If the machine in this case was damaged by collision with the deer, it would undoubtedly be a claim under the ordinary policy just as much as if the collision had been with cattle on the road or any other object.

* * * *

Insuring Accessories.

Mr. W. Dewsbury, Liverpool, writes:—"I have on my machine at least £40 worth of accessories, and it is quite conceivable that a thief may effect a complete clearance of these one night. Yet if he leaves the machine I do not recover a penny. Can you tell me what the premium would be on, say, lamps (2 sets), speedometer, horn, electrical and other things, to the value of £40? Would a reputable office accept the proposition?"

As the accessories of your machine appear to be of rather higher value than usual, you will probably find that if you placed full particulars before your insurance company, it will be willing to issue a separate burglary policy in respect of the accessories. Unless the company which insures the cycle will do this for you, we doubt whether any other office would cover the accessories alone. The premium would be the subject of a special quotation.

* * * *

Malicious Damage.

Mr. E. C. Willcot, of West Drayton, says:—"A friend of mine had all three of his tyres gashed with a knife so badly as to render them useless. The insurance company tells him to recover from the perpetrator. The culprit was thought to be a small boy, but this cannot be proved. Although a premium of £8 had been paid he cannot recover a penny. Should the company have refused payment?"

The policies issued by the Autocar Fire and Accident Insurance Company, Limited, include compensation in respect of damage caused by the malicious act of third parties. If this risk is not covered by your present policy, we are afraid that the only thing you can do is to consider transferring your insurance to another office, so that in the event of such damage occurring again you would be covered.

Agent's v. Makers' Repair.

Mr. J. Hendrie, jun., Glasgow, writes: "I took delivery of a new motor cycle on Saturday, August 26th, 1922, from the firm's Glasgow agent. Immediately I got delivery, I registered and insured it to cover everything. On Sunday my brother had an accident with it. I reported and claimed on Monday, leaving the machine at the agents to be returned to the makers for repair. The machine was a special super sports model for competition work. I wanted the machine returned from the maker exactly the same as I had received it on Saturday. On Tuesday, when I went to the agent, the insurance agent had been there, and gave the motor cycle agent the machine to repair. The handle-bars were twisted, the tank was dented and scratched, the footrests were twisted and bent, the front mudguard was dented in several places. I want all the articles removed. The steering column was also twisted. I went back to the insurance office and told them I would not be satisfied unless the machine was sent to the makers and I got the makers' guarantee that everything was the same as it was originally. They said that they could get it repaired cheaper in Glasgow than sending it back to the makers. The motor agent gave them an estimate of £3 10s. to put the machine in order, but I am not satisfied with this procedure.

The driver of the other machine that caused the accident admitted that it was his fault, and the police constable gave my brother his name as a witness. The other machine is also insured. Would you oblige me by letting me know if I can force the insurance company to send the machine back to the makers?"

From the details you give of the damage to your machine, it does not appear to us that this is severe enough to justify any extra cost which would be incurred by sending the machine back to the makers. If the insurance company gives instructions to the motor agent for the repairs, it takes the responsibility of seeing that the work is properly carried out. Should, however, you decide to insist upon the cycle being sent to the makers, a detailed estimate should be procured and forwarded to the insurance company, so that it will have an opportunity of discussing the matter with the makers before the repairs are put in hand.

Following the Blue Trail

The Personal Impressions of "The Motor Cycle" Representative on the Six Days Trials. The Sporting Aspect of the Event.

WHEN a member of *The Motor Cycle* staff is allotted an event like the Six Days Trials, those of his colleagues who have never had the same task themselves are inclined to talk enviously about another holiday and so forth. Whereas, except that it means a week in the open air, the stern reality resembles a holiday as much as did a spell of trench digging to an infantry battalion out on rest in the days of the war.

It means a week of sheer hard work for the man and, of course, an even greater strain on his machine. That is why, although 250 c.c. machines in the competition win gold medals with apparent ease, the Pressman invariably uses something hefty of 500 c.c. or more. My machine for the recent big A.C.U. event was a four-valve Triumph with 3,000 miles already to its credit, and there were but very few occasions when I wished it were anything else.

Where were the Private Owners?

In consequence, I thoroughly enjoyed the affair, and am constrained to wonder why more private owners' names did not appear on the entry list. Had I had any mechanical troubles I would probably now be feeling amazed that anybody at all had been mad enough to attempt to follow the wonderful blue trail that led (usually) to nowhere desirable by the most round-about route! Of course, in reality this does not apply to the amateur competitor, to whom a breakdown is merely momentarily galling; to myself, at times, it would have been sheer disaster.

There is something extraordinarily fascinating in bumping round a trials course, in keeping upright on viscous slime, in clambering up landslides like Rosedale Abbey Bank without putting one's feet down. Whether the sidecarist gets the same feeling of achievement is a matter upon which I am not qualified to write, but certainly the soloist extracts real pleasure from a section of difficult going. Furthermore, in my case there were no secret checks and my schedule was generally to get along just as quickly as I safely could.

The Triumph seemed to enter into the spirit of the game. It took advantage of every little opportunity of acceleration, up or down hill, confidently because it has an exceedingly excellent rear brake. It climbed every hill in the event in a pushful manner, usually on top or second gear. It alternately bucketed or ploughed over colonial sections with never a desire to wobble or lie down—except once—and if its tail wagged slightly on certain particularly unpleasant, deep wet clay tracks towards the end of the week—the 3in. rear tyre had little of its original tread left—it was always possible to right it by gripping a little more tightly on the enormous Pedley rubber grips and knee grips of the same ilk.

"Fools Step in . . ."

Perhaps it was the way it conquered Rosedale Abbey Bank that put me in such good humour with it for the rest of the week. I had never seen that fearful acclivity before—possibly it was just as well—and I am no George Dance.

Following the Blue Trail.—

Anyhow, although dogged by sooting sparking plugs, I contrived to draw fifteen minutes ahead of No. 1 on Monday morning, and, eluding a frantic Yorkshireman with a red flag, rattled up a loose and stony hillside, dotted with many spectators, which I judged was the much vaunted tit-bit of the trials. The first bend was easy—the old rule of keeping to the outside once more proved its usefulness; so was the cross over for the more acute left-hand turn immediately following; but the bend itself demanded a surprising amount of concentration, and it was with a sigh of relief that I straightened out again—only to find that I had in reality but started the climb. Approaching the worst gulley with caution, I remembered that machines with far more clearance than mine were reputed to ground thereon, and for the life of me I could not recall which side was most suitable for a jump.

Compromising, and because there was little time to think, I went hard at the centre. There was a sickening jar and grating sound as the silencer and footrest hanger-bars scraped over. For the first time I kicked out with my feet, and to my great surprise was able to replace them a couple of yards further on as I sailed easily to the summit.

The Baulking Nuisance.

Had the competitors been sent up one at a time I am sure there would have been many more perfectly clean ascents, for, as I have inferred, I am not nearly such a clever rider as many a man who failed completely on the same hill.

Colonial sections did not worry me; in fact, I averaged the legal limit over some of the most difficult

(Top). It is suggested in the article that sidecarists do not gain the same sense of achievement as the soloists on such a hill as Rosedale. Their difficulties, if of a different variety, are, anyhow, just as great. (Left). For some Whitehorse Hill was a fairly easy second gear climb; for others it provided most unpleasant surprises in the shape of grounding crank cases, or wagging rear wheels. Two Allon riders making cautious ascents. (Bottom). J. H. Davies became one of the heroes of the event by persuading a high-geared, long-stroke T.T. Sunbeam round a course where 20 to 1 gears were often not too low.

Following the Blue Trail.—

15 m.p.h. stretches. From what was casually said by a competitor on a lightweight who followed me over the wet, boulder-strewn track a few miles from Rudyard on Tuesday, I fear that my progress at times was far from elegant; but, anyhow, I always got there, and almost invariably without footing. By the way, to the true solo enthusiast the avoidance of footing becomes alike an obsesssion and an ideal, almost a religion.

By the time the blue dye began to indicate a definite homeward trail on Friday morning I had reached the stage where driving on treacherous roads became a purely mechanical sequence of operations, instinctive rather than by conscious effort. It proved to be a dangerous phase. Ten miles from Gloucester I hit an unnoticed stretch of grease at 30 m.p.h. with alarming suddenness, and a Lucas electric head lamp and front number plate occupied the positions hitherto held by the tyres. Neither of these members was improved thereby, but nothing else was damaged.

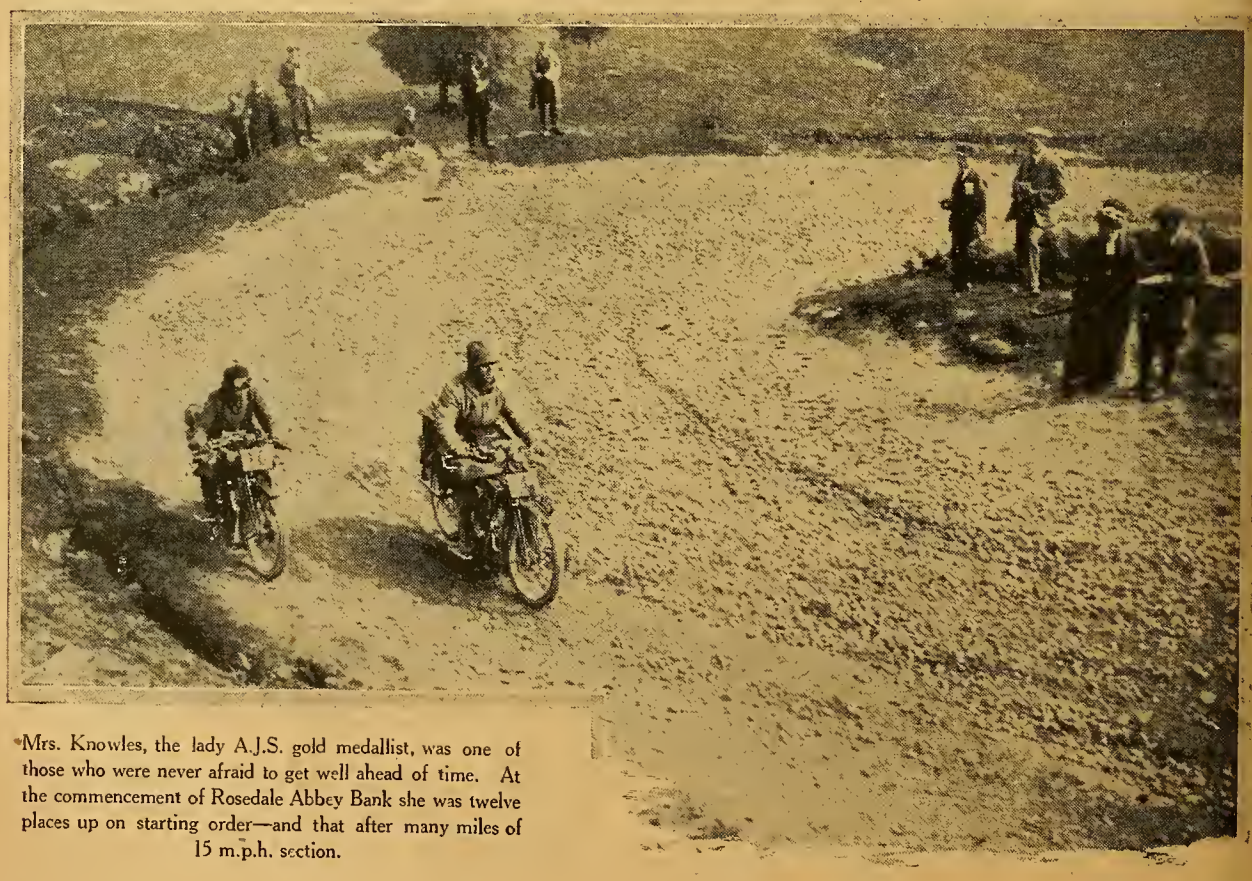
As I kicked things straight by the roadside I had the consolation of seeing everybody else who passed wobble alarmingly, and at least one take a similar toss. This was Lovegrove, the Radco rider, upon whom hinges another tale.

The True Sporting Spirit.

When he slithered into the mud with his machine more or less on the top of him I was engaged in hauling the Triumph on to its stand, and confess that I looked on his predicament more with amusement than anything else. However, Mrs. Knowles, who followed hard at his heels, was quicker-witted, and realised at once that the Radco had pinned its rider to the road. She pulled up, dismounted in a flash, and flung her A.J.S. into the hedge, rushing to the assistance of the unfortunate rider before I had realised that anything serious was amiss. Although I still feel somewhat ashamed at my own unfeeling attitude, I think Mrs. Knowles' sporting spirit deserves the widest publicity.

Alms Hill was the scene of my next discomfiture—slight, it is true. I had been up before when it was so wet that ninety-five per cent. of a trials entry had failed entirely. Consequently on Friday afternoon, when it was lined with hundreds of spectators, I faced it in a spirit of great caution and in low gear all the way. It was distinctly galling to witness later competitors, who had never seen the hill before, come charging up at speed on middle gear.

Every mile of the route, except from the summit of Mow Cop to Rudyard, was covered, but the fifth day finished the trials so far as the Triumph was concerned. I have no doubt, however, that it would have lapped at Brooklands at well over the required speed of its class. W. N. G. Phillips, a genuine private owner who spent the first week of his holiday winning a gold medal on a similar machine, averaged 49.7 m.p.h. on the track without opening out fully; and,



Mrs. Knowles, the lady A.J.S. gold medallist, was one of those who were never afraid to get well ahead of time. At the commencement of Rosedale Abbey Bank she was twelve places up on starting order—and that after many miles of 15 m.p.h. section.

Following the Blue Trail.—

ever since I discovered a plug—a 15s. K.L.G.—that stands up to the task, I have usually been able to send my own Bonniksen needle well past the sixty mark for quite considerable spells.

Accommodation Difficulties.

On the whole, the organisation of the event itself was quite good, although it was not courting popularity to mention the Scottish Six Days Trials to an A.C.U. official! The hotel arrangements, particularly at Shrewsbury and Llandrindod Wells, on the other hand, were not all that could be desired. Billeting-out may have been unavoidable, but many of the competitors felt that they were paying too much for the privilege of sharing towels, and so on. The man who said that there were too many officials was probably not very far off the mark.

I used neither Jackson's Impervo nor Miracle Oil, and in this respect I may have been at a disadvantage to the great bulk of the competitors. But although I found a large hairpin embedded in my rear tyre on Wednesday morning—and the tyre itself has done a strenuous 4,000 miles, during which a rear brake block was worn to uselessness—I had no tyre trouble; and, after many sooted plugs on Monday and Tuesday, I effected a cure by cutting down the oil and declutching on steep descents. Incidentally I found that Wakefield's X.L. oil suits the Triumph engine admirably. Fuel consumption for the whole trip averaged well over 90 m.p.g.

Ground Clearance and Riding Position.

Only two faults on the part of the machine call for ventilation. (1) The crank case clearance is inadequate. At the same time, one may ground regularly a dozen times a day without doing the slightest damage—if permanently bowed footrests are excepted. (2) Previously I had considered the riding position as ideal—certainly the steering is superb—but after five days in the saddle I am forced to the conclusion that the handle-bars are either too far forward or of the wrong shape for continued comfort—if not for controllability. At the finish my right wrist and left arm both ached slightly.

These, however, are not important points when considered beside the real comfort of the machine as a whole.

Beyond adjusting the push rods three times and cleaning the plug once or twice I had no occasion to open the toolbags during the whole trip. Excepting perhaps R. M. Knowles' Norton, the Triumph was the only machine connected with the trial that reached the finish without attention from oilcan and cleaning rag. And it does not appear to be much the worse for that!

TANGENT.

OVER THE ROOF OF SCOTLAND.

Historical Facts Concerning Communications in the Highlands; General Wade's Military Roads Across Mountains and Moors.

By E. M. WRIGHT.

IF you follow the popular belief and accuse your Scottish acquaintance of a lack of sense of humour he may retort that "his jokes are not yours—that's all." More probably he will just chuckle; certainly he will if he is an official of the Edinburgh Club. For *hoc genus omne* has the real sense, very highly developed, and I believe I have found out why.

More than half the chief (you could hardly call them "main") roads in the Highlands were made in the seventeen-thirties by General Wade, of useful if not pious memory—as true an Englishman as ever carried all before him in the land of the heather. The Ordnance Survey map has each of them marked, good and strong, not merely as "military road," but "General Wade's military road"; like that, as though to rub it in. (Bartholomew's, made in Edinburgh, are strangely careless on this point.)

Not for Speed and Comfort.

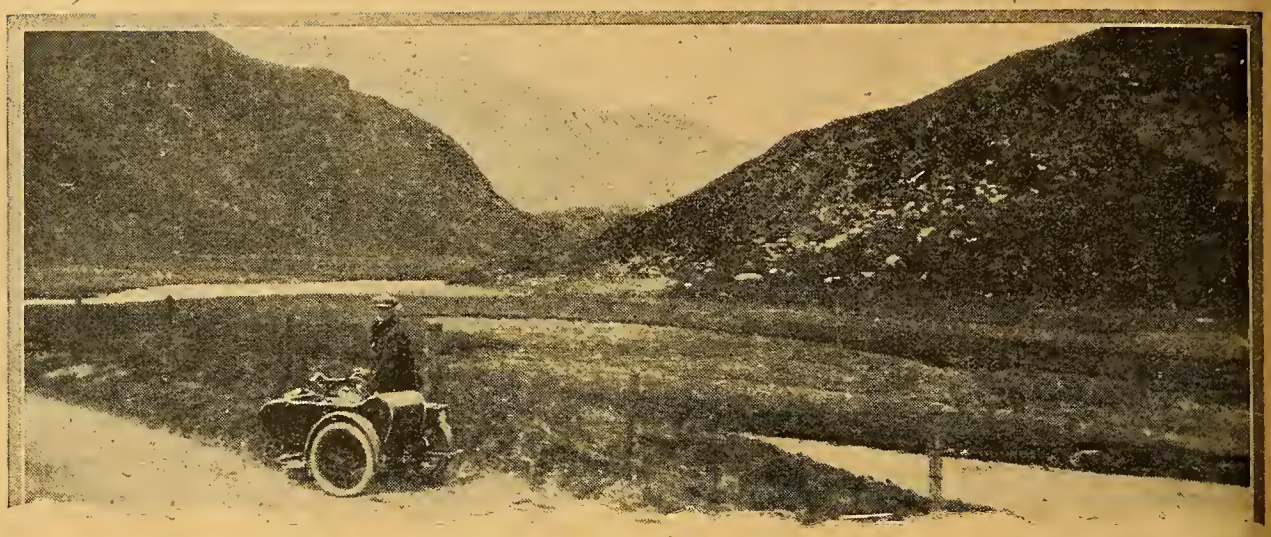
They are good roads in the broad engineering sense. Old man Wade knew his job, and was far from blind to the scenery. (Was it not he who opened up the grand pass of Sma' Glen—who showed us where to get the best view of Glencoe . . . .?) But, oh—the detail work! To describe it as "painfully" crude is but literal truth. These surfaces were never designed for pleasure-seekers—never built, be sure, for either speed or comfort. And it is over General Wade's *English-made* military roads that the Edinburgh clubmen drag their string of Sassenachs every season. Theirs is surely what one might call an historical sense of humour.

Mysterious sounds heard "off," for instance, on the moors between Rinloon and Tomintoul, should not be mistaken for the grouse or partridge of that region. They are the extra deep chuckles, I firmly believe, of some Edinburgh men in a secret check by the roadside. For this vile stretch of cross-gullied mountain track is one of the most typical pieces of General Wade's work—difficult enough to "sit" in peace-time, so to speak, without any thought of time-keeping.

The Roof of Scotland.

This has been called the Roof of Scotland, from Glenshee, where, on a shoulder of the Cairnwell, the road rises to 2,200 feet, to Tomintoul, with minor "humps" between Balmoral and Rinloon, Rinloon and Crathie, Cockbridge (properly called Allargue), and Tomintoul. Above the Cockbridge Ladder, the upper-middle stretches of which are not unlike Trinafour, the road rises to 2,090 feet, and I would rather climb fifty ladders than have to make up time on the loose and steep descent beyond.

The Roof of Scotland describes more than a semi-circle round the Cairngorms. It is always some comfort, one likes to feel, to the dazed and dithering rider on this stretch, to remember that for thousands of local motorists it is the only road from the Dee and Don



Sma' Glen through which competitors in the Scottish Two Days Trial return. It is said to have been the first road General Wade made in Scotland.

valleys and the country south-east of them, to Grantown and Inverness, unless a *détour* half the breadth of Scotland be undertaken. A magnificent range like the Cairngorms has its disadvantages.

On next Monday, in the Scottish Two Days Trial, there is Inverfarigaig. This is not a hill in the sense of a climb; the "ascent" of it is much more like stunting round the paths in one's back garden.

Inverfarigaig itself resembles a miniature imported from the south of France—high cliffs hung with silver birches to their very summit, and a deep gorge between. The "corkscrew" is a series of five narrow terraces, exactly reminiscent of a cliff promenade in sunnier climes, each joined to the next by a *very* sharp turn indeed. The length of each terrace is not much more than thirty yards, if that, and it has no gradient in itself; but as the whole promenade is set on the face of one of the cliffs overhanging the gorge, the whole sting of the hill to the motor cyclist lies in its hairpins.

Here too, on Monday, there are bound to be some historical chuckles, for it was down the gorge of Inverfarigaig that Prince Charlie himself came hurrying on his flight from Culloden Moor.

As a hill-climb, pure and simple, Kenmore will probably prove the test piece. They have been cutting wood and carting lumber on its sacred slope this summer, and I leave to the imagination what that means to a road so shut in by trees and so well-softened by the local climate! Then the lumber-men have been making a road for themselves straight down the hillside, regardless of its gradient, to the mill below. If it is in use, why shouldn't the club use it? Its sense of humour is very adaptable.

WARNING FROM SCOTLAND.

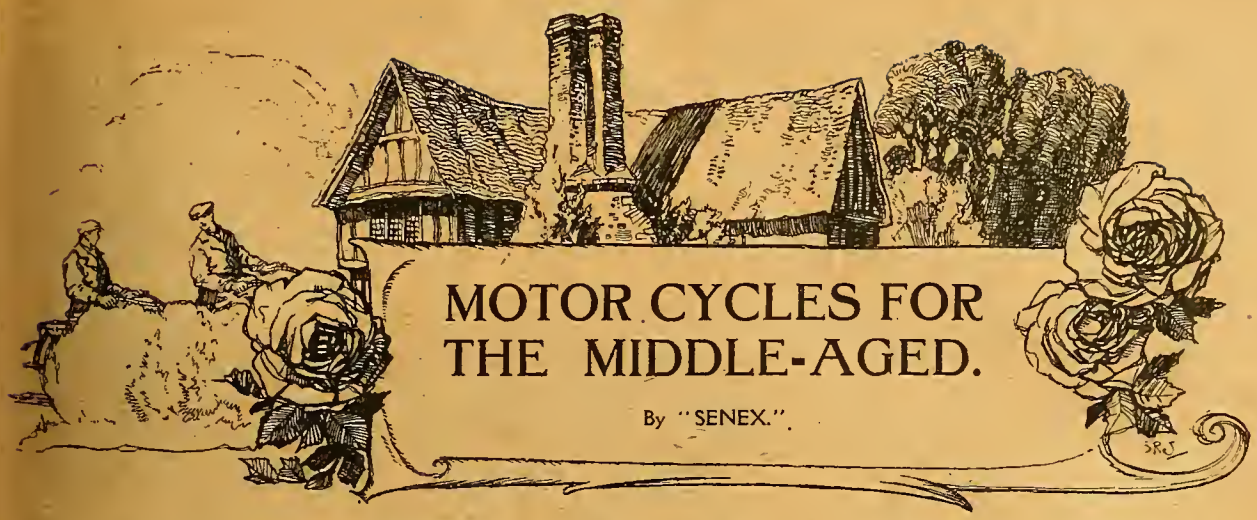
A WARNING in regard to the number of avoidable accidents that occur on Scottish roads, due to inconsiderate driving, has been issued by the Scottish Section of the Automobile Association. One of the principal causes of such accidents, it is stated, lies in the tendency of drivers to accelerate unduly when ascending inclines, beyond the crown of which the road is invisible. Tourists, particularly in the far north, should realise that where the roads are narrow and visibility is limited, great caution should be observed when rounding corners, and the correct side of the road should be strictly kept; the tendency to cut corners is too prevalent.

Considering the disinclination of chief constables throughout Scotland to take drastic action, it is incumbent upon motorists to endeavour, by taking ordinary care and precaution, to obviate the necessity of a large increase being made in the number of controls already in operation. It would be a pity if the Scottish police became anti-motorists.

IMPROVING THE ROADS.

SCHEMES for carrying out urgently needed road improvements are being prepared by the R.I.A. for submission to the local authorities and to the Ministry of Transport. The Ministry has lately invited local authorities to create schemes of road work to provide employment during the coming winter.

The roads it is proposed to deal with first are the London-Brighton road, the London-Eastbourne road, the Bath road, the Warrington-Carlisle road, and the Leicester-Coventry road. Part of the schemes involve improvements to the roadside, by voluntary effort, such as cutting hedges, removing unsightly hoardings, weeding and cleaning out stagnant pools. Those desirous of bringing particular information before the R.I.A. relative to these matters should communicate with Mr. Wallace E. Riche, General Secretary to the Roads Improvement Association, 15, Dartmouth Street, Westminster, S.W.1.



MOTOR CYCLES FOR THE MIDDLE-AGED.

By "SENEX."

Present Day Machines Criticised by a Rider who is No Longer Young. Suggestions and Improvements Required for those who value Comfort, Silence and Cleanliness.

Motor cyclists who retain the priceless possession of youth are apt to regard efficiency and speed as the Alpha and Omega of motor cycle performance. Himself a sidecar owner, attracted by the motor cycle's economy, "Senex" discusses in what way the average machine falls short of the needs of a great body of men and women who are not interested in the sporting side of the motor cycle movement. This body of potential motorists needs economical machines but is attracted by the silence and easy starting of the small car and the apparent comfort of the cycle car. Can manufacturers of sidecar outfits give them the same refinements in an inclusive self-contained machine?

DURING the last year or two a new class of motor cyclist has appeared.

Professional men with small incomes, pensioned members of the Services, and so on, who formerly looked to a pony and trap, or even a small car, for means of locomotion, have turned their attention to the motor cycle, especially in its passenger-carrying capacity.

To a number of the people who form this class the motor cycle, once the mount of imagined road-fiends, has proved, on closer acquaintance, a veritable godsend; its handiness, power, and general convenience, together with its comparatively low cost, were a revelation.

It must be observed, however, that the middle-aged men—and a few ladies—who mostly represent the new genus have accepted their motor cycles with reservations. The article is a good one, but it is far from perfect. In certain respects, as silence, driver's comfort, complication and starting, although material advances have been made of late, even the highest-grade machines leave something to be desired.

It is well known that *The Motor Cycle* calls attention, in season and out of season, to the existence of weaknesses in design or construction. Moreover, the framers of official reliability trials seldom fail to throw the weight of their authority on the side of reform by, say, penalties for noise, or the like. Nevertheless, the time has come to voice the middle-aged man's view of the situation, because immediate action—in the sense of improvement—is now required. Otherwise, the competition of the small car and cycle car (which offer substantial advantages in comfort) will prove more formidable than ever before.

Mr. J. L. Norton, who handles a sidecar at speeds very few middle-aged men ever attain. He retains his youthful zest, and says that sidecarring keeps him young.

For instance, take the item of silence. Apart from the danger of police interference and the unpleasant sensation of being classed as a road-nuisance, there is the point of view which is fairly represented by the writer's passenger. Nothing will induce her to part with her comfortable sidecar. Nevertheless, she invariably hails

Motor Cycles for the Middle-Aged.—

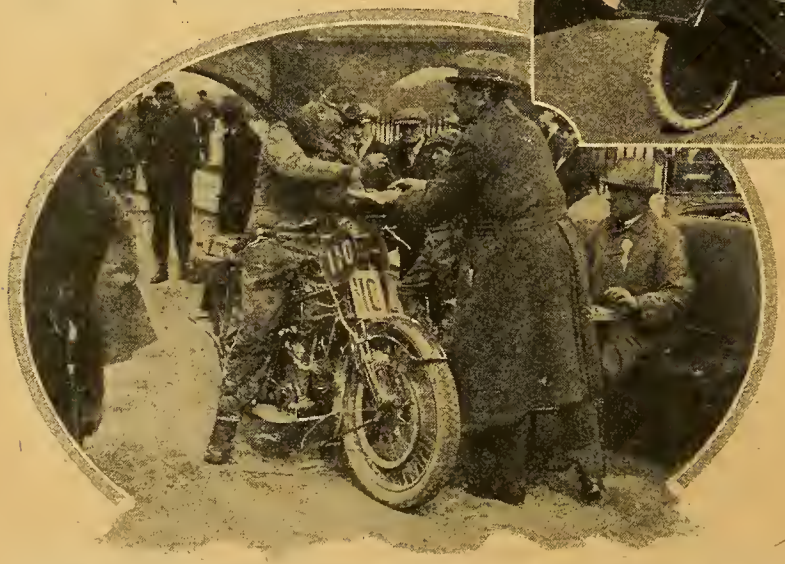
the last beat of the engine with a profound sigh of relief, usually followed by the plaintive query, "When are they going to make motor cycles quiet?" The culprit, be it understood, is no roaring sports single, but a high-priced heavyweight twin.

Surely it is not beyond the wit of man to devise means of silencing both exhaust and engine, so that the passenger may talk to the driver without shouting herself hoarse, or that one may proceed down a quiet street without attracting every householder to the windows? Is this too much to ask?

Again, is the unfortunate driver never to be released from the unsightly goggles, waterproof coat and leggings which he has suffered already too long?

Of course, this part of the problem has been tackled. Front mudguards are deeper, leg shields are beginning to cease to be an extra, and advertisements of handle-bar screens show the trend of ideas. But more is needed.

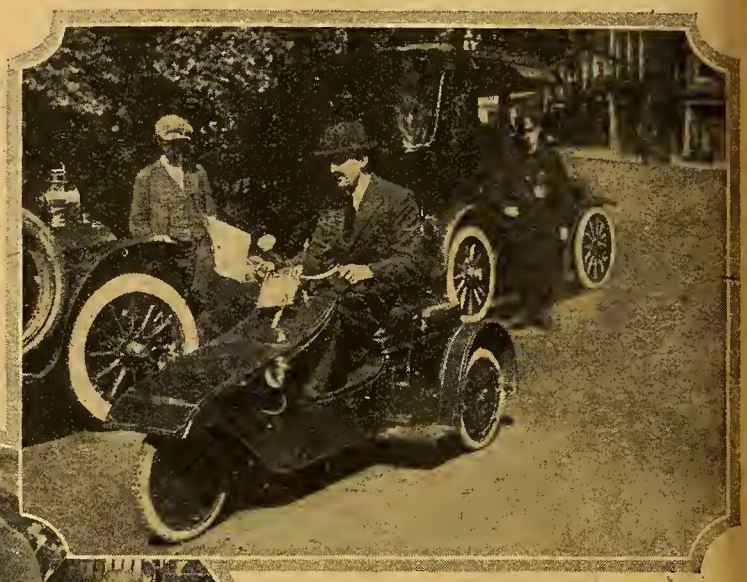
The goal of invention should be a machine so built and provided with protection that a waterproof for actual rain would represent all the special clothing necessary. The elderly man wants to mount his machine in ordinary clothes and travel to his destination with the same absence of fuss and trouble, robing and disrobing, as does his car-owner friend. Perhaps the ideal machine will appear at the next Show. It is time.



Col. McKechnie is a contrast to the middle-aged men who forsake the motor cycle for the car. In his enthusiasm he has designed and marketed a revolutionary springing device, which is probably the most effective that has ever been incorporated on a machine, and on it he competes in many of the big trials.

Next, there is complication of machinery. No one wants to see the mechanism, I assure you. The smooth, clean contours of the car are desired. So long as machines expose their engines, carburetters, and the rest, in the present shameless manner, the car has the best of the argument. Moreover, this exposed machinery is one of the chief sources of the dirt complained of in the foregoing paragraph, to avoid which special clothing is a necessity. It is also a contributory cause of the difficulty in cleaning a motor cycle. Our car friends turn the hose on to their machines at the end of the day's run; we have to spend hours over our work.

A beginning has certainly been made. Enclosed transmission is to be found on many makes, and the advent of one or two special types shows that enclosed mechanism and covered wheels are not necessarily the sole prerogative of the car—all honour to the designers. But more progress is essential. Is it too much to pray for an entirely enclosed big twin? Instant success should be its reward.



A miniature runabout that will appeal to the man who prefers the stability of three wheels and objects to the use of overalls. The Harper runabout, which incidentally seats an extra passenger at the rear, performed well in the Scottish Six Days Trials.

Another point affecting the driver is the springing. Relief from the terror of post-war roads is imperative, and it is not easy for the lay mind to understand why a motor cycle cannot be sprung fore and aft like a car. Difficulties of lateral rigidity are admitted; but are these really beyond the power of the designer to tackle? It is scarcely believable, for there are already spring frames on the market. So why do some of the leading makes stick to the rigid frame?

Starting is yet another item in the list. The spectacle of a respectable middle-aged gentleman, red-faced and perspiring, kicking savagely at an entirely unresponsive engine is one to make the angels weep. It is useless to tell us that this or that dodge will set things right. Starting should be as much a matter of course as it has become on cars. Why should it loom gigantic in motor cycles?

Motor Cycles for the Middle-Aged.—

The sidecar must next be considered. If the passenger is consulted, it will be found that there is not much room for complaint in the best types. But still it may be hinted that passengers are not invariably slim and supple—a trifle more space might be given in many sidecars, also wide-opening doors, lift-up dashes, hoods, and screens should be part of the outfit, not extra, as is often the case with the two latter. Who-ever heard of a car being sold without hood or screen?

Lastly, inasmuch as passenger-carrying capacity is becoming of increasing importance, not only does Paterfamilias want to take out all the olive branches, but Materfamilias not infrequently desires to offer the hospitality of a seat to a friend. Considering all these things, is it not time, if a humble layman may venture a suggestion, to develop the adult two-seater sidecar?

With the modern big twin there is plenty of power, as witness the success of the sidecar taxi in certain centres of population. The sidecar taxi itself is not quite what is required. For, though offering the indispensable comfort of side-by-side seating (your tandem is a hopelessly unsociable expedient), it is too heavy and cumbersome, with its fixed top, for touring and general purposes.

What is required is a light side-by-side two-seater with room for two adults; it must be light and yet strong. Surely herein lies the answer to the cycle car!

360 h.p. AIR-COOLED ENGINE.

A Remarkable Unit which Demonstrates the Great Advance of Air Cooling.

VERY few motor cycle engines have a cylinder bore greater than 86 mm., and the popularity of three- or four-cylinder machines is still delayed by the oft-quoted fear of too much complication and consequent unreliability.

What, then, would the average motor cyclist think if he was put in charge of a huge machine with fourteen air-cooled cylinders each having a bore of 127 mm. (5in.)?

Such a unit has been made for aero work, and it has survived searching tests, including five non-stop runs of 10 hours' duration by the Air Ministry as well as a 70-hours' test by its makers.

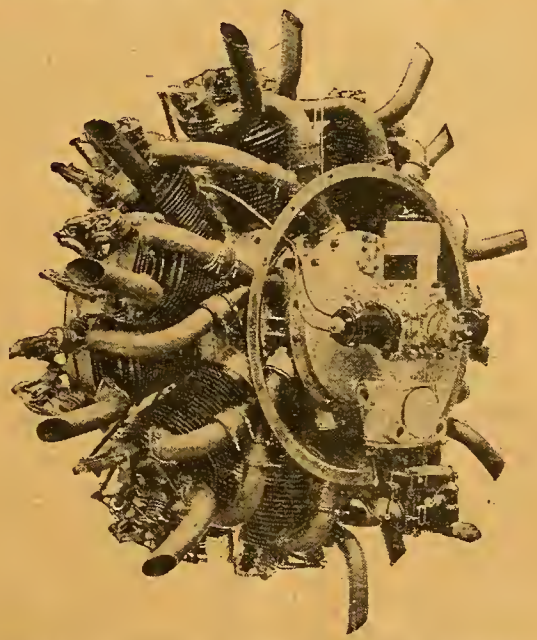
Fourteen-cylinder Radial.

The engine in question is the product of Armstrong-Siddeley Motors, Ltd., Coventry, and is known as the Jaguar. It is of the radial type having two rows of seven cylinders working on a two-throw crank. Six connecting rods of each group are hinged to the big end of the master rod, and light aluminium alloy pistons are attached to the small ends by large but very light floating gudgeon pins. The cylinder barrels are of steel screwed into aluminium heads, each head having an overhead inlet and an exhaust valve working on special bronze seatings.

A dual carburetter supplies the mixture, which is well warmed before reaching the cylinders, and an ingenious distribution system is employed to ensure an equal flow of gas to all cylinders.

Dry Sump Lubrication.

As may be imagined, the lubrication system for such an engine is of the highest importance, and considerable ingenuity has been shown in details; suffice to say, however, that the system, which is of the dry sump type, has proved most satisfactory. To this we can testify, for by courtesy of the manufacturers we have been able to examine every part of a Jaguar engine which had been stripped after 70 hours' test. Even after this gruelling the valves were in excellent order, and there was only a trace of carbon on pistons and cylinder heads, while all working parts were in perfect condition.



There are several features in this fourteen-cylinder Jaguar engine of interest to the motor cyclist of a technical bent.

A few figures will give some idea of the proportions and capabilities of this monster:—

No. of cylinders	14
Bore and stroke	5 in. × 5½ in. (127 × 140 mm. = 24,822 c.c.)
Normal rated h.p.	320
Maximum rated h.p.	360
Normal r.p.m.	1,500
Petrol consumption	0.52 pt. per b.h.p. hr.
Oil consumption	0.03 pt. per b.h.p. hr.
Weight (dry but including carburetter coils, distributors, and propeller boss)	716 lb.
Clear diameter of valves	1.875 in.

The horse-powers as above stated are not, of course, the maximum figures obtainable, and a series of readings to hand show that 372 h.p. can be obtained 1,650 r.p.m., and even higher powers have been obtained.

Road Tests of New Models

The 600 c.c. Flat-twin Sports Humber.

SPECIFICATION.

ENGINE: Flat-twin 75 × 68 m.m. (600 c.c.), detachable valve seats.	*CARBURETTER: Claudel-Hobson, single lever.*	*TYRES: 26 × 2½.*
TRANSMISSION: All chain.	*GEAR BOX: Humber three-speed.*	*WEIGHT: 235 lbs.*
		Price: £100.

WHEN taking over a typical sports solo machine one does not expect to find such a luxury as a kick-starter, nevertheless this invaluable fitting is part of the equipment of the 600 c.c. sports Humber, and it should be added that the starting of this machine is remarkably easy.

Again, the first impression received on the road is of extraordinary flexibility, another feature not usually associated with sports machines. One can crawl along on top gear at a speed but little higher than a fast walk and yet accelerate to a maximum of approximately a mile a minute with no other alteration than a movement of the throttle lever. The carburetter, it should be added, is a car type Claudel-Hobson single lever.

Midland Test Hills.

It is not altogether easy to find a suitable testing ground for a powerful solo machine in the immediate neighbourhood of Coventry, so we bethought us of the standard course employed by *The Motor Cycle* staff when testing pre-war machines. This course, though straightforward, includes several good hills, such as Frizz Hill, Edge Hill, Tysoe, and Sunrising, and provides a sufficiently varied assortment of surfaces to form a good test. Accordingly we set forth on a showery day with the side roads just sufficiently treacherous to test the stability of the machine.

Over main roads to Warwick, Barford, and Wellesbourne the Humber covered the ground smoothly and fast, giving a sense of security on corners due to a low centre of gravity and beautiful steering. The first rise to be encountered was Frizz Hill, which is sufficiently steep and long to test the top gear pulling powers of most touring machines. The Humber, however, slid up fast on a threequarter throttle opening and continued down the corresponding descent past the beautiful grounds of Compton Verney. Down this hill we took the opportunity of testing brakes. The rear brake, operating in a dummy belt rim, is smooth and powerful, but the front brake, of the horse-shoe type, though capable of slowing the machine, will not bring it to a stop on any severe grade. This point, in fact, requires attention, and the present fitting—of a rapidly disappearing type—might reasonably be replaced by something more modern.

At the foot of Edge Hill we took the precaution of adding an additional charge of oil to the oil sump, from which lubricant is circulated by mechanical pump.

Top Gear Hill Climbing.

The surface of the hill was good and dry, and we experienced no trouble in making a comfortable ascent on top gear (this with a ratio of 4.5 to 1 is no mean performance), thence down Sunrising a further excellent brake test, sharp to the left at the bottom, and through the old-world village of Tysoe, thence up the least known hill of the Edge Hill range. Tysoe Hill is a good test, though its deceptive gradient does not

Road Tests of New Models.—

appear to be steep to the eye. Again a top gear ascent was made in spite of the S bend just before the steepest part. Here we stopped for a few moments to admire the view over the surrounding country, the sun came out, and the marvellously clear atmosphere permitted great distances to be seen, though it forecasted further rain. Returning over the same route, Sunrising was used as a second gear test, for, since we had already proved the top gear pulling powers of the engine, we dropped into middle on the right-handed hairpin in order to try the performance on the lower ratios. On a gear of 7.5 to 1 it was possible to accelerate even on the steepest part of the hill, and the engined toyed with the gradient. Middle gear is reasonably quiet, excepting at very high revolutions, when something of a whine procceds from the gear box. As in most flat-twins, the vibration at high speeds was barely noticeable.

Disadvantage of Sports Mudguards.

Throughout the run the Humber was not spared, and on the many open and almost trafficless roads high speeds were attained. Before reaching home rain fell and provided an opportunity for testing the mudguards. We can only say that they are of the usual sporting type, and, though they are fitted fairly close to the tyre and consequently stop a certain amount of wet, they are not very practical from the point of view of cleanliness; where sports models are concerned this is usual, however.

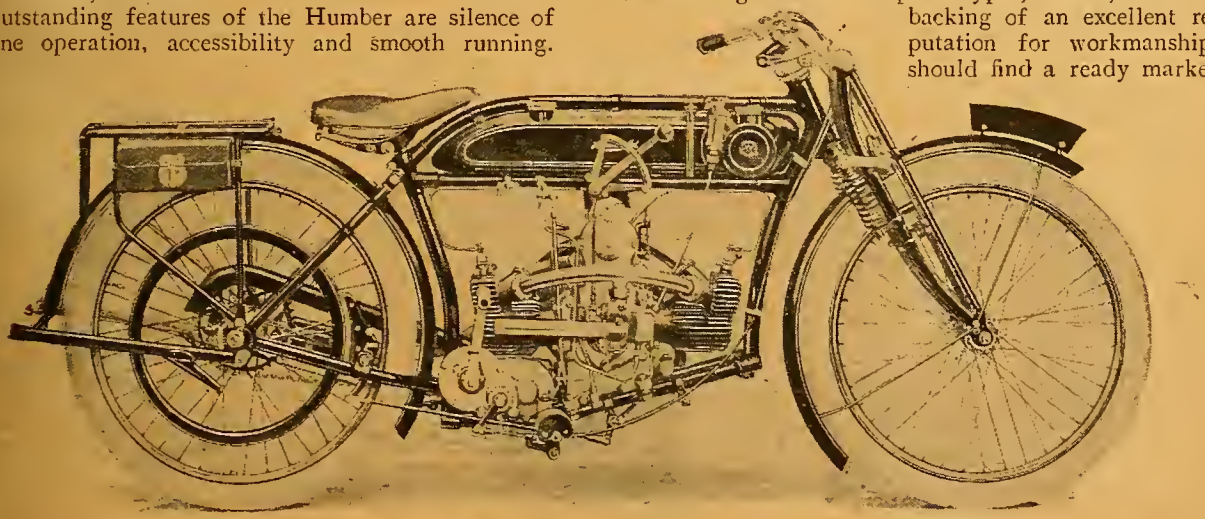
Outstanding features of the Humber are silence of engine operation, accessibility and smooth running. The engine is not vibrationless, but is so comparatively free from vibration that it is far ahead of the normal V twin. The silencing arrangements might be improved, though, in spite of the plain exhaust pipes with fishtail ends, the exhaust note is reasonably quiet until the throttle is more than half-way open.

Detachable valve seatings have long been a feature of the flat twin Humber models, and these, of course, are retained so that the complete valve spring and pocket may be removed for inspection and "grinding in." Oil is pumped from a capacious sump to feed the various bearings, plain split big-ends being employed and lubrication scoops fitted thereto.

Quiet Valve Gear.

The timing gear is quiet and the valve tappets reasonably silent; but without doubt the most striking feature is the wonderful top gear flexibility. So pronounced is this feature that we could not help thinking what a fine single-geared machine, free from the extra weight and complication of gear box, kick-starter, clutch, etc., could be produced using the flat twin Humber engine as the power unit. The suggestion, of course, sounds old-fashioned, and there are but few who would take an interest in such a machine were it produced. Nevertheless the point is worth recording, since it emphasises the wonderful flexibility of the machine.

Altogether the Humber company has a right to pride itself on turning out a useful compromise between the touring and ultra sports types, which, with the backing of an excellent reputation for workmanship, should find a ready market.



A kick-starter, single lever carburetter and mechanical lubricator are none too common on sports models, but these specifications are included in the Humber equipment

COPENHAGEN'S NEW RACE TRACK.

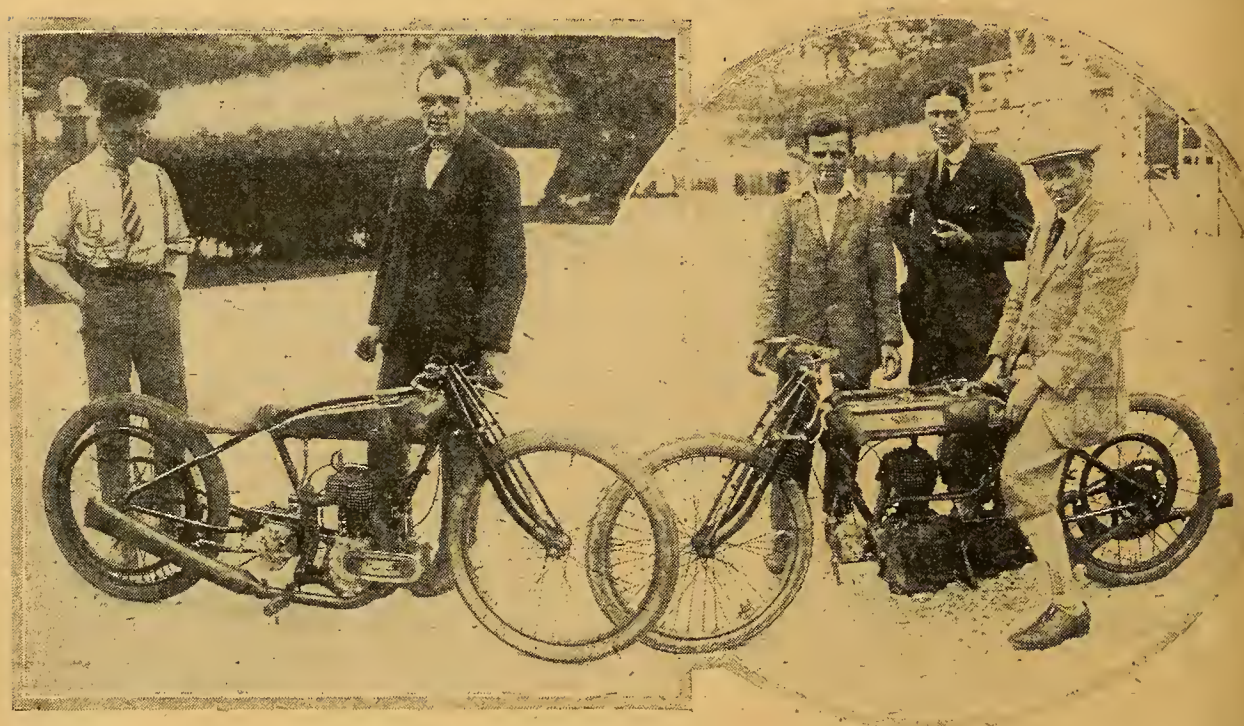
MOTOR racing tracks have recently been built in several places on the Continent. The first to be constructed after the war was outside Berlin; another has just been completed near Copenhagen; and yet a third was lately opened for the Italian Grand Prix in the Monza Park, near Milan.

Apropos of the Danish track, a correspondent writes: "It is 1 mile in length approximately (or 3 laps = 5 kilometres). The surface is good, and an uninterrupted view is obtained right round. Two enormous stands, which will seat several thousand, are nearly completed. There is a fine finishing straight.

"The admittance is 2s. and 3s., 6d. for parking a motor cycle, and 1s. for motor cars, which is reasonable. The track is situated 10 km. from Copenhagen, about 15 minutes by a good train service. Like every other sport here, one can back one's fancy on the totalisator, the profits of which go to the State."

60 M.P.H. FOR 24 HOURS

Double-Twelve Record by a Norton; and Side-Valve O.K.-Blackburne Successes. A New Name on the Record Lists.



W. L. Handley and W. D. Marchant who between them broke records up to 400 miles and 7 hours on the new 250 c.c. side-valve Blackburne-engined O.K.

R. N. Judd, Victor Horsman and D. R. O'Donovan, a trio of Norton exponents who, riding in turns, captured the double-twelve hour record.

THERE has been considerable activity at Brooklands during the last few days. On the 4th inst. Victor Horsman, D. R. O'Donovan, and R. N. Judd, riding a 490 c.c. Norton in turns, captured the double-twelve (at 60 m.p.h.) and other records in addition to those published in last week's issue, which were as follows:

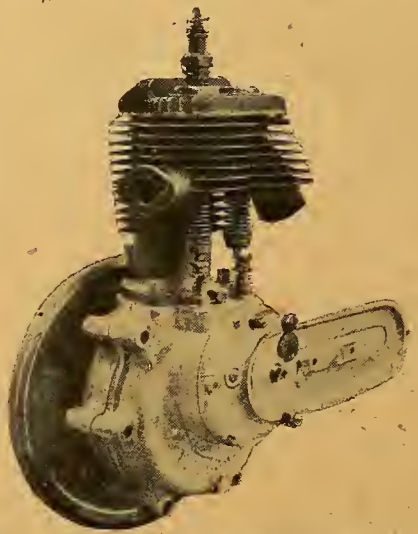
300 MILES.—4h. 47m. 5s. Speed, 62.69 m.p.h.
400 MILES.—6h. 24m. 24s. Speed, 62.43 m.p.h.
500 MILES.—7h. 59m. 40s. Speed, 62.54 m.p.h.
5 HOURS.—314 mls. 194 yds. Speed, 62.82 m.p.h.
6 HOURS.—377 mls. 1,719 yds. Speed, 62.99 m.p.h.

The 600 miles was accomplished at an average speed of 62.05 m.p.h. in 9h. 40m. 9.20s., and the 700 miles at the same speed (time, 11h. 16m. 49.39s.), while in the 12 hours 741 miles 431 yards were covered (61.77 m.p.h., or 99.40 km.p.h.).

A Mile a Minute for 24 hours.

The riders thus succeeded in completing a double-twelve hours record, accomplishing a distance of 1,447 miles 839 yards at an average speed of 60.31 m.p.h.—the first time this has ever been accomplished on a motor cycle. The only troubles experienced were a broken tyre valve in the rear wheel, and numerous broken exhaust valve springs caused by the stripping of the thread of the adjustable tappet.

The 300, 400, and 500 miles and 5 and 6 hours records are in Classes C and D (500 c.c. and 750 c.c.) only, but the latter times also apply to Class E (1,000 c.c.).



Except for its very deep radiating fins and the fact that it has no detachable head the new Blackburne engine is not unlike the existing design.

On the 5th inst. W. D. Marchant and W. L. Handley put up a successful series of records on a 250 c.c. side-valve Blackburne-engined O.K. The ride was started with the idea of carrying on as long as possible, but it was brought to an unlucky end after 400 miles owing to a broken saddle pillar, causing Handley to complete the lap sitting on the tank. They broke the 50 and 100 miles records, which is quite unusual in long-distance attempts, as on these occasions records are not usually attained until after 300 miles or so have been covered.

The following Class A records were beaten:—

Distance.	Time. h. m. s.	Speed. m.p.h.	km.p.h.
50 MILES ...	48 31.96 ...	61.81 ...	(99.47)
100 MILES ...	1 40 33.76 ...	59.66 ...	(96.01)
200 MILES ...	3 31 14.16 ...	56.80 ...	(91.41)
300 MILES ...	5 16 28.54 ...	56.87 ...	(91.52)
400 MILES ...	7 3 27.41 ...	56.67 ...	(91.20)

Time.	Distance. Miles Yards.	Speed. m.p.h.	km.p.h.
1 HOUR ...	61 1,345 ...	61.77 ...	(99.40)
2 HOURS ...	119 729 ...	59.70 ...	(96.07)
3 HOURS ...	175 340 ...	58.40 ...	(93.98)
4 HOURS ...	228 167 ...	57.02 ...	(91.76)
5 HOURS ...	283 1,089 ...	56.72 ...	(91.28)
6 HOURS ...	341 917 ...	56.92 ...	(91.60)
7 HOURS ...	396 1,146 ...	56.60 ...	(91.09)

During the first hour the front fork springs collapsed, and the whole of the remaining run was made with what amounted to rigid forks; the steering, however, was quite unaffected.

RECORD-BREAKING SIDE-VALVE 250 c.c. ENGINE.

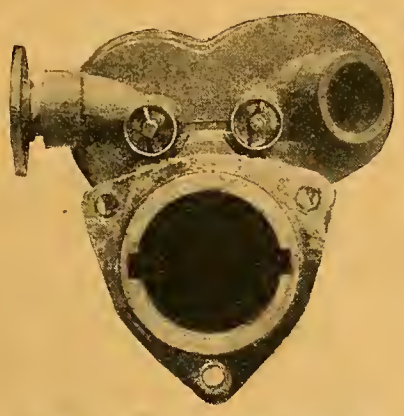
THE Blackburne engine, fitted to an O.K. machine which put up so remarkable a performance at Brooklands last week, departs only very slightly in design from the standard model. It has a bore of 60 mm. with a stroke of 88 mm., giving a cubical capacity of 248 c.c.

Designed for Cool Running.

Externally the engine appears to be large, this impression being strengthened by the unusually generous depth of the cooling fins. These are largely responsible for the coolness which this little unit is proved to be capable of maintaining both on the bench and on the track.

Another departure from standard Blackburne practice is the employment of a one-piece cylinder casting in place of the detachable head construction previously used on both side-valve and overhead-valve models.

As may be seen from the illustration, special care has been taken to facilitate the gas flow, the inlet and exhaust valve orifices being offset approximately $\frac{1}{32}$in. from the valve centre. The valves themselves are $1\frac{7}{16}$in. diameter. The tappets appear slightly offset in this instance, but in the standard models these will be central.



Some idea of the size of the valve pockets may be gathered from this view of the cylinder..

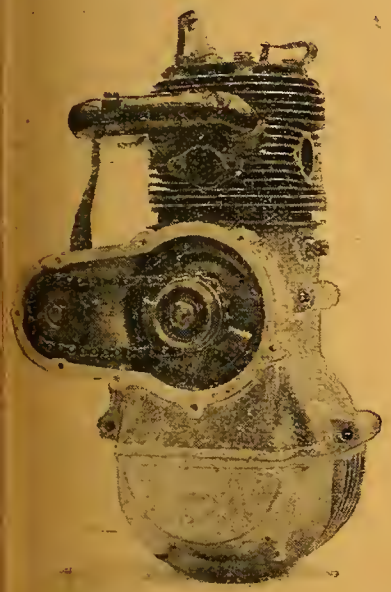
Roller Bearing Big-end.

A roller bearing big-end is used, and the moving parts are sturdy, the usual Blackburne layout of outside flywheel being followed.

Despite the high power output for its small capacity, the little engine showed no sign of distress at the end of its 400 mile run.

SLEEVE VALVE RACING MACHINE.

An Experimental 347 c.c. Barr and Stroud Unit Designed for Maximum Speed and Acceleration.



Side view of the racing Barr and Stroud engine, showing magneto drive and arrangement of ports.

SO much interest has been evinced from time to time in an experimental Barr and Stroud racing engine which has appeared in public on two or three occasions, that we have induced the manufacturers to permit us to publish a few details of the internal construction of this most interesting engine.

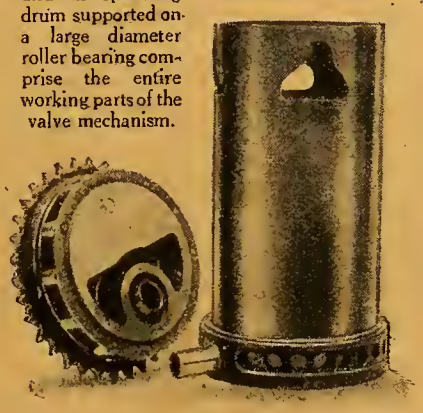
The standard 347 c.c. Barr and Stroud has now become a popular unit with the public on account of its silence and flexibility, and the principle by which its single sleeve valve is operated is fairly well known, therefore it will be necessary only to touch on the difference between the standard and the experimental racing engine. First of all, inside flywheels are employed in the latter unit, and this involves a chain drive to the sleeve operating drum, since the height of the shaft above the crank would necessitate a train of several gears. A second chain from the sleeve operating drum drives the magneto.

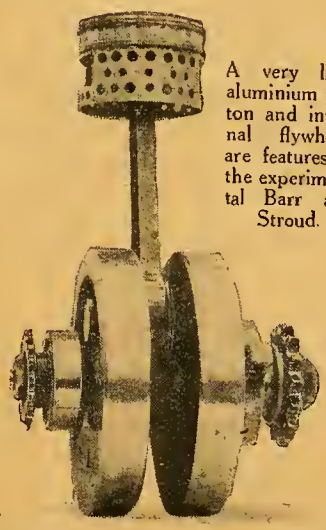
Experiments have shown that these chain drives are thoroughly satisfactory, and after prolonged tests no sign of wear can be detected, a fact which is probably accounted for by the ideal conditions under which the distributing transmission operates.

Special Roller Bearings.

The sleeve operating drum itself is of considerable diameter, and is supported by a special roller bearing on its outer periphery, there being a comparatively small number of rollers equally spaced on supporting rivets. Since the trunnion which engages the sleeve operating pin lies directly within its bearing, rigid support is provided. Similar in principle to the standard type, the sleeve is modified in certain respects, and has four double purpose ports, that is to say, that each port operates both as inlet and exhaust, so that the four sleeve ports serve to open and close four inlet and four exhaust ports in the cylinder casting. A double row of roller bearings is fitted to the big-end bearing, and the gudgeon pin floats in an aluminium alloy piston.

A four-port sleeve and an operating drum supported on a large diameter roller bearing comprise the entire working parts of the valve mechanism.





A very light aluminium piston and internal flywheels are features of the experimental Barr and Stroud.

As in the standard engine, the crankshaft bearings are supported in steel housings bolted to the top half of the crank chamber, which is split horizontally, the base being provided with a number of cooling ribs. The manufacturers express themselves as thoroughly satisfied with the performance of the engine, especially as regards acceleration and maximum speed, which features are chiefly accounted for by the large port area, and the rapid opening and closing obtainable.

Although this promising engine has already performed well in competition work, at the present moment it is not available to the public, since further experimental work will be required before the utmost limit of efficiency can be reached.

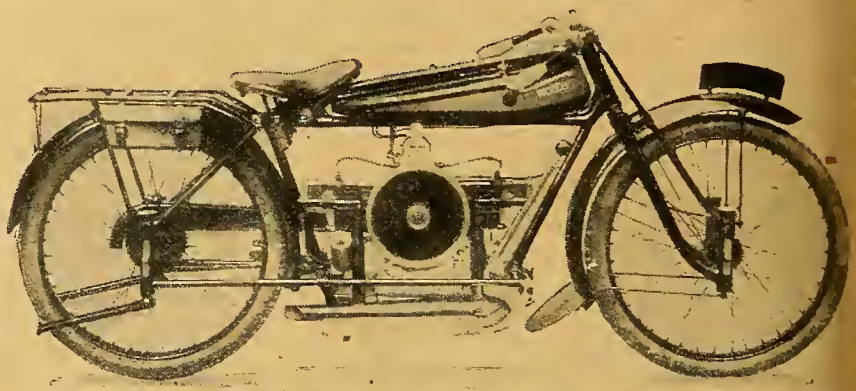
ORIGINALITY IN A 1923 DESIGN.

A Wooler 348 c.c. o.h.v. Sports Engine; and Improvements to the Standard Machine.

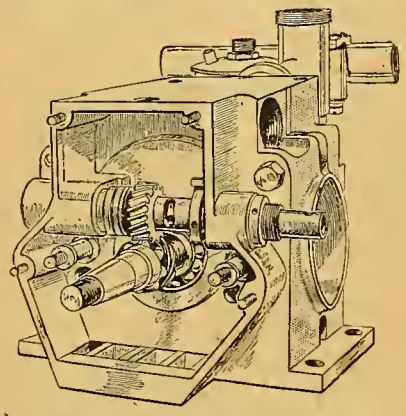
A VISIT to the works of the Dederich-Wooler Engineering Co., Alperton, is on every occasion of an educative and instructive nature. Originality and ingenuity are always present in Wooler designs, and the latest productions are well worthy of careful study.

The 1923 programme of the firm will include a 500 c.c. sidecar model, but at the present moment the popular 348 c.c. type is being concentrated upon, and has now appeared, in a new form, as a sports model.

The engine fitted in this case has been designed for the purpose of attaining high road speeds and will undoubtedly acquit itself well on the track. Having dimensions of 60×60.5 mm., it has detachable cylinder heads, the ports of which are so designed as to give the clearest possible passage for the exhaust and inlet gases. To obtain access to the valves after the cotter and spring have been removed, the guides, which are of ample dimensions, are unscrewed, and a special washer removed, disclosing a slot, provided for the easy withdrawal of the valves, which otherwise could not be taken out at all. The valves are placed at the side of the cylinder head, the inlet above and the exhaust below. For decarbonisation or for access to the valves the cylinder head must be removed. To attach the cylinder head to the main portion of the cylinder an interrupted thread is utilised on the same principle as on the breech block of a gun, the thread on the cylinder head engaging with a similar type of thread cut in a phosphor bronze ribbed ring held on to the cylinder by means of the usual holding down bolts. This casting also forms a portion of the cam case; consequently, once the head is removed, attention may be paid to the valves without interfering with the cam case or the rest of the cylinder.



This illustration shows the pleasing lines of the new 348 c.c. chain-driven Wooler. Note the low saddle position, and conveniently disposed change speed lever on this machine.



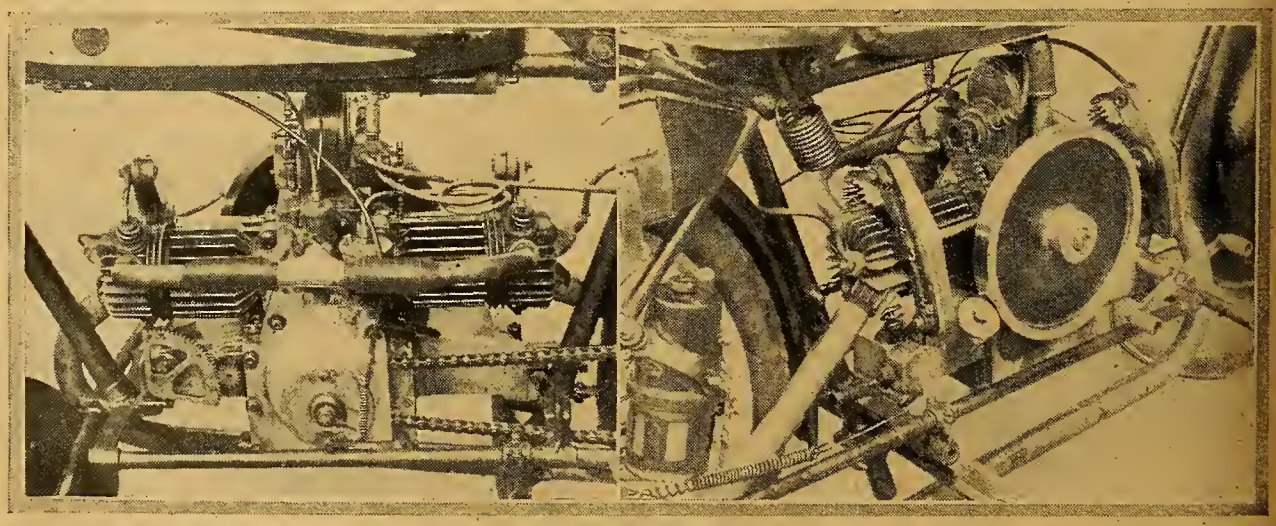
The Wooler sports model crank case, showing the skew timing gear, timed release valve and the hot air intake through the crank case to the carburetter.

Both hollow camshafts are driven by means of skew gearing off the main shaft, the larger skew wheel running on a sleeve in ball bearings. Each end of the sleeve is provided with dogs engaging with the two camshafts. In the sleeve or hollow journal on which the larger skew gear is fitted is a port which is a timed crank case release, and oil forced by the crank case compression passes up the hollow camshafts, lubricating the cams and eventually draining through the bottom of the case back into the main oil sump.

Direct Acting Rockers.

Inside the cam case are two long rocker arms which are actuated by the cams, and on the outer rocker shafts flat surfaces are cut against which the locking screws abut. These screws provide an adjustment which takes up the clearance between valve stem and rocker.

It will be noticed that the C.A.V. magneto is carried transversely on the top



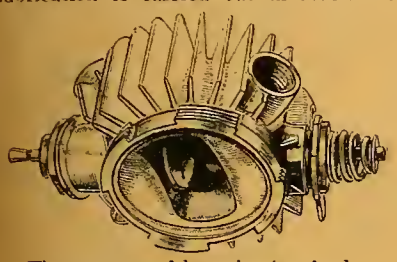
A high efficiency flat twin, the new Wooler with detachable heads in which the valves are situated; the carburetter takes warm air through the crank case casting.

Disposition of the valves and valve gear. As will be seen the valve mechanism is entirely enclosed, and the magneto is placed transversely across the line of the cylinders.

Originality in a 1923 Design.—

of the timing case casting and is driven by chain off the rear camshaft. On future models this chain will be enclosed.

Transmission is by chain from a gear-driven gear box in the crank case. Lubrication is carried out in much the



The sports model combustion head, showing the interrupted thread joint.

same manner as on previous Wooler models of recent construction. Oil is lifted by the gear wheel embodying the clutch into a trough, thus keeping a constant level in an upper sump just sufficiently deep to allow the crank webs to dip into it. These webs are drilled and oil flows up through a specially cut channel to the big-end roller bearings. Above the crank case is an oil breather which discharges surplus oil through a rubber pipe into the top tube of the frame, whence it drains down the down tube and flows back into the sump. Great efforts are being made towards oil economy, and at the present time the consumption varies between 600 and 800 m.p.g., but it is hoped eventually to get as much as 1,000 m.p.g. Half a gallon of oil is carried in the main sump.

Drilled aluminium pistons with slightly domed tops are fitted, the gudgeon pin being held by two spigotted brass discs. Larger gudgeon pins than before are now supplied.

The carburetter takes warm air through the crank case casting.

Considerable improvements have been effected in the standard chain-driven model, which has very pleasing lines. Engine alterations have been in detail only, but important changes have been made in the material. Air-tightness has been ensured in the copper inlet pipes by fitting a cone-shaped felt washer enclosed in a coned copper ring and kept in position by a spring abutting against a shoulder on the inlet pipe. To remove the inlet pipe it is only necessary to undo two nuts on the exterior of the inlet valve gear casing. Incidentally, practically all the nuts on the machine fit one double-ended spanner.

Foot Gear Control Abandoned.

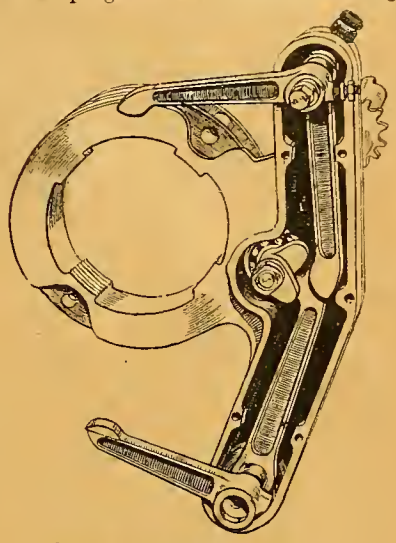
For the first time the Wooler is fitted with girder forks.

Instead of foot control the gear can now be changed by means of a long lever worked by hand; when in the neutral position this lies parallel to the front down tube of the frame. So as to give a lower saddle position the saddle pillar has been abandoned and in its place a special lug has been incorporated at the rear of the frame, to which the saddle is fitted. This also gives a greater clearance, and more play for the springs

The present gear ratios are 5, 8 and 16½ to 1, but the sports model is fitted with a close-ratio gear box. Great improvements have been brought about as regards the mudguarding, the mudguards being wider and an efficient flap being fitted to the front guard in such a manner that it cannot rattle or work loose.

Naturally the Wooler spring frame has been retained, but an improvement has been made in the rear brake, which is now actuated by the rider's left heel.

The tightening of the single chain is quite a simple matter. It is only necessary to loosen the engine bolts and screw up the special adjuster provided, which abuts up against the crank case casting.



Cam case casting showing cams and rockers.

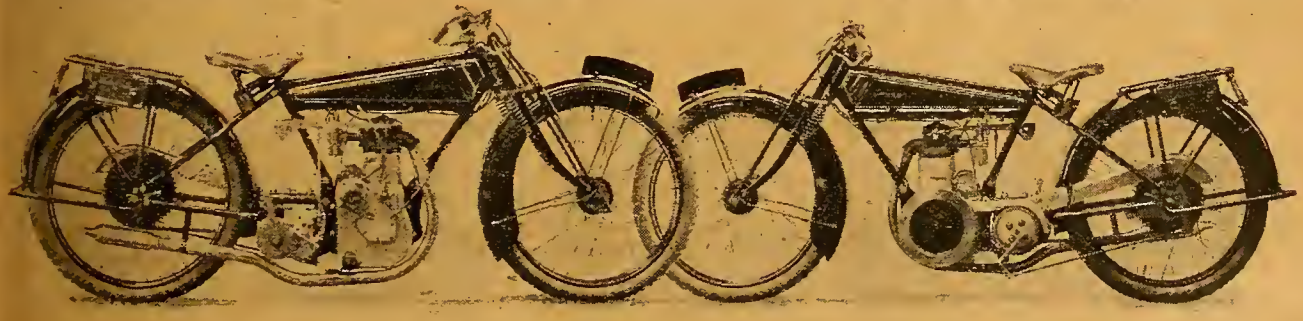
OIL-COOLED SOLO SINGLE.

New Henley Model with 350 c.c. Bradshaw Engine and All-chain Drive.

WHEN many so-called new machines follow such a standard specification that it is difficult to tell one from another except by the colour of the tank, it is a pleasure to come across an assembled machine which has individual characteristics and which without being freakish stands out from the normal run.

Such a machine is the new 350 c.c. Bradshaw-engined Henley, made by the Henley Cycle Co., 18, Doe Street, Birmingham.

The engine is of the latest pattern and is of course oil-cooled, having overhead valves. The principle on which the Bradshaw units are designed has been fully dealt with on more than one occasion in the pages of *The Motor Cycle*, but slight alterations have been made, the most noticeable being a modified exhaust port casting. Transmission is by chain throughout, through a three-speed Burman gear box with clutch and kick-starter; the chains are protected over the upper runs only, but the guards are of cast aluminium and should be considerably less liable to develop rattles than sheet metal protectors. Both brakes are of the internal expanding type, Druid forks are employed, and the rear mudguard is of exceptional width, so wide in fact that the chain and chain guard pass through a slot therein; while the front mudguard, though considerably narrower, is valanced throughout its length. Every detail has been carefully thought out, even to the rubber grips which are supplied on the handle-bars. Our photos show a plain exhaust pipe, but a special silencing arrangement is supplied attached to the end of this pipe so as to reduce noise and comply with the law. The footrests fitted are of considerable width, and the riding position is most comfortable. At £79 16s. this machine is of excellent value, more especially as the price includes 26×2½in. tyres. The finish throughout is excellent, the colour scheme being black and gold.



A new model of particularly attractive specification—the 350 c.c. Henley fitted with a Bradshaw engine.

Along the Mawddach Estuary

An Impression of the Country which, according to John Ruskin, affords One of the Three Finest Prospects in Europe.

By "FRIAR JOHN.

Near the Mawddach Estuary. This illustration shows how photography can, with a wide angle lens in sunless weather, reduce a fine subject to the commonplace.

THE road from Dolgelly to Barmouth has been described by one writer thus: "Dolgelly-Barmouth, 9 miles, rather twisty and narrow in parts." He says also of Snowdon: "To make the tour complete an ascent of Snowdon should be undertaken; a small restaurant is situated at the summit, but best take your food with you."

I forgive this Philistine his dismissal of Snowdon, because each time I have made the ascent rain has fallen heavily. But indifference to that magical bit of road from Dolgelly to Barmouth I cannot forgive. It is a colossal affront to Nature.

A First Impression.

My first impression of this road will never be effaced. After a 200 miles' sidecar run we had reached Dolgelly and were climbing the range of hills overlooking the Mawddach estuary, when suddenly the curtain of mist on our left was torn away. Through the rent we saw the sun gleaming on a vast spread of golden sand. On the foothills below Cader Idris patches of brilliant-coloured vegetation gleamed for a moment like bright enamels, then dissolved away in greyness again. As we ambled along the road to Barmouth the fog rolled down the mountain side and swallowed us once more. For several miles we gingerly felt our way; then suddenly the veil was lifted again. We plunged into a new world, into an atmosphere as clear as crystal, leaving the clouds behind for good. This transformation from grey-green to brilliant sunlight was uncanny and heady. It was like a draught of champagne after a day's forced march in full kit, like ether on an aching tooth. It is a thousand-to-one chance against a similar phenomenon to that described being witnessed again, but even without dramatic lighting effects the beauties of the Mawddach estuary must demand appreciation. Cader Idris (only less by 633ft. than Snowdon), towering over the lower peaks, dominates the estuary, and provides sport as thrilling as can be wished for by the most ardent cragsman.

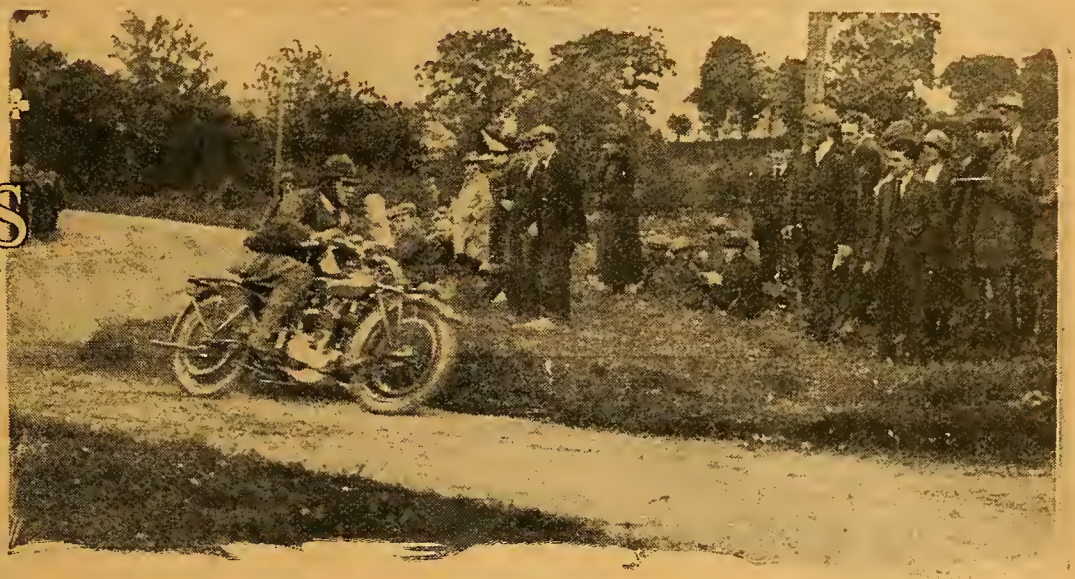
John Ruskin's Opinion.

As Barmouth is approached the Mawddach widens, and unless a stay is anticipated in the district, leave the sidecar just before entering the town and ask the way to the Precipice walk, which overlooks the gulf. The climb will be worth the effort. John Ruskin has left on record in "Modern Painters" that the Mawddach estuary, as seen from Barmouth, affords one of the three finest prospects in Europe. These are bold words. If one is fortunate enough to view it on a clear day, when the west wind sends billowy clouds from Cardigan Bay to cast fleeting shadows on the water and purple mountain sides, then Ruskin's opinion will be upheld. It is a sublime panorama, well worth a fifty mile detour to see.

MOTORISTS COMMON RIGHTS.

THAT a motorist cannot be deprived of his right of access to a common by a local byelaw was shown by the result of a recent case in the Bromley police court. A member of the A.C.U. was summoned by the police for taking his machine on Keston Common at a spot adjoining the Bromley-Westerham road, a favourite rendezvous for motorists. The A.C.U. solicitor, who defended, argued that the particular section of the byelaws under which this prosecution was brought applied only to those portions of the common which have been enclosed for cricket and other games. The court took the same view, and dismissed the case, giving costs (£2 2s.) against the police.

CLUB NEWS



W. P. Metcalfe (976 Brough-Superior) winner of a recent fifty mile race organised by the Belfast and District M.C.C. at Dundonald.

Cardiff M.C.C.

Permission has been obtained to hold speed trials on the promenade at Penarth on the 30th of this month, commencing at 1.30 p.m. Entry forms and other particulars may be obtained from Mr. A. Davies, 91, Penywain Road, Cardiff.

Western Centre A.C.U.

The third inter-team trial for the Western Centre fifty guinea Challenge Cup will take place on Saturday, the 23rd inst., commencing at 2 p.m. Competitors will be required to cover a course of about 17 miles, twice. Rules and other particulars are available from Mr. F. R. Ware, "St. Sidwells," Lutley Avenue, Gloucester.

Aberdeen and District M.C.

G. K. Ferres (349 Massey Arran) carried off the silver rose bowl presented by Mr. Peter Smith for the best performance at the hill-climb which was held on Slins Hill, near Alford, on the 26th of last month. Some good riding was witnessed by the large crowd of spectators. A. Brown (490 Norton) ran a close second.

Westmorland M.C.C.

Results of the speed trials held on the 2nd inst. are now to hand and are given as follows. The event was held at Old Town, near Kirkby Lonsdale, commencing at 4 p.m.:—

275 c.c. (Solo).—J. Atkinson (249 Velocette), 41⅘s.

350 c.c. (Solo).—J. N. Yates (349 Sheffield-Henderson), 35s.

550 c.c. (Solo).—1, B. Hill (481 Scott), 32⅕s.; 2, P. Hoggarth (490 Norton), 33⅕s.

Unlimited (Solo).—B. Hill (481 Scott), 31⅖s.

Unlimited (Solo) Handicap.—1, J. N. Yates (349 Sheffield-Henderson), 34⅗s.; 2, P. Hoggarth (490 Norton), 35⅗s.

Unlimited (Solo) Handicap for Milnthorpe Cup.—B. Hill (481 Scott), 34⅗s., who also made the fastest time of the day on the half-mile incline.

Bradford M.C. and L.C.C.

Bank House Hill, near Pudsey, was the scene of a freak hill-climb for solo machines on Saturday, the 2nd inst. The hill is about half a mile in length, and has an average gradient of 1 in 5, and a large crowd of spectators gathered to see the contest, which was for the Wilson Cup. W. Clough (532 Scott), who carried off the cup last year, was again successful, gaining the full 120 points, and F. Dean (499 Sunbeam) was awarded the gold medal for the second best performance, securing 114 points. Other good climbs were made by E. P. Dodd (492 Sunbeam), T. Bullns, jun. (550 P. and M.), A. Smith (293 New Imperial), R. A. Bonner (500 N.U.T.), and J. Calvert (532 Scott).

Twenty-eight competitors entered for the Priestley Cup reliability trial which was held on the same day over a course of 149 miles in length.

The results of this run were announced as follows:

(1) J. Conchar (10.5 McKenzie car), Priestley Cup. 105 error.

(2) W. Marriott (293 Coventry Eagle), three silver bonnet cups. 108 error.

(3) A. W. Brittain (B.S.A. car), special gold medal. 111 error.

(4) E. P. Dodd (492 Sunbeam), silver medal. 123 error.

Surrey M.C. and L.C.C.

The hill-climb arranged for the 16th inst. has been postponed and speed trials substituted; entries should reach Mr. C. B. D'Anson, Meadow Close, Epsom, not later than to-day.

Clitheroe and District M.C.C.

In spite of the bad weather which prevailed throughout the Captain's reliability trial during the last week-end of August, quite an enjoyable time was spent.

Week-End Club Events.

Sept. 16th.—Surrey M.C. and L.C.C.—Hill Climb.
Sept. 16th.—Dumfries and District M.C. and C.C.—Reliability Trial.

Richmond, Twickenham & District M.C.

It is proposed to organise a motor cycle club for this district at an early date if sufficient support is forthcoming. Persons interested should communicate with Mr. V. F. G. Fowke, c/o Troomes Transport, Edwin Road, Twickenham.

Worcester and District M.C.

In conjunction with the Worcestershire M.C. and the Malverns M.C.C. a run took place to Madresfield Court, Malvern, on Saturday, the 2nd inst., at the invitation of Earl Beauchamp, K.C., patron of the clubs included. Fine weather favoured the event, and a pleasant afternoon was spent inspecting the grounds.

Southport M.C.

Another race meeting is being held on Saturday, the 30th inst., on the sands at Southport, for solo and passenger machines. The last meeting was a great success, over 140 entries being received. It is intended to have 5 mile races for 350 c.c., 500 c.c. and unlimited solo motor cycles. Full particulars can be obtained from Mr. Rowland Hill, 75, Sefton Street, Southport.

East Midland Centre A.C.U.

Normans Hollow, near Mansfield, has been chosen for holding the half-mile flying start hill-climb on Saturday the 16th inst., open to motor cycles and passenger machines. A club team championship, together with the annual reliability trial for the centre premiership, will be held on the last Saturday of the month. The course will be one over which any standard machine should be capable of travelling. Individual entries, club teams, and teams of one make will be accepted.

Wolverhampton M.C.C.

On the Saturday before last members competed in a reliability trial for the "Eric Williams" shield and other awards, with the following results:—

(1) Dr. Harvey (Matchless sc.), "Eric Williams" shield, gold medal, and silver cigarette case. Time, error, 23⅖s.

(2) H. Green (925 Clyno sc.), silver medal. 35⅕s. error.

(3) E. Wheeler (499 Sunbeam sc.), bronze medal. 36⅕s. error.

The Lady's Prize was won by Miss K. Smith (976 Sunbeam sc.), with a total time error of 48⅖s., carrying off the Club silver cup.

Central Cornwall M.C.

Speed trials on Davidstow Moor on Saturday last attracted a large gathering of motorists. The course was a measured half-mile, with a flying start, and between thirty and forty entrants, including cars and motor cycles, were timed electrically by the club's special timing apparatus. The results are as follows:—

350 c.c.: (1) O. G. Whitlock (349 A.J.S.), 33s.; (2) R. Dyer (293 New Imperial), 34⅖s.

650 c.c.: (1) G. R. Symons (499 Sunbeam), 23⅖s.; (2) P. Philips (490 Norton), 27⅕s.

Unlimited: (1) G. R. Symons (499 Sunbeam), 21s.; (2) G. R. Symons (600 Humber), 25⅗s.

The weather was cold but mainly fair.

The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4., and must be accompanied by the writer's name and address.

?0,000 MILES RUNNING.

Sir,—I think that I should be serving a useful purpose in affording motor cyclists my experience in the use of a 550 c.c. Triumph for a period of about two and a half years.

I purchased my cycle in April, 1920, and to date I have completed 19,500 miles, during the whole of which time I have used a sidecar and frequently a pillion seat for a second passenger.

I have completed the whole distance without any trouble beyond the blowing out of a valve cap, which had worked loose, and an occasional punctured tyre. My experience includes a strenuous club trial, which I completed successfully, my only fault being that I arrived in advance of time and was penalised accordingly. I won first prize in a petrol consumption test, with 127 miles per gallon. I followed the Six Days Trials in 1920 with two passengers, and proceeded from Brooklands to Land's End and thence *via* Bristol to Liverpool, covering a distance of 1,475 miles. A fortnight ago I rode to London from Liverpool, with two passengers, in a little over ten hours. On the return journey, at Rugby I experienced my first engine trouble, and I dispatched the cycle and sidecar to Coventry for attention.

The trouble was caused through the shearing of the crank-pin rivets, which necessitated a new piston, main shaft, sprocket, and chain. This was made good by the Triumph Company without charge.

Put shortly, my experience shows 19,500 miles with no frame, engine, magneto, carburetter, or plug trouble. During the whole period I have used two plugs (Lodge waterproof); the first, still perfect, is kept as a spare.

A. D. HARPER.

MAKE BROOKLANDS WORTH VISITING.

Sir,—May I trespass to reply, on behalf of the "motor cycle crowd at Brooklands to "Tangent's" article?

As a reader since 1912, and a regular habitue of Brooklands for the same time, I think I am in a position to take up cudgels on their behalf. At every meeting, car or cycle, you will find the humble motor cyclist *well in evidence*. Brooklands with some folk is almost a religion, and I think with all its shortcomings the "old lump of cement" wants a lot of beating for an enjoyable afternoon's sport.

MATCHLESS.

London, N.16.

Sir,—"Tangent" is, in my opinion, very wide of the mark. The reason why Brooklands is unpopular is simply because of the expense of racing there. A man, before he can enter an event, has to become a member of the club that happens to be running it, which means that to do any racing one has to be a member of six or seven clubs. The average man cannot afford it, and will not run a stunt machine to enter his club's one meet of the year at Brooklands.

What would track racing of the running and bicycling world be if every competitor had to join each club at whose meeting he wished to compete?

NOT A CRACK.

Essex.

SCORING ON THE CORNERS.

Sir,—I was very interested in "Ixion's" remarks on the subject of the Scott Squirrel. I am the owner of a 4-valve Triumph and a Sports Sunbeam, and I pride myself that I am never overtaken on the road. Recently, however, I went for a run on the Sunbeam with a friend who owns a Scott Squirrel. On the straight I reckon that my machine is a good 5 m.p.h. faster than his; but all the same I found that I had the greatest difficulty in keeping up with him, as he could corner at an astounding speed, and although his machine is far lighter than mine it appeared to be glued to the road. At first I thought that my bad riding was the trouble, but later on we changed machines, when I found that corners did not appear to exist.

What is the secret?

J.B.R.

Invergordon.

WHY?

Sir,—I cannot understand why some manufacturers do not study details more than they do.

Why do not all firms fit a spring back stand, as on the Rudge and Norton?

Why do they not fit the change gear lever in a forward position, such as on the 349 c.c. A.J.S. and Sports Sunbeam, so that one can grip the tank with one's knees? Or if the machine is supplied with touring handle-bars, in the middle of the tank, as on the two-stroke James and some of the Rovers?

Why do so many still fit the rim brake instead of a front brake such as on the B.S.A., A.J.S., or A.B.C.?

Why do a large number fit such small tool bags and supply a cheap set of tools on a machine which is looked upon as first-class in other respects?

Why do not all carburetter levers all work the same way?

Okehampton. DARTMOOR.

UPPER-CYLINDER LUBRICATION.

Sir,—The matter of "upper-cylinder lubrication" is exceedingly interesting to me, because the M.A.G. engine has been designed with this end in view As a matter of fact, the upper portion of the cylinder is already in most engines properly cared for from the crank case. The inlet valve and its guide, and the overhead rocker and the push rod guides, are lubricated from the crank case in all overhead inlet valve M.A.G. engines, the oil being drawn up from the crank case, lubricating these parts *on its way into the top of the cylinder*. This system, I might mention, has been well covered by patents.

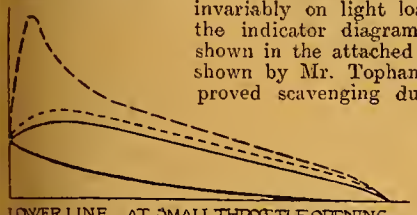
There is no question about the fact that these parts require lubricating, and if it can be done automatically—as is the case with the M.A.G. engine—it means that the engine will last very much longer, and will not require constant adjustment, the carburation is better owing to no air being drawn through the inlet valve guide, and, generally speaking, the engine runs in a very much sweeter and softer manner.

OSBORNE DE LISSA,
Managing Director, The M.A.G. Engine Co., Ltd.

MUSICAL TWO-STROKES.

Sir,—Mr. Topham-Haynes' suggestion, though interesting, is not entirely convincing. I write not in the spirit of idle criticism, but in the hope that he may be able to furnish further evidence on one or two points.

I quite agree that in four-stroking better scavenging occurs than when two-stroking, other circumstances being the same; but is it not the fact that four-stroking occurs almost invariably on light loads? In this case the indicator diagram is rather flat, as shown in the attached sketch, and not as shown by Mr. Topham-Haynes; the improved scavenging due to four-stroking will then raise the pressures to form the dotted diagram herewith. This diagram shows pressures which are still less than those of Mr. Topham-Haynes full-load two-stroking diagram, and thus his explanation appears to fail.



To regard the matter from another point of view, one may safely say that the pressures which occur in a two-stroke motor cycle engine are never as high as those which occur in the four-strokes. The paper by Dr. Lanchester and Mr. Pearsall read last session before the Institution of Automobile Engineers, leaves little doubt on that point. If Mr. Topham-Haynes' suggestion were the true explanation, one might reasonably expect the ordinary four-stroke to emit a similar noise. Actually this does not occur.

In conclusion, may I ask if Mr. Topham-Haynes' diagrams have actually been obtained from a two-stroke engine? If so, was the four-stroking quite normal, or was it artificially produced by some means such as tampering with the ignition? If it was not artificially produced, what caused it on fairly full throttle, as shown by the diagram?

E. P. WILLOUGHBY.

THE NEED FOR CAUTION.

Sir,—I have read with considerable interest "Ixion's" comments on the need for careful driving on holidays.

I returned yesterday from a twelve days' motor cycling tour in North Wales, and, from my experience there, I can substantiate his remarks in every detail. I can truthfully say I have had more "wind up" on this holiday than I had whilst serving for two or three years in a "suicide club" in Flanders. In every case the person responsible was a car driver—more often than not, a Ford merchant. These people seem to think they are the only people on the road, and in the narrow winding lanes near Rhyl, which I made my centre, they drive like veritable maniacs. On at least a dozen occasions I have been compelled to stop in a hurry because one of these madmen came careering round a corner at a dangerous speed, and without any audible warning of approach.

Regarding motor coaches, I must say that I have met with more consideration from the drivers of these vehicles than from any car drivers I have met. When overtaking one I have invariably been waved on, and when passing one going in the opposite direction I have always been allowed my fair share of the road.

Barnsley. "FAMILY SIDECARIST."

UNSATISFACTORY SILENCE LAWS.

Sir,—I am not a motor cyclist, and abhor a noisy exhaust, but at the same time must say that in my opinion the order regarding silence is being stretched to cover something it does not say.

The Motor Cars (Use and Construction) Order No. 11, 1912, says:—"(7) He shall not use any cut-out . . . which will allow the exhaust gases to escape . . . without first passing through a silencer, expansion chamber, or other contrivance suitable and sufficient for reducing as far as may reasonably be practicable the noise. . . ."

Hence it appears that neither a silencer nor expansion chamber is compulsory, so long as some other contrivance does the work. The wording of the Order seems to imply that so long as you quieten the exhaust the law does not care a brass farthing how it is done, and to talk such nonsense as about not having a silencer on the expansion chamber (a police officer's evidence at the Coventry police court recently) is about as good as talking about a man not having a carburetter on his back wheel brake.

As the question of noise is simply a matter of opinion, the quickest and easiest way would, in my opinion, be to try the machine before the magistrate, due precautions to be taken for no alteration between the time of alleged offence and the official trial. Better still, for a duly appointed official to hear the machine before it goes on the road, and to issue a certificate stating the means by which the requisite amount of silence has been obtained, so as to obviate any question of alteration after the certificate has been issued.

This is only my opinion, and, not being a lawyer, do not advise any motor cyclist to take it as good law.

M. W. DANKS.
